1 Fundamentals	2	2 The language of organic chemistry	70
Making substances: keeping ahead in the fight against bacteria	2	Designer medicines for treating high blood pressure: an ACE approach	71
Carrying out measurements and mathematical modelling: studying the atmosphere	3	What's in a name?	71
1.1 Chemistry: the central science	4	2.1 Why are organic compounds important?	72
Box 1.1 The hundred thousand genomes project	5	Box 2.1 Friedrich Wöhler: first synthesis of a naturally occurring organic compound	73
1.2 Measurement, units, and nomenclature	7	Box 2.2 Some landmark laboratory syntheses of natural products	74
1.3 Atoms and the mole	12	2.2 Drawing organic compounds	75
Box 1.2 Mass spectrometry	14	2.3 Carbon frameworks and functional groups	79
Box 1.3 The Amesbury Archer	17	2.4 Naming organic compounds	81
1.4 Chemical equations	21	2.5 Hydrocarbons	81
Box 1.4 Atom efficiency and green chemistry	26	Box 2.3 Alkyl group substituents	83
1.5 Working out how much you have	35	Box 2.4 Is butter healthier than margarine?	88
Box 1.5 Measuring low concentrations: parts per million	36	2.6 Functional groups containing one or more heteroatoms	92
Box 1.6 Measuring dissolved oxygen in river water	39	Box 2.5 The DDT dilemma	93
1.6 Energy changes in chemical reactions	42	Box 2.6 An organic work-up	96
Box 1.7 Potential energy and kinetic energy	43	Box 2.7 Pain-killing alkaloids	99
Box 1.8 Enthalpy and internal energy	44	2.7 Functional groups containing carbonyl groups	100
Box 1.9 Butane hair stylers	46	Box 2.8 Sulfonic acids and related compounds	103
1.7 States of matter and phase changes	48	Box 2.9 An artificial sweetener	106
Box 1.10 Phase changes of water	51	2.8 Naming compounds with more than one functional group	108
1.8 Non-covalent interactions	53	Concept review	110
Box 1.11 Why is Kevlar ³ so strong?	56	Questions	111
1.9 Chemical equilibrium: how far has a reaction gone?	58	Online resources	115
Box 1.12 Connecting equilibria and cave chemistry	60	
Concept review	66	3 Atomic structure and properties	116
Key equations	67	The Periodic Table	117
Questions	67	3.1 The classical picture of the atom	118
Online resources	69	3.2 Electromagnetic radiation and quantization	121
		Box 3.1 Radiation from the Sun	123
		3.3 Atomic spectra and the Bohr atom	128
		Box 3.2 Lighting up the sky	132
		Box 3.3 The composition of stars	134
		3.4 The nature of the electron	135
		Box 3.4 Electron microscopy	137
		3.5 Wavefunctions and atomic orbitals	139
		Box 3.5 The p orbitals and complex numbers	146
		Box 3.6 The shapes of the d orbitals	147

