<i>Synopsis</i>	xiii
<i>Acknowledgments</i>	xxiii
<b>1. Introduction</b>	1
1.1. Definition of Framboids	1
1.1.1. Microscopic Size	1
1.1.2. Spheroidal to Sub-spheroidal Form	2
1.1.3. Discrete Microcrystals	3
1.1.4. Equant and Equidimensional Microcrystals	3
1.2. History of Framboid Research	4
1.2.1. Discovery of Microcrystals in Framboids	4
1.2.2. Advances in Microscopy and Understanding Framboid Structure	7
1.2.3. Discovering the Nature of Framboids	11
1.3. Distribution of Framboids	11
1.3.1. Framboid Numbers	11
1.3.2. Distribution of Framboids in Sediments and Sedimentary Rocks	14
1.3.3. Hydrothermal Framboids	17
1.3.4. Cryptic Framboids	18
<b>2. Framboid Sizes</b>	21
2.1. Framboid Size Distributions	22
2.1.1. Log-normal Distribution	22
2.1.2. Framboid Mean Diameters	24
2.2. Measurement Errors	26
2.3. Framboid Sizes	27
2.3.1. Sedimentary Environments	28
2.3.2. Other Environments	31
2.4. Sedimentary Framboids	32
2.4.1. Framboids in Sedimentary Rocks	32
2.4.2. Framboids in Marine Sediments	34
2.4.3. Framboids in Non-marine Sediments	34
2.5. Framboids in Other Environments	36
2.5.1. Framboids in Water Columns	36
2.5.2. Framboid Size-Frequency Distributions and the Oxygenation State of Paleo-Water Columns	37

2.6. Hydrothermal Framboids	39
2.6.1. Mineralized Sediments	42
2.7. Polyframboid Sizes	44
2.8. The Maximum and Minimum Sizes of Framboids	44
<b>3. Framboid Shapes</b>	<b>47</b>
3.1. Spheroidal Framboids	48
3.1.1. Sphericity	49
3.1.2. Deviations from Perfect Sphericity	49
3.2. Ellipsoidal Framboids	51
3.2.1. Ellipsoidal Framboids Produced by Deformation	51
3.2.2. Primary Ellipsoidal Framboids	51
3.2.3. Effect of Gravity on Framboid Sphericity	53
3.3. Faceted Framboids	55
3.3.1. Polyhedral Framboids	55
3.3.2. Framboids with Partial Facets	57
3.4. Polyframboids	60
<b>4. Microcrystal Morphology</b>	<b>63</b>
4.1. Microcrystal Sizes	63
4.2. Numbers of Microcrystals in Framboids	64
4.2.1. Packing Densities	67
4.2.2. Ostwald Ripening	69
4.3. Microcrystal Size and Geologic Age	71
4.4. Pyrite Crystal Habits	71
4.5. Framboid Microcrystal Habits	73
4.5.1. Cubic Microcrystals	75
4.5.2. Pyritohedral Microcrystals	76
4.5.3. Octahedral Microcrystals	78
4.5.4. Higher Order Forms	80
4.5.5. Spheroidal Crystals	81
4.5.6. Hollow Microcrystals	83
4.5.7. Incomplete Microcrystals	86
<b>5. Framboid Microarchitecture</b>	<b>90</b>
5.1. Framboid Sections	91
5.2. Single Domain Microarchitectures	92
5.2.1. Cubic Close Packing	92
5.2.2. Close Packed Spheres	95
5.3. Multiple Domain Microarchitectures	98
5.3.1. Pseudo-icosahedral Domain Structure	99
5.3.2. Other Multiple Domain Microarchitectures	104
5.4. Disordered Framboids	105
5.5. The Microarchitecture of Microcrystalline and Nanocrystalline Pyrite	108

<b>6. The Crystallography of Pyrite Framboids</b>	110
6.1. Pyrite Structure	111
6.2. Framboid X-ray Diffraction	114
6.3. Electron Backscatter Diffraction	119
6.3.1. Accuracy of Pyrite EBSD	121
6.3.2. Framboid Microcrystals Are Single Crystals	122
6.3.3. Microcrystal Orientations	123
6.4. Framboid Crystallography and Self-Organization	125
6.4.1. Origins of Different Crystallographic Orientations of Microcrystals in Framboids	127
<b>7. Organic Matter in Framboids</b>	129
7.1. Framboids as Fossilized Microorganisms	130
7.1.1. Schneiderhöhn's Fossil Bacteria	130
7.1.2. Love's Microfossils	131
7.1.3. Pyrite Precipitation within Prokaryotic Cells	133
7.1.4. Framboids as Fossil Microbial Colonies	133
7.1.5. Framboids as Fossil Giant Sulfur Bacteria	134
7.1.6. Framboids as Fossil Eukaryotic Microorganisms	134
7.1.7. Polyframboids as Steinkerns	137
7.2. Framboidal Organic Matter	141
7.2.1. Framboids and Biofilms	142
7.2.2. Geopolymers and Framboid Organic Matter	145
7.2.3. The Form of Protokerogen	147
7.2.4. Extrusion of Framboidal Organic Matter	148
7.2.5. Epigenetic Organic Matter	149
7.2.6. Composition of Infilling Materials within Framboids	150
7.3. Organic Matter in Framboids	151
<b>8. Framboid Mineralogy</b>	153
8.1. Non-pyritic Framboids	153
8.2. Sulfide Minerals, Other Than Pyrite, in Framboids	155
8.2.1. Marcasite Framboids	155
8.2.2. Greigite, $\text{Fe}_3\text{S}_4$ , Framboids	156
8.2.3. Copper Sulfide Framboids	159
8.2.4. Sphalerite Framboids	161
8.3. Oxide Framboids	163
8.3.1. Magnetite Framboids	163
8.3.2. Iron and Mn (Oxyhydr)oxide Framboids	165
<b>9. Geochemistry of Framboids</b>	169
9.1. Pyrite Stoichiometry in Framboids	170
9.2. Pyrite Composition	173
9.2.1. Trace and Minor Elements in Sedimentary Pyrite	173
9.2.2. Trace Elements in Pyrite in Coal	175
9.2.3. Trace and Minor Elements in Hydrothermal Pyrite	177

