<b>Introduction to <i>Deciphering Earth's History: the Practice of Stratigraphy</i></b>	<b>1</b>
<b>Acknowledgements</b>	<b>6</b>
<b>Chapter 1. Lithostratigraphy: subdividing rock strata based on lithology</b>	<b>7</b>
1.1 Introduction	7
1.2 Use of lithostratigraphy for subdividing stratified successions	8
1.2.1 Step 1: establish the formations and hierarchical framework for lithostratigraphical units	8
1.2.2 Step 2: protocols for describing and defining lithostratigraphical units	15
1.2.3 Steps 3 and 4: naming of new and existing lithostratigraphical units	15
1.3 Step 5: sampling and curation considerations	20
1.4 Concluding remarks: advantages and limitations	20
<b>Chapter 2. Defining and classifying nonstratiform units: a morphogenetic approach</b>	<b>23</b>
2.1 Introduction	23
2.1.1 Approaches to classifying non-stratiform rocks	23
2.2 The key features of BRUCS	24
2.3 Applying BRUCS to nonstratiform units	28
2.3.1 Step 1: define the mappable bodies	28
2.3.2 Step 2: plan your approach	28
2.3.3 Step 3: classify the units	28
2.3.4 Step 4: assign names	29
2.3.5 Step 5: refine and expand the classification	31
2.3.6 Step 6: formalize the units	31
2.4 Terranes and thrust sheets	34
2.4.1 Terranes	34
2.4.2 Thrust sheets and tectonostratigraphical units	34
2.5 Concluding remarks	38
<b>Chapter 3. Geophysical logs: their use in understanding and correlating subsurface geology</b>	<b>41</b>
3.1 Introduction	41
3.2 Mechanical measurement	42
3.2.1 Caliper log	42
3.2.2 Mud log	42
3.3 Electronic measurement	43
3.3.1 Temperature	43
3.3.2 Pressure	44

3.3.3	Spontaneous potential	44
3.3.4	Gamma ray	44
3.3.5	Acoustic log (sonic)	46
3.3.6	Density log	46
3.3.7	Neutron log	47
3.3.8	Photoelectric factor	47
3.3.9	Resistivity logs	47
3.3.10	Dipmeter log	48
3.3.11	Image logs	49
3.4	Approach to stratigraphical correlation	50
3.4.1	Single or a few boreholes	50
3.4.2	Regional studies	54
3.5	Concluding remarks: advantages and limitations	58
<b>Chapter 4.</b>	<b>Biostratigraphy: using fossils to date and correlate rocks</b>	<b>61</b>
4.1	Introduction	61
4.2	How to carry out a biostratigraphical study	61
4.2.1	Step 1: set the objectives	62
4.2.2	Step 2: choose your fossil group	62
4.2.3	Step 3: devise a sampling strategy	65
4.2.4	Step 4: collect section and sample information	66
4.2.5	Step 5: identify the fossils	66
4.2.6	Step 6: collate the fossil data	67
4.2.7	Step 7: construct a stratigraphical range chart	69
4.2.8	Step 8: identify the biohorizons and biozones	70
4.2.9	Step 9: create an age–depth plot	75
4.2.10	Step 10: incorporate additional stratigraphical information into your age model	76
4.3	Why the biostratigraphy might be wrong and limitations	78
4.4	Final thoughts	78
<b>Chapter 5.</b>	<b>Palaeomagnetism: using the geomagnetic field for correlation and dating</b>	<b>81</b>
5.1	Introduction	81
5.2	Sampling, sample orientation and demagnetization	82
5.2.1	Step 1A: sample collection	82
5.2.2	Step 1B: orientating samples	82
5.2.3	Steps 2A and 2B: demagnetization and component analysis	82
5.3	Geomagnetic polarity stratigraphy (magnetostratigraphy)	84
5.3.1	Integrating steps 3B and 4A: defining the quality of magnetostratigraphical data	85
5.3.2	Naming of magnetozones and magnetochrons	86
5.3.3	Construction of composite magnetozones scales (Step 6A)	87
5.3.4	Objective magnetostratigraphical dating and correlation (steps 6B and 6C)	87
5.4	Palaeointensity and geomagnetic excursions	91
5.4.1	Building a relative palaeointensity record	91
5.4.2	Geomagnetic excursions and palaeointensity-assisted chronology	93

