

A Materials Science Guide to Superconductors and How to Make Them Super

Susannah Speller

University of Oxford

OXFORD
UNIVERSITY PRESS

Contents

1	Meet the Family	1
1.1	Basic properties of superconductors	1
1.2	Superconducting materials	3
1.3	Critical parameters	8
1.4	Forms of superconductor	9
1.5	The technological superconductors	10
1.6	Applications of superconductors	10
2	Miraculous Magnets	15
2.1	Why are superconductors used for magnets?	15
2.2	How does magnetic resonance imaging work?	20
2.3	Superconducting joints	25
2.4	What else can go wrong?	29
	Chapter summary	34
3	Energy Essentials and Superconducting States	35
3.1	Thermodynamics	36
3.2	Phase diagrams	39
3.3	The superconducting transition	40
3.4	Magnetic properties of superconductors	41
3.5	Why is there a critical field?	45
3.6	Heat capacity at the superconducting transition	47
3.7	Type I and type II superconductivity	48
	Chapter summary	51
4	Levitation Magic	52
4.1	Flux pinning	54
4.2	Stable levitation	62
4.3	Trapped field magnets	64
4.4	Practical magnetisation methods	69
4.5	Applications of trapped field magnets	69
	Chapter summary	71
5	NbTi: The Wonderful Workhorse	72
5.1	The Nb-Ti phase diagram	72
5.2	Choosing the alloy composition	78
5.3	Mechanical properties of metals	82
5.4	Thermomechanical processing of NbTi	85
5.5	Large Hadron Collider wires	88

Chapter summary	90
6 Quirky Quantum Effects	91
6.1 Electrons in metals	93
6.2 Electrons in superconductors	97
6.3 Quantum tunnelling	103
6.4 The weakest link	106
6.5 SQUIDs	107
6.6 Superconducting computers	110
Chapter summary	111
7 Grain Boundaries: the Good, the Bad and the Ugly	112
7.1 What are grain boundaries?	113
7.2 The good: flux pinning	117
7.3 The bad: weak links	119
7.4 The ugly: chemical segregation	120
Chapter summary	123
8 Battles with Brittleness	124
8.1 Intermetallic compounds	124
8.2 Brittle fracture	125
8.3 Magnesium diboride superconductor	127
8.4 Niobium-tin	135
Chapter summary	140
9 High Temperature Heroics	141
9.1 The cuprate compounds	142
9.2 Chemical fussiness	144
9.3 The grain boundary problem	145
9.4 The BSCCO buddies	146
9.5 Revolutionary (RE)BCO	153
9.6 Flux creep	156
9.7 Applications of high temperature superconductors	159
9.8 Small scale stuff	169
Chapter summary	171
10 A Super Future?	172
10.1 Room temperature superconductivity	173
10.2 Discovering superconductors	173
10.3 Novel superconductors	177
10.4 Future applications	185
10.5 The 'perfect' superconductor	193
Appendix A Further reading	195
Appendix B Field decay and joint resistance	197
Appendix C Derivation of condensation energy	200

List of Symbols and Abbreviations	204
References	208
Index	211
