Thermal Analysis and Thermodynamics

In Materials Science

DE GRUYTER

Contents

Preface — V

1 Thermodynamic basis — 1

- 1.1 Specific heat capacity — 1
 - 1.1.1 Phenomenological description — 1
 - 1.1.2 Atomistic description — 6
 - 1.1.3 Contributions to c_V — 9
- 1.2 Derived thermodynamic potentials — 10
 - 1.2.1 Enthalpy — 10
 - 1.2.2 Entropy — 14
 - 1.2.3 Gibbs-free energy — 17
- 1.3 Thermoelectricity, thermocouples — 19
 - 1.3.1 Phenomenological description — 19
 - 1.3.2 Atomistic description — 22
- 1.4 Phases — 22
 - 1.4.1 Some crystallography — 23
 - 1.4.2 Phase transitions — 27
- 1.5 Phase diagrams — 31
 - 1.5.1 Binary phase diagrams without intermediate compound — 32
 - 1.5.2 Phase diagrams with intermediate compound — 43
 - 1.5.3 Phase diagrams with three and more components — 48

2 Techniques — 76

- 2.1 Differential thermal analysis (DTA) — 78
 - 2.1.1 DTA: technical details — 78
 - 2.1.2 DTA: examples — 80
- 2.2 Thermogravimetry (TG) — 84
 - 2.2.1 TG: technical details — 85
 - 2.2.2 TG: examples — 85
- 2.3 Differential scanning calorimetry (DSC) — 89
 - 2.3.1 DSC: technical details — 89
 - 2.3.2 DSC: examples — 91
- 2.4 Evolved gas analysis (EGA) — 95
 - 2.4.1 EGA: technical details — 95
 - 2.4.2 EGA: examples — 97
- 2.5 Calibration of thermoanalytic devices — 101
 - 2.5.1 Temperature calibration — 102
 - 2.5.2 Sensitivity calibration — 104
 - 2.5.3 Thermal resistance calibration — 109
- 2.6 Technical conditions for thermal analysis — 112

2.6.1	Crucibles for thermal analysis —	112
2.6.2	Atmosphere —	117
2.6.3	Sample mass —	123
2.6.4	Temperature change rate —	125
2.7	Kinetics —	126
2.7.1	Introduction —	126
2.7.2	Rate laws —	128
2.7.3	Methods of kinetic analysis —	132
2.8	Thermodynamic modeling —	141
2.8.1	Calculation of thermodynamic equilibrium —	142
2.8.2	Simulation of thermoanalytic measurements —	148
2.8.3	Predominance diagrams —	154
3	Applications —	158
3.1	Characterization of raw materials —	158
3.1.1	Calcination of carbonates —	158
3.1.2	Annealing loss of oxides —	160
3.1.3	Stoichiometry of oxides —	162
3.1.4	Hydrolysis of chalcogenides —	164
3.1.5	Purification of fluorides —	168
3.2	Measurement of thermodynamic properties —	169
3.2.1	Melting points —	169
3.2.2	Specific heat capacity c_p —	177
3.2.3	A thermodynamic dataset —	179
3.3	Determination of phase diagrams —	182
3.3.1	Eutectic system: LiCl–KCl —	184
3.3.2	Eutectic system with rim solubility: KCl–KI —	188
3.3.3	System with intermediate compound: LiF–YF ₃ —	190
3.3.4	System with intermediate compound: KCl–BaCl ₂ —	194
3.3.5	Missing data for a complex compound: Y ₃ Al ₅ O ₁₂ —	197
A	Symbols —	201
B	Answers to problems —	203
C	Stability of oxides —	209
Bibliography —		233
Subject index —		249
Formula index —		255
