

BRAIN AND BEHAVIOUR

**MOLECULAR MECHANISMS OF
NEUROTRANSMISSION AND
THEIR ROLE IN DISORDER**

MARTIN CLARK

DETAILED CONTENTS

<i>List of figures</i>	xi
<i>About the author</i>	xv
<i>Acknowledgements</i>	xvii
1 An introduction to neurotransmitters and their machinery	1
The neuron	2
Introduction to neurotransmitters	4
The machinery behind neurotransmitters and neurotransmission	7
Conclusion	20
References	21
2 Glutamate	23
Introduction	24
Outline of glutamate's synthesis, packaging and reuptake	24
Outline of glutamate receptors	31
Classical topics in glutamate research	36
Conclusion	47
References	48
3 GABA (gamma aminobutyric acid)	53
Introduction	54
Outline of GABA's synthesis, packaging and reuptake	54
Outline of GABA receptors	59
Classic topics in GABA research	67
Novel topics in GABA research	71
Conclusion	76
References	76

4	Acetylcholine	83
	Introduction	84
	Outline of acetylcholine's synthesis, packaging and reuptake	84
	Outline of acetylcholine receptors	91
	Classic topics in acetylcholine research	94
	Novel topics in acetylcholine research	103
	Conclusion	105
	References	107
5	Dopamine	113
	Introduction	114
	Outline of dopamine's synthesis, packaging and reuptake	114
	Outline of dopamine receptors	120
	Classic topics in dopamine research	122
	Novel topics in dopamine research	135
	Conclusion	140
	References	141
6	Serotonin	147
	Introduction	148
	Outline of serotonin's synthesis, packaging and reuptake	148
	Outline of serotonin receptors (ionotropic and metabotropic)	154
	Classic topics in serotonin research	158
	Novel topics in serotonin and sleep promoting neurons	171
	Conclusion	173
	References	174
7	Endogenous opioids	181
	Introduction	182
	Outline of endogenous opioids synthesis, packaging and reuptake	182
	Outline of opioid receptors	189
	Classic topics in opioid research	194
	Conclusion	210
	References	212
8	Substance P (an example tachykinin)	219
	Introduction	220
	Outline of Substance P: synthesis, packaging and degradation	222

Outline of neurokinin receptors	227
Classic topics in substance P research	229
Novel topics in substance P research	242
Conclusion	245
References	248
9 Nitric oxide	255
Introduction	256
Outline of nitric oxide's synthesis, packaging and reuptake	258
Outline of nitric oxide receptors/signalling	264
Classic topics in nitric oxide research	266
Novel topics in nitric oxide research	274
Conclusions	277
References	278
10 Neurons outside the CNS and interactions between neurotransmitter mechanisms	285
Introduction: Neurons outside the central nervous system	286
Outline of the enteric nervous system	286
Enteric nervous system dysfunction	293
Interactions between neurotransmitter mechanisms	297
Conclusion	308
References	311
<i>Index</i>	319

LIST OF FIGURES

Figure 1.1	A schematic of a neuron	2
Figure 1.2	An indicative trace of an action potential	3
Figure 1.3	Schematic illustration of Loewi's experimental set up with connection between the two chambers to allow molecules to move from chamber 1 to chamber 2	5
Figure 1.4	An example of the complex subtypes of neurotransmitters	7
Figure 1.5	Illustration of a vesicle with the typical channels embedded in its membrane	11
Figure 1.6	Schematic of a typical ionotropic receptor found bound in the plasma membrane of a neuron	14
Figure 1.7	Schematic of a typical membrane bound metabotropic receptor	16
Figure 2.1	Molecular structure of glutamate	25
Figure 2.2	Illustration of a vesicle packaging the neurotransmitter glutamate	27
Figure 2.3	A minimal model illustrating the expression of EAATs on glia and the ions involved in the transport of glutamate by EAATs	29
Figure 2.4	The cycle of glutamate uptake and synthesis in astrocytes	30
Figure 2.5	A minimal model illustrating glutamate receptor expression on pre- and postsynaptic terminals	35
Figure 2.6	The impact of specific receptor agonists and antagonists on intercranial self-stimulation (ICSS) threshold and the corresponding meaning for the value of rewards	42
Figure 3.1	A simplified schematic representing the binding of antibodies to a target protein (GAD) using IHC techniques, and the resultant image visualised using a fluorescent microscope	56
Figure 3.2	Illustration of a vesicle packaging the neurotransmitter GABA	58

