

THE THERMODYNAMICS OF PHASE AND REACTION EQUILIBRIA

Second Edition

İSMAİL TOSUN

Middle East Technical University
Department of Chemical Engineering
Ankara, Turkey

Contents

<i>Preface</i>	xv
<i>Preface to the first edition</i>	xvii
<i>Notation</i>	xix
1. Review of the first and second laws of thermodynamics	1
1.1. Definitions	1
1.1.1. System	1
1.1.2. Property and state	1
1.1.3. Steady-state, uniform, and equilibrium	3
1.2. Concepts of the “abstract world” of thermodynamics	3
1.2.1. State and path functions	4
1.2.2. Reversible process	4
1.2.3. General approach used in the solution of thermodynamics problems	5
1.3. Work	5
1.4. Paths followed during a process	6
1.5. The first law of thermodynamics	7
1.5.1. Simplification of the energy balance	8
1.5.1.1. Isolated system	8
1.5.1.2. Closed system	8
1.5.1.3. Steady-state flow system	9
1.6. The second law of thermodynamics	9
1.6.1. Simplification of the entropy balance	11
1.6.1.1. Isolated system	11
1.6.1.2. Closed system	11
1.6.1.3. Steady-state flow system	11
1.7. Equation of state	12
1.7.1. Pressure–volume–temperature relations for pure substances	13
1.8. Heat capacity	15
References	16
2. Thermodynamic property relations	17
2.1. Work functions	17
2.2. Fundamental equations	18
2.2.1. Maxwell relations	20
2.3. Differential changes in internal energy, enthalpy, and entropy	20
2.3.1. Differential change in internal energy	20
2.3.2. Differential change in enthalpy	23
2.3.3. Differential change in entropy	24
2.4. Relationship between partial derivatives	26
2.4.1. Inverse rule	26

2.4.2.	Triple product rule	27
2.5.	Coefficient of thermal expansion and isothermal compressibility	29
2.6.	Relationship between heat capacities	33
2.6.1.	Relationship between $\tilde{C}_P$ and $\tilde{C}_V$	33
2.6.1.1.	Gases	36
2.6.1.2.	Liquids and solids	36
2.6.2.	Relationship between $\tilde{C}_V$ and $\tilde{C}_V^*$ for gases	37
2.6.3.	Relationship between $\tilde{C}_P$ and $\tilde{C}_P^*$ for gases	38
	Problems	40
	References	51
3.	Pressure–volume–temperature properties of pure substances	53
3.1.	Compressibility factor	53
3.2.	Virial equation of state	53
3.3.	Cubic equations of state	56
3.3.1.	Isotherms of the cubic equations of state	59
3.3.2.	Maxwell equal area rule	61
3.3.2.1.	Solution of Eqs. (3.3-4)–(3.3-6)	62
3.3.3.	Cubic equations of state in terms of dimensionless parameters	69
3.4.	Principle of corresponding states	72
3.4.1.	Lee–Kesler generalized correlation	73
3.5.	Which equation of state to use?	75
	Problems	76
	References	81
4.	Calculations of changes in internal energy, enthalpy, and entropy	83
4.1.	Liquids and solids	83
4.1.1.	Change in internal energy	83
4.1.2.	Change in enthalpy	84
4.1.3.	Change in entropy	85
4.2.	Gases	87
4.2.1.	General expressions for departure functions	88
4.2.1.1.	Enthalpy departure function	88
4.2.1.2.	Internal energy departure function	89
4.2.1.3.	Entropy departure function	89
4.2.2.	Departure functions for virial equation of state	92
4.2.3.	Departure functions for cubic equations of state	94
4.2.4.	Departure functions from the Lee–Kesler generalized correlation	107
	Problems	110
5.	Equilibrium and phase stability in one-component systems	115
5.1.	Equilibrium criteria for closed systems	115
5.1.1.	Condition of maximum entropy	115
5.1.2.	Condition of minimum internal energy	116
5.1.3.	Condition of minimum Helmholtz energy	116