5.5	Palaeosecular variation	96
5.5.1	Analysis of palaeosecular variation data (Step 4)	96
5.5.2	Reference curves and models (Step 5)	97
5.5.3	Age refinement using palaeosecular variation features (Step 6)	97
5.5.4	Objective age modelling approaches (Step 6)	98
5.6	Conclusions	99
<b>Chapter 6.</b>	<b>Chemostratigraphy: using elements and isotopes to identify, interpret and correlate events in strata</b>	<b>101</b>
6.1	Introduction	101
6.1.1	History of elemental stratigraphy	101
6.1.2	History and concept of marine isotope stratigraphy	102
6.1.3	Carbon isotope excursions	103
6.1.4	Residence time	104
6.2	Establishing a chemostratigraphy	105
6.2.1	<i>Step 1: identifying the problem</i>	106
6.2.2	Step 2: designing a chemostratigraphical sampling scheme, sampling and storage	106
6.2.3	Step 3: preparing samples for analysis	110
6.2.4	Step 4: analyses and data quality	110
6.2.5	Step 5: creating a chemostratigraphical type section and correlating sites	113
6.2.6	Step 6: checking your chemostratigraphical framework and making a geological interpretation	115
6.3	Concluding remarks: advantages and limitations	118
<b>Chapter 7.</b>	<b>Seismic stratigraphy: using subsurface images to characterize stratigraphical evolution</b>	<b>121</b>
7.1	Introduction	121
7.1.1	Seismic reflection data	122
7.1.2	Assumptions made when interpreting seismic data	122
7.1.3	Limitations and artefacts	122
7.2	Methods for stratigraphical evaluation of seismic data	123
7.2.1	Reconnaissance mapping	123
7.2.2	Megasequence interpretation	128
7.2.3	Megasequence depth and isopach mapping	130
7.2.4	Sequence interpretation	132
7.2.5	Sequence mapping	132
7.2.6	Terminations and geometries	133
7.2.7	Seismic facies and geobody interpretation	136
7.2.8	Seismic inversion	138
7.3	Developments in seismic data and interpretation tools	138
7.4	Conclusions	138
<b>Chapter 8.</b>	<b>Sequence stratigraphy: using changes in relative sea-level and sediment supply to divide, correlate and understand the stratigraphical record</b>	<b>141</b>
8.1	Introduction	141
8.1.1	History of development and changes in emphasis	142

8.2	Key points of the sequence stratigraphy model	143
8.3	Applying the sequence stratigraphy model	145
8.3.1	Step 1: initial breakdown of the succession	146
8.3.2	Step 2: constructing a broad framework	147
8.3.3	Step 3: filling in the detail	149
8.3.4	Step 4: finishing, testing and using the interpretation	149
8.4	Challenging settings	152
8.4.1	Monotonous lithologies	152
8.4.2	Condensed and hiatus-rich successions and intervals	153
8.4.3	Parasequences absent	154
8.4.4	Mixed siliciclastic and carbonate successions	154
8.5	Sea-level curves: considerations for use and construction	157
8.5.1	Possible pitfalls of eustatic sea-level curves	157
8.6	Sampling considerations	158
8.7	Concluding remarks: advantages and limitations	159
<b>Chapter 9.</b>	<b>Cyclostratigraphy: regular cycles detected and counted to measure time</b>	<b>161</b>
9.1	Introduction	161
9.1.1	Development of cyclostratigraphy from studies of Milankovitch cycles	162
9.2	Data collection and generating time series	164
9.3	Spectral analysis in cyclostratigraphy	166
9.3.1	The Fourier transform	166
9.3.2	Pre-processing time series	166
9.3.3	Generating power spectra: spectral estimation	166
9.3.4	Detecting regular cycles in depth and time	167
9.3.5	Other types of data analysis	169
9.4	Interpreting power spectra	171
9.4.1	Time–depth distortions	171
9.4.2	Testing time series for evidence of orbital forcing of climate	171
9.4.3	Orbital tuning and its pitfalls	175
9.5	Concluding remarks: advantages and limitations	176
<b>Chapter 10.</b>	<b>Climate stratigraphy: use of climate changes for stratigraphical correlation</b>	<b>181</b>
10.1	Introduction	181
10.1.1	History of the development of climate stratigraphy	181
10.2	Evidence and proxies for climate change	183
10.2.1	Sedimentary deposits	183
10.2.2	Biological proxies of climate change	185
10.2.3	Geochemical records of climate change	189
10.3	Placing boundaries between climatic units	189
10.4	Land–sea correlation: examples from the Quaternary	190
10.5	Future potential of Quaternary climate stratigraphy	193
10.6	Concluding remarks: advantages and limitations	194

