The Revolutionary City

URBANIZATION AND THE GLOBAL TRANSFORMATION OF REBELLION

MARK R. BEISSINGER

PRINCETON UNIVERSITY PRESS
PRINCETON & OXFORD

ILLUSTRATIONS

1.1. The relationship of revolution to other forms of politics. 28

1.2. Exposure to regime repression, disruptive efficiency, and proximity to centers of power. 39

1.3a. Revolutionary episodes, 1900–2014: locations. 50

1.3b. Revolutionary episodes, 1900–2014: tactics. 50

1.3c. Revolutionary episodes, 1900–2014: goals. 51

1.3d. Revolutionary episodes, 1900–2014: outcomes. 51

2.1. The yearly onset of new revolutionary episodes, 1900–2014. 58

2.2. The number of ongoing revolutionary episodes per year, 1900–2014. 59

2.3. The average duration of revolutionary episodes, by onset year. 60

2.4. The yearly hazard rate of the materialization of a revolutionary episode across 158 fixed territorial units around the world. 61

2.5. Revolutionary episodes and attempted military coups, 1945–2014. 62

2.6. The onset of new social revolutionary episodes, 1900–2014. 63

2.7. The onset of urban civic and other urban revolutionary episodes, 1900–2014. 64

2.8. Time and the incidence of new revolutionary episodes. 65

2.9. Land concentration and the probability of onset of social revolutionary episodes. 66

2.10. Percentage of global population that is urban/rural, 1800–2050. 67

2.11. Average level of urbanization of societies experiencing new revolutionary episodes, 1900–2014. 71

2.12. Percentage of revolutionary episodes occurring primarily in a rural or an urban setting. 72

2.13. The onset of rural and urban social revolutionary episodes, 1900–2014. 73
2.14. Class and occupational participation in revolutionary episodes, by time period. 83
2.15. The probability that a particular media form was used, by urban/rural location of revolutionary episode. 87
2.16. State capacity by location and type of revolution (Hanson/Sigman state capacity index). 92
3.1. The probability of onset of urban civic and social revolutionary episodes, by Polity score (t–1). 109
3.2. The probability of onset of urban civic and social revolutionary episodes, by longevity of incumbent leader in power. 111
3.3. The probability of onset of urban civic and social revolutionary episodes, by GDP per capita (t–1). 113
3.4. The probability of onset of urban civic and social revolutionary episodes, by rates of economic growth (t–1). 114
3.5. Predicted probabilities for an urban civic revolutionary episode in Tunisia, 1960–2014. 124
3.6. Predicted probabilities for an urban civic revolutionary episode in Serbia, 1960–2014. 127
3.7. Predicted probabilities for an urban civic revolutionary episode in Myanmar, 1960–2014. 128
3.8. Predicted probabilities for an urban civic revolutionary episode in Ukraine, 1992–2014. 131
3.9. Predicted probabilities for an urban civic revolutionary episode in South Korea, 1960–2014. 135
3.10. Predicted probabilities for an urban civic revolutionary episode in Czechoslovakia, 1960–2014. 137
3.11. Predicted probabilities for an urban civic revolutionary episode in Indonesia, 1960–2014. 138
3.12. Predicted probabilities for an urban civic revolutionary episode in the Philippines, 1960–2014. 140
3.13. Predicted probabilities for an urban civic revolutionary episode in Mexico, 1960–2014. 145
3.14. Predicted probabilities for an urban civic revolutionary episode in Malaysia, 1960–2014. 147

4.1. Successful and failed revolutionary episodes over time, 1900–2014. 154
4.2. Percentage of successful revolutionary episodes over time, 1900–2014. 155
4.3. Marginal probability of revolutionary success by episode type, controlling for the effects of time. 156
4.4. Polity scores and the mean probability of opposition success, by rural, urban, and urban civic episodes. 158
4.5. Military expenditure per soldier (deciles) and revolutionary outcomes, with and without civil war. 165
4.6a. ROC curves based on regime features (rural vs urban episodes), complete-case analysis. 174
4.6b. ROC curves based on regime features (rural vs urban episodes), multiple-imputation analysis. 175
4.7. Peak participation and the marginal probability of opposition success. 180
4.8. Peak participation and the average probability of opposition success in urban, rural, urban civic, and other urban revolutionary episodes. 183
4.9. Violence and the probability of opposition victory, rural vs urban context. 186
4.10a. ROC curves based on opposition features (rural vs urban episodes), complete-case sample. 191
4.10b. ROC curves based on opposition features (rural vs urban episodes), multiple imputation. 192
6.1. Khreshchatyk and Duma Square in 1918, as seen from a German aerial photo. 238
6.2. Khreshchatyk and Independence Square in 2017. 240
6.3. Distance from seat of government, by outcome. 258
6.4. Mean concentration of populations in capital cities, 1900–2014. 260
7.1. Behavioral categories in the Orange and Euromaidan revolutions. 280
7.2. Behavioral categories in the Tunisian and Egyptian revolutions. 282
7.3. The probability of participating in revolutionary protests, by gender. 289