5.1.4.	Condition of minimum Gibbs energy	117
5.2.	Equilibrium criteria for open systems	118
5.3.	Phase stability	120
5.3.1.	Change in Gibbs energy with pressure	120
5.3.2.	Change in Gibbs energy with temperature	122
5.4.	Clapeyron equation	124
5.4.1.	Vapor–liquid equilibrium	126
5.4.1.1.	Calculation of $\Delta\tilde{H}^{vap}$ using the cubic equations of state	128
5.4.2.	Solid–liquid equilibrium	131
5.4.3.	Solid–vapor equilibrium	134
5.5.	Gibbs–Helmholtz equation	136
	Problems	139
	References	150
6.	Fugacity of a pure component	153
6.1.	Fugacity and fugacity coefficient	153
6.1.1.	Alternative expression for fugacity	154
6.1.2.	Physical significance of fugacity	155
6.1.3.	Calculation of fugacity	155
6.2.	Fugacity of a pure gas	156
6.2.1.	Fugacity from volume-explicit equations of state	156
6.2.2.	Fugacity from property tables	157
6.2.3.	Fugacity from the virial equation of state	158
6.2.4.	Fugacity from the cubic equations of state	159
6.2.5.	Fugacity from the Lee–Kesler generalized correlation	160
6.3.	Fugacity of a pure liquid	161
6.3.1.	Fugacity from the cubic equations of state	166
6.4.	Fugacity of a pure solid	169
6.5.	Change in fugacity with temperature and pressure	171
	Problems	173
	References	176
7.	Thermodynamics of mixtures	179
7.1.	Partial molar quantity	179
7.1.1.	Determination of partial molar quantities	182
7.1.1.1.	Method of tangent slope	182
7.1.1.2.	Method of tangent intercepts	183
7.1.2.	Homogeneous functions and partial molar quantities	188
7.2.	Property change on mixing	189
7.2.1.	Determination of the volume change on mixing	192
7.2.2.	Determination of the heat of mixing	193
7.2.3.	Correlation of property change on mixing	198
7.2.4.	Determination of partial molar quantities from $\Delta\tilde{\varphi}_{mix}$	200
7.3.	The Gibbs–Duhem equation	201

Problems	204
References	214
8. Equations of state for mixtures	217
8.1. Ideal gas mixture	217
8.2. Virial equation of state	220
8.3. Cubic equations of state	223
8.4. Calculation of ΔU , ΔH , and ΔS using the departure functions	227
8.4.1. Virial equation of state	228
8.4.2. Cubic equations of state	230
8.5. Which equation of state to use?	234
Problems	235
References	239
9. Fugacity of a component in a mixture	241
9.1. Fundamental equations for a multicomponent mixture	241
9.1.1. Equilibrium criteria for a multicomponent system	245
9.1.2. The Gibbs phase rule	246
9.2. Fugacity of a component in a mixture	247
9.3. Ideal mixture	249
9.4. Fugacity of a component in a gas mixture	251
9.4.1. Fugacity of a component in an ideal gas mixture	251
9.4.2. Fugacity of a component in an ideal mixture	251
9.4.3. Fugacity from the virial equation of state	252
9.4.4. Fugacity from the cubic equations of state	253
9.5. Fugacity of a component in a liquid mixture	259
9.6. Change in component fugacity with temperature and pressure	261
9.7. The use of fugacity in phase equilibrium calculations	262
9.7.1. Vapor–liquid equilibrium	262
9.7.2. Solid–liquid equilibrium	267
9.7.3. Solid–vapor equilibrium	268
Problems	271
References	280
10. Excess mixture properties and activity coefficients	281
10.1. Property change on mixing for an ideal mixture	281
10.2. Excess property	283
10.2.1. Relations between excess properties	285
10.3. Activity and activity coefficient	288
10.3.1. Relationship between activity coefficients and excess properties	290
10.3.2. Estimation of excess properties	290
10.3.3. Change in activity coefficient with temperature	295
10.3.4. Change in activity coefficient with pressure	295
10.4. Binary activity coefficient models	297
10.4.1. Two-suffix (one-constant) Margules model	298

10.4.2. Three-suffix (two-constant) Margules model	301
10.4.3. van Laar model	306
10.4.4. Wilson model	309
10.4.5. NRTL model	310
10.4.6. Evaluation of parameters in the Wilson and NRTL models	311
10.5. Regular mixture	315
10.6. UNIFAC	318
10.7. Infinite dilution activity coefficients	323
10.8. Testing consistency of experimental data	332
10.8.1. Isothermal VLE data	334
10.8.2. Isobaric VLE data	336
10.8.3. Consistency tests available in the literature	337
10.9. Activity coefficients for multicomponent mixtures	337
10.9.1. Wilson equation	338
10.9.2. NRTL equation	338
10.10. Which activity coefficient model to use?	340
Problems	341
References	361
11. Vapor–liquid equilibrium	365
11.1. Principles of distillation calculations	365
11.1.1. Vapor–liquid equilibrium diagrams	367
11.1.1.1. Pressure–composition (P_{xy}) diagram	367
11.1.1.2. Temperature–composition (T_{xy}) diagram	369
11.1.1.3. x – y diagram	371
11.1.2. Types of VLE calculations	372
11.2. Raoult's law	373
11.3. VLE calculations for ideal mixtures	376
11.3.1. Bubble point pressure calculation	376
11.3.2. Dew point pressure calculation	379
11.3.3. Bubble point temperature calculation	381
11.3.4. Dew point temperature calculation	382
11.3.5. Isothermal flash calculation	384
11.3.6. Graphical techniques for flash calculations	394
11.3.6.1. The use of P_{xy} and T_{xy} diagrams	394
11.3.6.2. The use of the x – y diagram	397
11.4. VLE calculations for nonideal mixtures	399
11.4.1. Bubble point pressure calculation	400
11.4.2. Dew point pressure calculation	402
11.4.3. Bubble point temperature calculation	404
11.4.4. Dew point temperature calculation	407
11.4.5. Isothermal flash calculation	411
11.5. Azeotrope	417
11.5.1. Relative volatility	422
11.5.2. Criteria for azeotrope formation	427