<b>Chapter 11. Morphostratigraphy and pedostratigraphy: using landforms and soils to subdivide strata</b>	<b>197</b>
11.1 Introduction	197
11.2 Morphostratigraphy	198
11.2.1 The morphostratigraphy of anthropogenic deposits	202
11.2.2 Formal status of morphostratigraphical units: morpholithostratigraphy, erosional boundaries and allostratigraphy	204
11.3 Pedostratigraphy	205
11.3.1 Soil characteristics	206
11.3.2 Analysis of palaeosols	207
11.3.3 Soils within volcanic eruption successions	209
11.4 Concluding remarks: advantages and limitations	210
<b>Chapter 12. Incompleteness: dealing with an imperfect stratigraphical record</b>	<b>213</b>
12.1 Introduction	213
12.2 Stratigraphical incompleteness	214
12.2.1 Defining and measuring stratigraphical completeness	214
12.2.2 Recognizing stratigraphical incompleteness in practice	218
12.3 Incompleteness of the fossil record	219
12.3.1 Clotting and smearing of fossil range limits	219
12.4 Sampling considerations	224
12.5 Concluding remarks	225
<b>Chapter 13. Chronostratigraphy: understanding rocks and time</b>	<b>227</b>
13.1 Introduction	227
13.1.1 Geological timescales and the International Chronostratigraphic Chart	228
13.2 Organizing rocks and time: chronostratigraphy and geochronology	228
13.3 Chronostratigraphical and geochronological units	230
13.4 Building a chronostratigraphical scale	230
13.5 Global Stratotype Sections and Points (GSSPs)	233
13.5.1 The role of the International Commission on Stratigraphy	233
13.5.2 Forming a working group and establishing the context of a GSSP	233
13.5.3 Identifying a means of primary correlation	234
13.5.4 Nominating a section and point for a GSSP	234
13.5.5 The route to GSSP approval	237
13.6 The Archean and Proterozoic timescale and Global Standard Stratigraphic Ages (GSSAs)	237
13.7 Regional chronostratigraphical schemes	242
13.8 Summary and conclusions	242
<b>Chapter 14. Geochronology: radio-isotope dating applied to the stratigraphical record</b>	<b>245</b>
14.1 Introduction	245
14.2 What material needs dating?	246
14.3 Materials for radio-isotopic dating	249
14.4 Considering uncertainties: error bars and beyond	250
14.5 Approaches for dating rocks and minerals	251

14.5.1	Step 1: assemble the team	251
14.5.2	Step 2: field sampling	252
14.5.3	Step 3: understand and characterize the materials	252
14.5.4	Step 4: analyses	255
14.5.5	Step 5: interpreting data: sample ages	255
14.5.6	Step 6: assigning uncertainty	257
14.5.7	Step 7: interpreting data: stratigraphical ages and age–depth models	257
14.5.8	Step 8: reporting the data, and metadata, in papers and beyond	259
14.6	Concluding remarks	259
<b>Chapter 15. Building geological timescales and assigning chronometric time to rocks</b>		<b>261</b>
15.1	Introduction	261
15.2	Time and duration in stratigraphy	262
15.2.1	Time tools	262
15.3	Initial stages of timescale creation	263
15.3.1	Correlation basics	264
15.3.2	Synchronicity and uncertainty in correlation and dates	264
15.4	Construction of composite stratigraphical scales	265
15.5	Construction of age models	265
15.5.1	Creating age models from astrochronology	266
15.5.2	Creating age models from radio-isotopic dates	269
15.6	Conclusions	273
<b>Chapter 16. Best practices for preserving and reporting stratigraphical data: cyber infrastructure for stratigraphical data and information</b>		<b>277</b>
16.1	Introduction	277
16.1.1	FAIR data	279
16.2	Data collation and archiving	279
16.2.1	Field data: stratigraphical logs, photographs, field notebooks, samples	279
16.2.2	Quantitative sample-based stratigraphical data	280
16.2.3	Age models	281
16.2.4	Where should data be archived?	282
16.3	Data synthesis	286
16.3.1	Introduction: motivations for data synthesis	286
16.3.2	Are spreadsheets an adequate solution?	286
16.3.3	Relational databases as a data storage solution	287
16.3.4	Compiling data for a database: data cleansing and harmonization	289
16.3.5	Data presentation and analysis	290
16.4	Conclusions	291
<b>Chapter 17. Examples of correlating, integrating and applying stratigraphy and stratigraphical methods</b>		<b>293</b>
17.1	Introduction	293
17.2	Correlation techniques (Wakefield and Hounslow)	295