7.4. The probability of participating in revolutionary protests, by age category. 290

7.5. Occupations of participants in revolutionary protests (percentage of participants), relative to percentage of occupation in society as a whole. 293

7.6. The probability of participating in revolutionary protests, by income quintiles. 295

7.7. The probability of participating in revolutionary protests, by consumer goods ownership. 296

7.8. The probability of participating in revolutionary protests, by level of education. 297

7.9. Probability of participation in, support of, or opposition to revolution, by whether respondent speaks Ukrainian at home (Orange and Euromaidan revolutions). 299

7.10. Probability of participation, support, or opposition to revolution, by level of religiosity among Muslims (Egyptian and Tunisian revolutions). 301

7.11. Political self-identification among participants, supporters, and opponents of revolution (Orange and Euromaidan revolutions). 303

7.12a. Profile plots for three-cluster model of revolution participants: Orange Revolution. 306

7.12b. Profile plots for three-cluster model of revolution participants: Euromaidan Revolution. 306

7.13. Probability of participation in revolutionary protests, by participation of friends and family and the use of internet as the primary source of information about the revolution (Egyptian and Tunisian revolutions). 315

8.1. Average predicted deaths (thousands) per revolutionary episode involving civil war, by year of episode onset. 326

8.2. The probability of a revolutionary episode involving civil war, by year of episode onset. 334

8.3. Average predicted deaths per revolutionary episode without civil wars, by year of episode onset. 340

9.1. Conceptualizing the impact of revolution. 367

9.2. Survival functions for regimes after social and urban civic revolutionary episodes. 369

9.3. Survival functions for post-revolutionary regimes, by length of revolutionary episode. 371

9.4a. Growth in GDP per capita for failed revolutions, relative to matched cases. 380

9.4b. Growth in GDP per capita for successful revolutions, relative to matched cases. 381

9.5a. Growth in GDP per capita for successful social revolutions, relative to matched cases. 383

9.5b. Growth in GDP per capita for failed social revolutions, relative to matched cases. 384

9.6a. Growth in GDP per capita for successful urban civic revolutions, relative to matched cases. 385

9.6b. Growth in GDP per capita for failed urban civic revolutions, relative to matched cases. 386

9.7a. V-Dem political corruption index for urban civic revolutionary episodes, failed vs successful episodes. 390

9.7b. V-Dem political corruption index for social revolutionary episodes, failed vs successful episodes. 391

9.8a. V-Dem equal distribution of resources index for successful social revolutions, relative to matched cases. 397

9.8b. V-Dem equal distribution of resources index for successful urban civic revolutions, relative to matched cases. 398

9.9a. Income inequality (Gini index) for social revolutions (successful vs failed revolutions). 400

9.9b. Income inequality (Gini index) for urban civic revolutions (successful vs failed revolutions). 401

9.10a. V-Dem political killing index for successful social revolutions, relative to matched cases. 404

9.10b. V-Dem political killing index for successful urban civic revolutions, relative to matched cases. 405

9.11a. V-Dem political civil liberties index for successful social revolutions, relative to matched cases. 407

9.11b. V-Dem political civil liberties index for successful urban civic revolutions, relative to matched cases. 408

9.12a. V-Dem private civil liberties index for successful social revolutions, relative to matched cases. 409

9.12b. V-Dem private civil liberties index for successful urban civic revolutions, relative to matched cases. 410

9.13a. V-Dem rule of law index for successful social revolutions, relative to matched cases. 411

9.13b. V-Dem rule of law index for successful urban civic revolutions, relative to matched cases. 412

9.14a. V-Dem government accountability index for successful social revolutions, relative to matched cases. 413

9.14b. V-Dem government accountability index for successful urban civic revolutions, relative to matched cases. 414

TABLES

3.1. A probabilistic model of the onset of urban civic revolutionary contention. 116

3.2. A comparison of factors associated with the onset of revolutionary contention and military coup attempts. 120

4.1. Incumbent regime characteristics and the likelihood of opposition victory in revolutionary contention. 170

4.2. Opposition characteristics and the likelihood of opposition victory in revolutionary contention. 177

4.3. Combined models of regime and opposition characteristics and the likelihood of opposition victory in revolutionary contention. 194

8.1. Number of deaths in revolutionary episodes, by period of onset. 322

8.2. Estimated impact of changing conditions of contention on deaths in revolutionary civil wars, Cold War vs post–Cold War periods. 329

8.3. Estimated impact of selection processes into or away from civil war on deaths in revolutions in the Cold War and post–Cold War periods. 336

8.4. Estimated impact of changing conditions of contention on deaths in episodes without civil wars, first half of the twentieth century vs post–Cold War period. 341

A2.1. Revolutionary episodes, 1900–2014. 442

A3.1. Cross-sectional data, means and distributions. 467

A4.1. Multiple imputation for panel data, summary statistics. 472

A4.2. Multiple imputation for cross-sectional data, summary statistics. 479

A4.3. Covariate balances before and after matching. 494