Figure 3.3	Side and top view of a GABA _A receptor inserted in the neuronal plasma membrane	61
Figure 3.4	Side view of a GABA _A receptor located in the neuron's plasma membrane	64
Figure 3.5	Side view of a GABA transporter located in the neuron's plasma membrane	66
Figure 4.1	The location of cholinergic neurons and their projection networks in the brain	85
Figure 4.2	The complex mechanisms of glucose metabolism in cellular mitochondria	87
Figure 4.3	Illustration of acetylcholine binding at pre- and postsynaptic muscarinic receptors and the reuptake of choline after dissociation from the receptors	90
Figure 5.1	The molecular structure of dopamine	115
Figure 5.2	The location of dopaminergic neurons and their projection networks in the brain	115
Figure 5.3	The two-step process of dopamine synthesis	117
Figure 5.4	Illustration of a vesicle packaging dopamine with the typical channels embedded in its membrane	119
Figure 5.5	The complex intracellular cascades modulated as a consequence of dopamine bindings at D1-like and D2-like receptors	121
Figure 5.6	Circuits and brain regions identified as involved in either 'liking' or 'wanting' behaviours	124
Figure 5.7	Evolutionary conserved orofacial responses produced in response to 'pleasurable' solutions, such as sucrose and aversive/unpleasant solutions such as bitter quinine	125
Figure 5.8	An illustration of the classic Pavlovian conditioning paradigm	127
Figure 5.9	Addiction as a three-stage process, with each process correlated with the involvement of specific brain regions	137

Figure 6.1	Molecular structure of serotonin	149
Figure 6.2	The raphe nuclei and serotonergic projections from this region into other territories.	150
Figure 6.3	Illustration of a vesicle packaging serotonin with the typical channels embedded in its membrane	152
Figure 6.4	The intracellular processes modulated by the binding of serotonin at 5HT1A receptors	156
Figure 6.5	The complex mechanisms by which serotonin receptors have their effects at pre- and postsynaptic locations as well as beyond the neuron in other cells, such as astrocytes, oligodendrocytes and cytokines	157
Figure 6.6	The stages of the sleep cycle during a typical night	168
Figure 6.7	The ventrolateral preoptic area (VLPO)	170
Figure 7.1	The synthesis of neuropeptides through transcription of DNA and translation of mRNA	184
Figure 7.2	The involvement of zinc metallopeptidases in the degradation of endogenous opioids	188
Figure 7.3	The secondary messenger cascades activated in response to endogenous opioid binding at KORs and MORs	193
Figure 7.4	Homeostatic control of body temperature: the mechanisms by which the body regulates its temperature to keep core temperature within a very narrow set point	195
Figure 8.1	The degradation of substance P	224
Figure 8.2	The involvement of transcription and translational processes in the formation of tachykinins from three key genes	226
Figure 8.3	The myriad of intracellular responses to binding at the NK1 receptor	230
Figure 8.4	A schematic of the typical equipment set up for studies employing the tail flick test	232
Figure 8.5	The intracellular modulation of ROS by substance P activation of NK1 receptors	234

Figure 8.6	A schematic of the typical equipment set-up for studies employing the elevated plus maze to investigate anxiety like behaviour in rodents	240
Figure 9.1	The complex retrograde effects of NO synthesis in the postsynaptic neuron	257
Figure 9.2	The molecular structure of NO typified by one nitrogen and one oxygen molecule	258
Figure 9.3	The multiple molecules needed for the synthesis of NO by NOS, including co-factors, such as FAD and FMN	262
Figure 9.4	The diffusion of NO through the lipid membrane of a neuron followed by its subsequent binding to the heme iron attached to soluble guanylate cyclase (sGC)	265
Figure 10.1	Schematic of the GI tract	287
Figure 10.2	A schematic of the layers of the ENS in the intestine	290
Figure 10.3	Image of the striatum labelled for MORs	300
Figure 10.4	The interaction between nNOS and serotonin transporters	304
Figure 10.5	NO effect on spine protein translation	305
Figure 10.6	Labelled schematic of the GI tract	309