9.3. Framboid Composition	179
9.3.1. Trace and Minor Element Compositions of Framboids	179
9.3.2. Trace Element Compositions of Hydrothermal Framboids	187
9.3.3. Sulfur Isotope Compositions of Framboids	187
9.4. Controls on the Trace Element Concentrations in Framboids	189
<b>10. Pyrite Framboid Formation Chemistry</b>	<b>191</b>
10.1. Pyrite Chemistry	191
10.1.1. Pyrite Solubility	192
10.1.2. Pyrite Formation Chemistry	193
10.2. The Polysulfide Reaction	193
10.2.1. Polysulfide Reactants	193
10.2.2. The Polysulfide Reaction Mechanism	194
10.2.3. Aqueous FeS as a Reactant	195
10.2.4. Protonated Iron Sulfide Complexes as Reactants	198
10.2.5. Aqueous Fe(II) as a Reactant	200
10.2.6. Iron Sulfide Minerals as Reactants	203
10.2.7. Nanoparticulate FeS	206
10.3. The H <sub>2</sub> S Reaction	207
10.3.1. The H <sub>2</sub> S Reaction Mechanism	208
10.3.2. Microbial Mediation	209
10.3.3. Iron (III) (oxyhydr)oxide	210
10.4. Pyrite Framboid Syntheses	210
10.4.1. Microframboids and Nanoframboids	216
10.4.2. Microspheres	217
10.4.3. Nanoparticulate Pyrite and Pyrite Clusters	218
10.5. Comparison of the Polysulfide and H <sub>2</sub> S Pathways for Framboid Formation	220
<b>11. Nucleation of Framboids</b>	<b>222</b>
11.1. Burst Nucleation: The LaMer Theory	222
11.2. Homogeneous and Heterogeneous Nucleation of Framboids	223
11.3. Classical Nucleation Theory	225
11.3.1. Critical Supersaturation	226
11.3.2. Surface Energy of Pyrite Nuclei	228
11.3.3. Pyrite Critical Nucleus Size	229
11.4. Framboid Size and Supersaturation	231
11.5. Nucleation of Framboids	232
11.5.1. Heterogeneous Nucleation of Pyrite	232
11.5.2. Nucleation of Pyrite Framboids	234
<b>12. Framboid Microcrystal Growth</b>	<b>235</b>
12.1. Origin of Pyrite Microcrystal Habits	235
12.1.1. Pyrite Surface Energies	235
12.1.2. Spectator Ions and Adsorption	240

12.2. Growth Mechanisms and Microcrystal Habit	241
12.2.1. Screw-Dislocation Growth	241
12.2.2. Surface Nucleation Growth	243
12.2.3. Crystallization by Particle Attachment (CPA)	244
12.2.4. Ostwald Ripening	245
12.2.5. Interrelationship between Monomer Attachment, CPA, and Ostwald Ripening	246
12.2.6. Supersaturation and Pyrite Framboid Microcrystal Growth Forms	249
12.3. Origin of Framboid Sizes and the Rate of Pyrite Framboid Formation	250
12.3.1. Crystal Size Distribution (CSD) Theory	251
12.3.2. Diffusion-Controlled Growth	252
12.3.3. The Rate of Pyrite Framboid Formation	253
12.3.4. The Rate of Polyframboid and Framboid Cluster Formation	256
12.4. Molecular Mechanism of Pyrite Crystal Growth	257
12.4.1. Effect of Temperature	258
12.4.2. Effect of pH	260
<b>13. Framboid Self-Assembly and Self-Organization</b>	<b>262</b>
13.1. Self-Assembly: The DVLO Theory	262
13.1.1. Hamaker Constant	265
13.1.2. Electrostatic Interactions	265
13.1.3. The Debye Length and Microcrystal Self-Assembly	266
13.1.4. Pyrite Surface Charge	268
13.1.5. Net DVLO Forces in Pyrite Framboid Self-Assembly	269
13.2. Self-Organization	271
13.2.1. Organic Templates	272
13.2.2. Spatial Constraints: Coacervates	272
13.2.3. Spatial Constraints: Sediment Pores	273
13.2.4. Topotactic Solid Phase Transformations	275
13.2.5. Compaction and Dewatering of Sediments	276
13.2.6. Microcrystal Alignment by Epitaxial Growth and Secondary Nucleation	276
13.3. The Self-Organization Process in Framboids	277
13.3.1. The Development of Framboid Shapes	278
13.3.2. The Development of the Framboid Microarchitecture	280
<i>List of Symbols and Abbreviations</i>	283
<i>List of Units</i>	287
<i>Glossary</i>	289
<i>References</i>	301
