CHAPTER 1 Extreme events and climate change: A multidisciplinary approach	1
Ali Fares, Hamideh Habibi, and Ripendra Awal	
Introduction.....	1
Overview of the chapters	2
Weather parameters	2
Hydrological responses.....	3
Mitigation, adaptation, and governance.....	4
References.....	6
CHAPTER 2 Temperature extremes in a changing climate.....	9
Yating Zhang and Bilal M. Ayyub	
Background.....	9
Temperature change	9
Impacts of extremely hot temperatures.....	10
Temperature extreme analysis and projection	11
Metrics and indices.....	11
Observational analysis.....	11
Temperature projection	12
Mitigation and adaptation strategies	19
Overview of mitigation and adaptation strategies	19
Strategy evaluation	19
Summary and conclusions.....	21
References.....	22
CHAPTER 3 Climate change and extreme river temperature	25
André St-Hilaire, Daniel Caissie, Normand E. Bergeron, Taha B.M.J. Ouarda, and Claudine Boyer	
Introduction.....	25
What are river thermal extremes?	25
Thermal processes affected by climate change	26
Past and current trends and shifts in observations.....	29
River thermal modeling and scenarios at global, regional, and local scales.....	30

	Future work.....	32
	Conclusions.....	33
	References.....	34
CHAPTER 4	Severe convective storms in a changing climate.....	39
	Vittorio (Victor) A. Gensini	
	Observations and trends	40
	Environments.....	41
	SCSs and climate change	41
	Convection-permitting dynamical downscaling.....	42
	Drivers of interannual variability.....	44
	Future research	48
	Forecasting of SCS events.....	48
	Climate change and SCS.....	48
	References.....	49
CHAPTER 5	Response of terrestrial net primary productivity to precipitation extremes: Patterns, mechanisms, and uncertainties	57
	Andrew J. Felton	
	Introduction.....	57
	Changes to precipitation extremes	57
	Precipitation extremes and the carbon cycle	58
	Defining an extreme climate event	59
	Patterns and mechanisms of net primary productivity responses	
	to PPT extremes.....	61
	Interannual timescales	61
	Intraannual timescales	67
	Uncertainties and pathways forward.....	70
	Uncertainties	70
	Pathways forward	72
	Summary.....	75
	References.....	75
CHAPTER 6	Flood early warning systems under changing climate and extreme events	83
	Dongfeng Li, Zheng N. Fang, and Philip B. Bedient	
	Introduction.....	83
	FWS concept and methodology	85
	Gauge network hardware and software.....	86
	Remote sensing precipitation measurement methods.....	87
	Hydrologic and hydraulic modeling.....	88
	Flood monitoring system.....	91

Radar-based FWSs..... 92
 National water model 93
 Iowa flood information system 93
 Texas Medical Center-Rice University flood alert system 94
 Data-driven FWS 97
 Communications 99
 Challenges and future of FWSs 99
 Summary and conclusions 100
 References..... 100

**CHAPTER 7 Lifeline infrastructures and hydroclimate extremes climate:
 A future outlook 105**

Shahzaib Khan, Nishant Kamboj, and Udit Bhatia
 Introduction..... 105
 Organization of the chapter 106
 Quantifying risk from extreme events 107
 Analyzing extremes 108
 Generalized extreme value distribution 108
 Estimation of return levels 108
 Precipitation extremes volatility index 109
 Trend analysis..... 109
 Spatiotemporal variability in volatility 110
 Network perspective on critical infrastructure..... 113
 Mitigation analysis on Mumbai and Indian Railway Networks..... 114
 Gathering network data 114
 Visualizing and analyzing networks 115
 Robustness and recovery characteristics 118
 Conclusion 119
 Acknowledgment 121
 References..... 121

**CHAPTER 8 Form, function, and nomenclature: Deconstructing green
 infrastructure and its role in a changing climate 125**

Vidya Anderson and William A. Gough
 Introduction..... 125
 Systematic review 126
 Characteristics of green infrastructure 127
 Literature review..... 128
 Green infrastructure functions..... 129
 Air pollution abatement..... 131
 Temperature regulation 131
 Carbon reduction and sequestration 132

Stormwater management	133
Biodiversity and pollinator support.....	133
Building energy efficiency	134
Green infrastructure benefits	134
Economic benefits	135
Health benefits	135
Green infrastructure nomenclature.....	136
Conclusions.....	138
References.....	139
Further reading	144

CHAPTER 9 Adaptation to climate extremes and sea level rise in coastal cities of developing countries..... 145

Tu Dam Ngoc Le and Ripendra Awal	
Introduction.....	145
Typologies of coastal adaptation to climate change.....	146
Methodology	146
Climate risks in coastal cities of developing countries	147
Adaptation response to climate extremes and SLR.....	149
Protection measures	150
Accommodation measures.....	150
Managed retreat	163
Discussions	164
Conclusions.....	165
Appendix: List of case studies and documents used as a primary data source ..	166
References.....	169

CHAPTER 10 Multilevel governance in climate change adaptation: Conceptual clarification and future outlook 171

Asif Ishtiaque	
Introduction.....	171
Multilevel governance—Conceptual clarification	172
Evolution of the concept	172
Inclusiveness of MLG	174
The boundary of MLG	174
Approaches of MLG.....	175
MLG concept in climate adaptation.....	176
Research trends in climate adaptation using MLG and future outlook	177
Theme I: Structure and process of MLG	177
Theme II: Power interplay in MLG	178
Theme III: Barriers to adaptation in MLG	180

Conclusion	180
References.....	181
CHAPTER 11 Is the local fulfilling its promise as the agent and site of global climate change governance? The status of local climate mitigation in the United States.....	187
Mark Anthony Ayure-Inga Agana	
Introduction and background.....	187
US climate change policy and politics.....	189
The national level: Politics over policy	189
The state level: Some policy and fewer politics.....	192
The local level: Policy and some politics	193
Data and methods	195
Data	195
Methods.....	195
The status of CAPs.....	197
The spatial distribution of CAPs.....	197
Why localities take on climate mitigation?	199
Progress of GHG CAPs.....	203
Discussion and conclusion	207
References.....	209
CHAPTER 12 The risk of the electrical power grid due to natural hazards and recovery challenge following disasters and record floods: What next?	215
Enrico Zio and Romney B. Duffey	
The electrical power grid is a critical infrastructure: What can happen, and how can it fail?	215
The vulnerability of CIs and hazards to which they are exposed.....	216
Climate change potential additional stress on the CI: The flood case.....	217
Risk assessment and complexity: Limitations and development	219
Assessing flood and outage risk based on past events	221
Resilience definition, quantification, and concept.....	222
Resilience to damage of CIs fights power system outages	223
Emergency response and system recovery	227
Emergency system failure rates for Hurricane Katrina and the Fukushima nuclear events	228
Enhancing power grid “resilience”	231
Managing the response and improving the systems: What next?	232
References.....	233
Further reading	237
Index	239
