

Translational Epigenetics

Volume 17

Stem Cell Epigenetics

Edited by

Eran Meshorer

The Arthur Gutterman Family Chair in Stem Cell Biology; Full Professor of Molecular Biology, Department of Genetics, The Institute of Life Sciences and The Edmond and Lily Safra Center for Brain Sciences, The Hebrew University, Jerusalem, Israel

Giuseppe Testa

Full Professor of Molecular Biology, Department of Oncology and Hemato-Oncology, University of Milan; Head of the Center for Neurogenomics, Human Technopole; Director of the High Definition Disease Modelling Laboratory, European Institute of Oncology, Milan, Italy

Introduction	xv
CHAPTER 1 Epigenetic processes and DNA repair in embryonic stem cells	1
Orazio Angelo Arcidiacono, Jana Krejčí, Soňa Legartová, Lenka Stixova, and Eva Bártová	
DNA methylation: Basic concepts	1
Methylation reprogramming, Epigenetic memory, and development	3
DNA methylation in embryonic stem cells during their differentiation	5
Epitranscriptome: A brief overview	6
A function of RNA pseudouridylation in ESCs	6
A role of 5-methylcytidine (m ⁵ C) in the biology of ESCs	7
N ⁶ -Methyladenosine (m ⁶ A) in the RNAs of ESCs	7
Histone signature in embryonic stem cells	8
DNA repair in embryonic stem cells	12
Funding	14
Acknowledgment	14
Conflict of interest statement	14
References	15
CHAPTER 2 The epigenetics of pluripotent stem cells	25
Stephanie L. Battle and R. David Hawkins	
Section 1: Introduction to embryonic stem cells and defining naïve vs primed	25
Introduction	25
Derivation of mouse embryonic stem cells	25
Primed human embryonic stem cells do not reflect preimplantation	27
Derivation of naïve human embryonic stem cells	28
Conclusions, further thoughts	35
Section 2: Epigenetic differences between naïve and primed	35
Introduction	35
DNA methylation	35
Histones and DNA binding proteins	43
Repetitive elements and long noncoding RNAs	52
Chromatin organization and 3-D architecture	59
Conclusions, further thoughts	62
Section 3: Beyond naïve and primed	63
Totipotent embryonic stem cells	63
Naïve and primed embryonic stem cells in other species	64

Chapter conclusion	65
References.....	65

CHAPTER 3 A change in culture: Modeling human germ cell development in vitro.....75

Camille Dion and Harry G. Leitch

Early human PGC development in vivo	75
Establishment of the PGCLC system in mouse.....	78
Modeling the early human germline in vitro with PGCLCs.....	79
Later human PGC development.....	81
Gene expression signatures.....	81
Epigenetic reprogramming in human PGCs in vivo	81
Epigenetic changes in human PGCLCs in vitro	82
Challenges and future perspectives.....	83
Toward an understanding of early human PGC development	83
Modeling later human germ cell development	83
Learning from and treating human germline disorders	85
Acknowledgments	86
References.....	87

CHAPTER 4 Chromatin architecture and topology in pluripotent stem cells.....93

Angeliki Platania and Tom Sexton

Introduction.....	93
Chromatin loops: Remote control of gene transcription.....	95
The factors in chromatin looping: Not just transcription.....	97
Topologically associated domains as units of genome regulation.....	99
Building chromosomal domains: Looping principles extended a TAD.....	101
Chromosome compartments: From a bipolar genome to specific functional networks	104
Chromosome territories and interchromosomal interactions.....	105
Breaking TADs: The exceptions to the rule.....	105
Concluding remarks.....	107
References.....	107

CHAPTER 5 The pluripotent cell cycle..... 115

Sergi Aranda and Luciano Di Croce

Introduction.....	115
Cell cycle control in pluripotent cells	115
The biological consequences of having a short G1	118
The biological consequences of having an accelerated cell cycle	119
Involvement of cell cycle in ESC cell fate decisions	120
Mechanistic insight to the cell cycle-linked regulation of cell fate commitment.....	122

Maintaining pluripotent cell identity during mitosis	124
Conclusions.....	125
Acknowledgments	125
References.....	126

CHAPTER 6 Mitotic bookmarking by transcription factors and the preservation of pluripotency 131