3.6	Many-electron atoms	148	Box 5.3	The fluorinating ability of ClF_3 and BrF_3	233	
	Box 3.7	Electron spin resonance spectroscopy	150	Box 5.4	Nitrates in water	236
	Box 3.8	Exchange energy	152	5.3	Bond polarity and polar molecules	239
	Box 3.9	Atomic numbers and X-ray spectroscopy	154	5.4	Valence bond theory for polyatomic molecules	240
3.7	Atomic properties and periodicity	158	Box 5.5	Ethene and the ripening of fruit	244	
3.8	Nuclear chemistry	164	5.5	Resonance	247	
	Box 3.10	Dating the past	166	5.6	A molecular orbital approach to the bonding in polyatomic molecules	250
	Box 3.11	Smoke detectors	168	5.7	Partial molecular orbital schemes	253
	Concept review	169	Box 5.6	Boron hydrides	256	
	Key equations	170	Concept review	256		
	Questions	170	Questions	257		
	Online resources	171	Online resources	257		
.....						
	4 Diatomic molecules	172	6 Solids 258			
	Molecules in space	173	Zeolites			259
4.1	Features of diatomic molecules	174	6.1	Covalent network structures	261	
	Box 4.1	How can we measure bond lengths?	176	Box 6.1	Graphene, nanotubes, and nanotechnology	262
4.2	The Lewis model	177	Box 6.2	Superconductors	265	
	Box 4.2	Magnetic behaviour	180	6.2	Structures based on the packing of spheres	266
4.3	Electronegativity	181	6.3	Metallic bonding	277	
4.4	Valence bond theory and molecular orbital theory	182	6.4	Structures of compounds	280	
4.5	Valence bond theory	183	Box 6.3	X-ray crystallography	281	
	Box 4.3	Molecular wavefunctions for H_2	184	Box 6.4	Self-cleaning windows	286
	Box 4.4	Making an unreactive molecule react	186	Box 6.5	Conflict minerals	288
4.6	Molecular orbital theory	188	6.5	The ionic model	289	
4.7	Molecular orbitals in hydrogen (H_2)	188	6.6	Calculating lattice energy	296	
	Box 4.5	Linear combinations of atomic orbitals	192	Box 6.6	Determining the Madelung constant	297
4.8	Molecular orbital energy level diagrams	192	Box 6.7	Defects	301	
	Box 4.6	The formation of hydrogen molecules in space	194	6.7	Predicting bond types	302
4.9	Linear combinations of p orbitals	197	Concept review	304		
4.10	Bonding in fluorine (F_2) and oxygen (O_2)	200	Key equations	304		
	Box 4.7	Oxygen in the atmosphere	202	Questions	304	
4.11	s-p mixing	204	Online resources	305		
	Box 4.8	Measuring the energies of molecular orbitals	204		
	Box 4.9	The colours of the polar lights	207	7 Acids and bases	306	
4.12	Heteronuclear diatomics	209	Acids and bases in the garden			307
	Box 4.10	Linear combinations of atomic orbitals in LiH	211	7.1	Brønsted-Lowry acids and bases	308
	Box 4.11	Using nitrogen monoxide to send biological signals	216	Box 7.1	Solvation	309
	Concept review	217	Box 7.2	Acids, alkalis, and human tissue	311	
	Key equations	217	7.2	The strengths of acids and bases	312	
	Questions	217	Box 7.3	Acidic water in disused mines	316	
	Online resources	219	Box 7.4	Controlling pH in a swimming pool	321	
.....						
	5 Polyatomic molecules	220	7.3	Buffer solutions	323	
	Xenon compounds	221	Box 7.5	Buffering in the blood	325	
	Box 5.1	Representing structures	222	7.4	pH changes in acid-base titrations	326
5.1	The Lewis model	223	7.5	Indicators	331	
	Box 5.2	N_2O : from laughing gas to dragsters	225	7.6	Oxoacids	334
5.2	Valence shell electron pair repulsion theory	227	7.7	Acidic and basic oxides	338	
			Box 7.6	Cooking with acids and bases	338	

7.8	Lewis acids and bases	340
	Box 7.7 Superacids	341
	Concept review	342
	Key equations	343
	Questions	343
	Online resources	345

8 Gases 346

	Breathing under water	347
8.1	The gas laws: an empirical approach	349
8.2	Using the ideal gas equation	353
	Box 8.1 Car air bags	357
8.3	Mixtures of gases	359
8.4	Kinetic molecular theory and the gas laws	362
	Box 8.2 Calculating the pressure of a gas from the kinetic theory	364
8.5	The speeds of molecules in a gas	366
	Box 8.3 Measuring the distribution of speeds in a gas	368
	Box 8.4 Enriching uranium: a practical application of effusion	371
8.6	Real gases	376
	Concept review	382
	Key equations	382
	Questions	382
	Online resources	385

9 Reaction kinetics 386

	Methane in the troposphere	387
9.1	Why study reaction kinetics?	388
9.2	Defining the rate of a reaction	388
9.3	Monitoring the progress of a reaction	391
9.4	Elementary reactions	393
	Box 9.1 Deriving the integrated rate equation for a first order reaction	397
	Box 9.2 Deriving the integrated rate equation for a second order reaction	398
	Box 9.3 Atmospheric lifetime of methane	404
	Box 9.4 Using flash photolysis to monitor ClO [•] radicals	407
9.5	Complex reactions: experimental methods	409
	Box 9.5 The stopped-flow technique	410
	Box 9.6 Deriving the integrated rate equation for a zero order reaction	414
	Box 9.7 Pharmacokinetics	415
9.6	Complex reactions: reaction mechanisms	419
9.7	Effect of temperature on the rate of a reaction	428
9.8	Theories of reactions	434
9.9	Catalysis	438
	Box 9.8 The Michaelis-Menten mechanism	440
	Concept review	442
	Key equations	442
	Questions	443
	Online resources	447