17.2.1	Graphic correlation	296
17.2.2	Sequence slotting	299
17.3	Non-marine and marine to non-marine correlation (Marshall)	302
17.4	Rock property modelling (Newell and Woods)	307
17.4.1	Step 1: establish model purpose and context	307
17.4.2	Step 2: assembling the raw input data	307
17.4.3	Step 3: preparation of the 3D modelling grid	308
17.4.4	Step 4: assigning hard data to the modelling grid	309
17.4.5	Step 5: constructing the 3D property model	309
17.4.6	Model uncertainty	312
17.4.7	Concluding remarks on rock property models	312
17.5	Stratigraphy in engineering geology (Mortimore)	312
17.5.1	Stratigraphical characterization of the Chalk Group for engineering	313
17.5.2	Building a ground model	314
17.5.3	Concluding remarks on the use of stratigraphy in engineering ground models	316
17.6	Archaeological stratigraphy (Edgeworth)	316
17.6.1	Relative dating of intercutting features on a horizontal plane	316
17.6.2	Relative dating of heavily cut deposits in a vertical section	318
17.6.3	Dating and correlating strata with artefacts	319
17.6.4	Concluding remarks on archaeological stratigraphy	319
17.7	Forensic stratigraphy: from the macro to the micro (Ruffell)	319
17.7.1	Microscale: the sample	320
17.7.2	Mesoscale: the crime scene	321
17.7.3	Macroscale: the search	322
17.7.4	Conclusions on forensic stratigraphy	322
17.8	Correlation, integration and application of stratigraphical data: concluding remarks	322
<b>Chapter 18.</b>	<b>Determining morphostratigraphy of planetary surfaces with examples from Mars</b>	<b>327</b>
18.1	Introduction to planetary stratigraphy	327
18.2	Approaches to investigating planetary surfaces	328
18.2.1	Common visible and infrared imaging datasets and software tools	328
18.2.2	General approaches, caveats and limitations of morphostratigraphy	329
18.2.3	Morphostratigraphy from topography	331
18.2.4	Morphostratigraphy from composition	332
18.3	Impact craters as relative and quantitative chronometers	334
18.4	Planetary geological maps	340
18.5	Ground-truthing orbital observations	340
18.6	Conclusions	341
<b>Index</b>		<b>343</b>