11.6.	VLE calculations using equations of state	433
11.6.1.	Bubble and dew point (temperature/pressure) calculation	435
11.6.2.	Isothermal flash calculation	438
11.6.3.	Estimation of BIPs	440
11.7.	Gibbs energy minimization	441
11.7.1.	Minimization techniques	443
	Problems	451
	References	475
12.	Solubility of gases in liquids	479
12.1.	Principles of gas absorption calculations	479
12.1.1.	Relation between Henry's law and the Lewis–Randall rule	483
12.1.2.	Relation between $\mathcal{H}_i$ and γ_i^∞	487
12.1.3.	Henry's law and activity coefficients	490
12.2.	Factors affecting gas solubility	492
12.2.1.	Effect of pressure	492
12.2.1.1.	Krichevsky–Kasarnovsky equation	493
12.2.1.2.	Krichevsky–Ilinskaya equation	497
12.2.2.	Effect of temperature	497
12.2.3.	Effect of electrolyte addition	499
12.2.4.	Temperature and pressure in a gas absorber	499
12.3.	Applications of Henry's law	500
12.3.1.	Carbonated beverages	500
12.3.2.	The bends	501
12.3.3.	Natural disaster at Lake Nyos	502
12.3.4.	Knuckle cracking	503
	Problems	504
	References	507
13.	Liquid–liquid and vapor–liquid–liquid equilibrium	509
13.1.	Mathematical preliminaries	509
13.2.	Stability of liquid mixtures	511
13.3.	Liquid–liquid equilibrium (LLE) calculations	519
13.3.1.	LLE flash calculation	524
13.3.2.	Gibbs energy minimization	528
13.3.3.	Octanol–water partition coefficient	534
13.4.	Liquid–liquid extraction	535
13.5.	Vapor–liquid–liquid equilibrium (VLLE)	539
13.5.1.	Steam distillation	544
13.5.2.	VLLE flash calculation	546
	Problems	549
	References	558
14.	Solid–liquid equilibrium	561
14.1.	Pure solid–liquid mixture equilibrium	561

14.1.1. Solubility of a solid in a solvent	564
14.1.2. Freezing point depression	569
14.1.3. Solid–liquid phase diagrams	571
14.1.3.1. Systems exhibiting eutectic behavior	572
14.1.3.2. Systems forming solid solutions	575
14.2. Colligative properties	576
14.2.1. Boiling point elevation	576
14.2.2. Osmosis	580
14.2.2.1. Applications of osmosis	585
Problems	587
References	598
15. Chemical reaction equilibrium	601
15.1. Stoichiometry of a chemical reaction	601
15.2. The law of combining proportions	605
15.3. Chemical reaction equilibrium	611
15.3.1. Evaluation of the equilibrium constant	613
15.3.2. Evaluation of the equilibrium constant - an alternative approach	619
15.4. Gas phase reactions	623
15.4.1. Calculation of equilibrium composition - an alternative approach	634
15.4.2. Variables affecting the extent of reaction	636
15.4.3. Exceptions to Le Chatelier's principle	641
15.5. Liquid phase reactions	642
15.6. Determination of independent reactions	647
15.6.1. Determination of the independent reactions from the known species	650
15.7. Gibbs energy minimization	656
15.8. Heterogeneous reactions	662
15.8.1. The Gibbs phase rule for reactive components	672
15.8.2. Exceptions to Le Chatelier's principle - revisited	675
15.9. Feasibility of a chemical reaction	676
15.9.1. Carbon formation	680
15.9.2. The inverse problem	687
15.10. Simultaneous phase and reaction equilibria	693
Problems	697