10 Molecular spectroscopy 448

	Searching for life on Mars	449
10.1	Introduction to molecular spectroscopy	450
10.2	Molecular energies and spectroscopy	453
	Box 10.1 Particle in a one-dimensional box	454
10.3	General principles of spectroscopy	458
	Box 10.2 Lasers	464
10.4	Rotational spectroscopy	466
	Box 10.3 Using rotational spectroscopy to monitor ClO [•] radicals in the atmosphere	474
10.5	Vibrational spectroscopy	476
	Box 10.4 The simple harmonic oscillator model for a diatomic molecule	479
	Box 10.5 Atmospheric concentrations of carbon dioxide	485
	Box 10.6 Degrees of freedom and normal modes of vibration	486
10.6	Electronic spectroscopy	491
	Box 10.7 Electronic spectroscopy and colour	491
10.7	Spin resonance spectroscopy	496
	Box 10.8 Spin-spin coupling in NMR spectra	503
	Box 10.9 Magnetic resonance imaging (MRI)	507
	Concept review	509
	Key equations	510
	Questions	510
	Online resources	511

11 Analytical chemistry 512

	Drugs, sport, and analytical chemistry	513
11.1	Carrying out an analysis	515
	Box 11.1 Analysing a food contaminant	522
11.2	Electrochemical methods of analysis	523
	Box 11.2 Rapid blood analysis using electrochemical methods	526
11.3	Chromatography	528
	Box 11.3 Monitoring PCBs in the environment	537
	Box 11.4 Gas chromatography-mass spectrometry (GC-MS)	538
	Box 11.5 Chiral HPLC	541
11.4	Spectroscopic methods of analysis	542
	Box 11.6 Alcohol analysis and drink-driving	542
	Box 11.7 A pulse oximeter	546
11.5	Atomic spectrometry	547
	Box 11.8 Why is the temperature so important in atomic emission spectrometry?	547
	Concept review	552
	Key equations	553
	Questions	553
	Online resources	555

12 Molecular characterization 556

	Using isotope ratios to analyse orange juice	557
12.1	Mass spectrometry	558
	Box 12.1 Ionization methods	560

Box 12.2 Using tandem mass spectrometry in newborn screening	568	Box 14.7 Obtaining silicon for use in silicon chips	682
12.2 Infrared spectroscopy	570	Box 14.8 Energetics of biochemical reactions	683
12.3 Nuclear magnetic resonance spectroscopy	578	Box 14.9 How much work can you get from glucose?	685
Box 12.3 Running an NMR spectrum	580	14.6 Variation of Gibbs energy with conditions	686
Box 12.4 Magnetic field strength and resolution	580	Box 14.10 Obtaining metals from ores	689
Box 12.5 Drawing a ^1H NMR spectrum	595	Concept review	691
12.4 Structure determination using a combination of techniques	600	Key equations	691
Box 12.6 Determining degrees of unsaturation	601	Questions	692
Concept review	606	Online resources	693
Questions	607	
Online resources	610	15 Chemical equilibrium	694
.....		Equilibria in the oceans	695
13 Energy and thermochemistry	612	15.1 Gibbs energy and equilibrium	697
Launching the Ariane 5 rocket	613	Box 15.1 Solubility equilibria	701
13.1 Energy changes in chemistry: heat and work	614	15.2 The direction of a reaction: the reaction quotient	702
Box 13.1 James Joule and the equivalence of heat and work	615	Box 15.2 Equilibrium in fizzy water	704
13.2 Enthalpy and enthalpy changes	620	15.3 Gibbs energy and equilibrium constants	705
13.3 Enthalpy changes in chemical reactions	623	Box 15.3 Deriving the relationship between ΔG^\ominus and K	705
Box 13.2 Comparing fuels	629	Box 15.4 Contrails from jet aircraft	707
Box 13.3 Thermochemistry for fast food	630	15.4 Calculating the composition of a reaction at equilibrium	710
13.4 Variation of enthalpy with temperature	634	Box 15.5 Chalk, lime, and mineral water: an example of heterogeneous equilibrium	713
Box 13.4 Deriving the Kirchhoff equation	636	15.5 Effect of conditions on reaction yields and K	713
13.5 Internal energy and the First Law of thermodynamics	637	15.6 Thermodynamics—putting it all together	719
Box 13.5 Isothermal expansion of an ideal gas	639	Box 15.6 A case study in reaction thermodynamics: the Haber process	720
Box 13.6 Nitroglycerine: the chemistry of an explosive	644	Concept review	721
13.6 Measuring energy changes	645	Key equations	721
Box 13.7 Calorimetry, food, and metabolism	648	Questions	721
Concept review	650	Online resources	725
Key equations	650	
Questions	651	16 Electrochemistry	726
Online resources	653	Electrical energy on the move	727
.....		16.1 What is electrochemistry?	728
14 Entropy and Gibbs energy	654	16.2 Ions in solution	730
Protein folding	655	Box 16.1 Ultrapure water and conductivity	733
14.1 What are spontaneous processes?	656	16.3 Electrochemical cells	735
14.2 Entropy and the Second Law of thermodynamics	660	Box 16.2 Electrochemical cells as portable energy sources	737
Box 14.1 Variation of the molar entropy of a substance with temperature	663	Box 16.3 Practical measurement of E^\ominus values	745
14.3 The Third Law and absolute entropies	664	16.4 Thermodynamics of electrochemical cells	746
Box 14.2 Determination of standard entropy, S_{298}^\ominus	665	Box 16.4 Corrosion as an electrochemical process	751
Box 14.3 What is the lowest temperature that can be reached?	668	Box 16.5 Bioelectrochemistry: nerve cells and ion channels	754
14.4 Entropy changes in chemical reactions	669	16.5 Electrolysis	755
Box 14.4 What happens when proteins don't fold correctly?	673	Box 16.6 Electrolysis and rechargeable batteries	758
14.5 Gibbs energy	675	Concept review	761
Box 14.5 Gibbs energy: the balance between enthalpy change and entropy change	677	Key equations	761
Box 14.6 Thermodynamics of addition polymerization	679	Questions	761
		Online resources	763