# List of worked examples

<b>Worked example 1.1:</b>	Hierarchical subdivisions of the UK Chalk Group (Northern Province) – dealing with different levels of detail	11
<b>Worked example 1.2:</b>	Hierarchical subdivisions of the Deccan Basalt Group, India	13
<b>Worked example 1.3:</b>	Lithostratigraphical nomenclature in cyclic deltaic successions – the Yoredale Group of northern England	18
<b>Worked example 2.1:</b>	Intrusions and mixed-class units in the Glen Etive and Glen Coe area, Scotland, UK	31
<b>Worked example 2.2:</b>	Tectonometamorphic units in the Shetland Ophiolite, Shetland Islands, Scotland, UK	35
<b>Worked example 3.1:</b>	Matching mud-log data to geophysical logs	43
<b>Worked example 3.2:</b>	Interpreting siliciclastics from mud-log data – an example from the Jurassic of the Central North Sea, UK	51
<b>Worked example 3.3:</b>	Evaporites from the Zechstein Basin, northern England	53
<b>Worked example 3.4:</b>	Using logs to correlate across an extensive siliciclastic deltaic succession – the Brent Group, North Sea, UK	55
<b>Worked example 3.5:</b>	Regional stratigraphical interpretation and correlation in a monotonous carbonate succession – the Chalk Group, UK	56
<b>Worked example 4.1:</b>	Calcareous nannofossil biostratigraphy from IODP Site 1403, North Atlantic Ocean	77
<b>Worked example 5.1:</b>	Quantitative magnetostratigraphical correlation using Late Jurassic data from the S'Adde section, Sicily, Italy	88
<b>Worked example 5.2:</b>	Palaeointensity-assisted chronology for IODP Site UI304 sediments, Gardar Drift, North Atlantic	95
<b>Worked example 6.1:</b>	Using carbon isotope stratigraphy to identify and correlate the Paleocene–Eocene Thermal Maximum worldwide	115
<b>Worked example 6.2:</b>	Application of elemental chemostratigraphy to oil and gas exploration; an example from the Carboniferous of the Southern North Sea, UK	117
<b>Worked example 7.1:</b>	Reconnaissance mapping of a 2D grid in the Great South Basin, New Zealand	126
<b>Worked example 7.2:</b>	Interpreting megasequence TWT structure maps and isochron maps from the Eyre Sub-basin	131
<b>Worked example 7.3:</b>	Interpreting stratal geometries to understand stratigraphical architecture and evolution in the Browse Basin, Australia	135
<b>Worked example 8.1:</b>	Sequence stratigraphy of a succession with evidence for fluvial incision – the Dunvegan Formation, Canada	151
<b>Worked example 8.2:</b>	Sequence stratigraphy of Homerian mixed carbonates and siliciclastics from the Midland Platform, UK – from local to global correlation	155
<b>Worked example 9.1:</b>	Cyclostratigraphy of the Blue Lias Formation of southern Britain – estimating the duration of the Hettangian (Jurassic)	172
<b>Worked example 10.1:</b>	Holocene dendrochronology for the Northern Hemisphere	187
<b>Worked example 10.2:</b>	Carboniferous climate stratigraphy using facies analysis of equatorial successions	188
<b>Worked example 10.3:</b>	Correlating local terrestrial climate records from the Pleistocene glacial succession in Greece with ocean records of global climate change	191
<b>Worked example 11.1:</b>	Examples of useful morphostratigraphical features	199
<b>Worked example 11.2:</b>	The Chinese Loess Plateau	208
<b>Worked example 11.3:</b>	Palaeosols in the Deccan Province, India	209
<b>Worked example 12.1:</b>	Estimating the completeness of the Torridonian Supergroup, Scotland (UK)	217

<b>Worked example 12.2:</b> Evaluating the completeness and quality of the fossil record through graphic correlation	222
<b>Worked example 13.1:</b> Constructing a chronostratigraphy – the Sandbian Stage, Upper Ordovician	232
<b>Worked example 13.2:</b> Solutions used to deal with challenges associated with defining some GSSPs	237
<b>Worked example 15.1:</b> Floating astrochronology for the Paleocene	268
<b>Worked example 15.2:</b> Age-model construction – the Devonian	271
<b>Worked example 17.1:</b> Sequence slotting using pollen abundance data	300
<b>Worked example 17.2:</b> Marine to non-marine correlation – recognizing the Eday Marl Formation as the Taghanic Event	305
<b>Worked example 17.3:</b> Marine to non-marine correlation – Chinle Formation, Colorado Plateau, Arizona, USA	306
<b>Worked example 17.4:</b> A regional rock property model of the Chalk Group of southern England	310
<b>Worked example 17.5:</b> Ground model for the Brighton and Hove Stormwater Tunnel	315
<b>Worked example 17.6:</b> A Romano-British site in a rural setting	317
<b>Worked example 17.7:</b> Dealing with complexity in urban anthropogenic ground	318
<b>Worked example 17.8:</b> Rural murder and burial	320
<b>Worked example 17.9:</b> Stratigraphy in search	323
<b>Worked example 18.1:</b> Erosion rates in Valles Marineris, Mars	336
<b>Worked example 18.2:</b> Evolution of volcanic processes in Syrtis Major, Mars	338
<b>Worked example 18.3:</b> Lessons from Gale crater, Mars	341