Nick D.L. Owens, Inma Gonzalez, Jerome Artus, and Pablo Navarro

Introduction.....	131
Epigenetics in early development.....	132
Early mammalian development and cell cycle progression.....	133
TFs and early mouse embryogenesis.....	134
Zygotic genome activation.....	134
TF-mediated specification of the TE, PrE, and Epi.....	135
TF-mediated stem cell self-renewal.....	136
The epigenetic paradox of pluripotent cells.....	138
Mitotic bookmarking by TFs	139
Chromatin and transcriptional regulation during Mitosis.....	139
Mitotic bookmarking by Esrrb and other pluripotent factors in ES cells.....	140
Mitotic phosphorylation and pluripotency TFs	142
Mitotic bookmarking and the coupling of cell cycle, self-renewal, and cell fate	143
Conclusion	145
References.....	146

CHAPTER 7 Roles and regulation of endogenous retroviruses in pluripotency and early development..... 155

Sharon Schlesinger, Miguel R. Branco, and Jacqueline E. Mermoud

Introduction.....	155
The structure and function of ERVs	157
ERV activation in pluripotency	159
ERV activity during germline maturation.....	160
ERV activity upon embryonic genome activation (EGA).....	161
Functions of ERVs as promoters and enhancers.....	163
Long noncoding RNAs	164
Genome topology.....	165
Retrotransposition.....	166
Restricting ERV activity	167
Transcriptional silencing mechanisms.....	167
Recruiting silencing components to ERVs	169
Many paths ensure suppression of ERV transcription	169
Silencing by HUSH	170

	ERV suppression by chromatin remodeling	170
	RNA based regulation of ERVs).....	172
	Summary/open questions.....	173
	References.....	173
CHAPTER 8	Single-cell technologies in stem cell epigenetics.....	187
	Chen Kozulin, Danny Bavli, and Oren Ram	
	Introduction.....	187
	Single-cell RNA sequencing.....	189
	Well separation approach.....	189
	Microfluidic-based approaches.....	191
	No cell separation approach.....	193
	Single-cell DNA sequencing	194
	Genomic sequencing.....	194
	Epigenomic sequencing	196
	Chromatin architecture analysis	197
	Single-cell data analysis	199
	Summary.....	201
	References.....	202
CHAPTER 9	Chromatin plasticity in pluripotent and cancer stem cells	207
	Alva Biran and Eran Meshorer	
	Introduction.....	207
	Histone modifications: The histone code.....	210
	Linker histone H1	211
	Chromatin plasticity in differentiation and reprogramming	212
	Dynamic global chromatin rearrangement during reprogramming	213
	Cancer heterogeneity and cancer stem cells (CSCs)	216
	Epigenetic alterations in cancer.....	217
	H1.0, a barrier for reprogramming	218
	Conclusions.....	221
	References.....	221
CHAPTER 10	Transcriptional and epigenetic regulatory mechanisms in glioblastoma stem cells.....	231
	Raul Bardini Bressan and Steven M. Pollard	
	Introduction.....	231
	Epigenetic mechanisms in cancer	232
	Glioblastoma.....	233
	Cancer stem cell model of glioblastoma.....	234
	Transcriptional networks that drive the glioblastoma stem cell state	237

Chromatin regulators in glioblastoma.....	238
Regulation of DNA methylation in glioblastoma	239
Genetic disruption of epigenetic regulators in glioblastoma	240
IDH1/2 mutation in low-grade glioma and secondary GBM	240
Histone H3 mutations in pediatric high-grade gliomas	241
Epigenetic therapy	243
Concluding remarks.....	245
Acknowledgments	246
References.....	246
Further reading.....	255

CHAPTER 11 Three-dimensional models of human brain development..... 257

Alejandro Lopez-Tobon, Nicolò Caporale, Sebastiano Trattaro,
and Giuseppe Testa

Introduction.....	257
General overview of human brain development.....	258
Morphological features.....	258
Molecular regulation.....	260
Epigenetic landscape of human brain development.....	261
Approaches to study the developing human brain in 3D	262
Primary and postmortem samples.....	263
Neurospheres	265
Organoids.....	265
Conclusion	270
References.....	271

CHAPTER 12 The role of chromatin modifiers in common neurodevelopmental disorders 279

Raymond A. Poot

Many autism genes are chromatin modifiers.....	279
Autism-associated chromatin modifiers likely act in neural stem cells or progenitors	281
Potential processes affected in autism patients with chromatin modifier mutations.....	281
DNA double-strand break repair.....	282
Mitotic defects in neural progenitors.....	282
Cell proliferation regulation and cancer	283
Chromatin modifier mutations and schizophrenia.....	283
Chromatin modifiers and intelligence.....	285
Outlook	285

Genome sequencing combined with phenotypic analyses.....	286
Protein-protein interaction networks	286
Model systems	287
Conclusions.....	287
References.....	287
Index	291