	27 p-Block chemistry	1202		
	Photochemical smog	1203		
27.1	General aspects and trends in the p block	1205		
27.2	Group 13: boron, aluminium, gallium, indium, thallium, and nihonium	1211		
Box 27.1	Recycling aluminium	1213		

27.3	Group 14: carbon, silicon, germanium, tin, lead, and flerovium	1218	28.6	Colour in coordination compounds	1291
	Box 27.2 The greenhouse effect and global warming	1220	28.7	Magnetic properties	1294
	Box 27.3 Silicones—shiny hair and cosmetic surgery	1222		Box 28.5 Ferromagnetism and recording information	1295
27.4	Group 15: nitrogen, phosphorus, arsenic, antimony, bismuth, and moscovium	1225	28.8	Aqueous chemistry of the first row d-block ions	1297
	Box 27.4 Fluxional molecules	1232		Box 28.6 Trapping metal ions using the chelate effect	1298
	Box 27.5 Firearms and forensic science	1233		Box 28.7 Haemoglobin and the transport of oxygen	1300
27.5	Group 16: oxygen, sulfur, selenium, tellurium, polonium, and livermorium	1234		Concept review	1302
	Box 27.6 The ozone layer	1235		Key equations	1303
	Box 27.7 Sulfur on Io	1237		Questions	1303
27.6	Group 17: fluorine, chlorine, bromine, iodine, astatine, and tennessine	1242		Online resources	1304
	Box 27.8 Chlorofluorocarbons and the ozone hole	1243	Maths toolkit		1305
27.7	Group 18: helium, neon, argon, krypton, xenon, radon, and oganesson	1250	Appendices		
	Box 27.9 Using argon to date rocks	1251	Appendix 1	Abbreviations and symbols for quantities and units	1333
27.8	p-Block organometallic chemistry	1253	Appendix 2	Representing reactions	1337
	Concept review	1254	Appendix 3	Preparation and reactions of alcohols and amines	1339
	Questions	1254	Appendix 4	Organic oxidation and reduction reactions	1342
	Online resources	1255	Appendix 5	Properties of the elements	1344
		Appendix 6	Electronic configurations of the elements and some important ions	1352
	28 d-Block chemistry	1256	Appendix 7	Thermodynamic data for organic and inorganic compounds	1356
	Colouring with metal pigments	1257	Appendix 8	Ionic, atomic, and van der Waals radii for selected elements	1366
	Box 28.1 Technetium and imaging the brain	1259	Appendix 9	Acidity constants	1369
28.1	The d-block elements	1260	Appendix 10	Bond lengths and bond enthalpies	1371
28.2	Chemistry of the first row d-block elements	1265	Appendix 11	Electromagnetic spectrum	1374
28.3	Coordination chemistry	1267	Answers		1375
	Box 28.2 The extraction of gold	1270	Index		1392
	Box 28.3 Platinum anti-cancer drugs	1277	The Greek alphabet		1405
	Box 28.4 Coordination network structures	1280	SI multiplication prefixes		1405
28.4	Crystal field theory	1281	Physical constants		1405
28.5	Filling the d orbitals	1284	Unit relationships		1406
			List of useful data		1406
