

# The Equations of Materials

Brian Cantor

**OXFORD**  
UNIVERSITY PRESS

# Contents

<b>List of Portraits</b>	xi
<b>Preface</b>	xiii
<b>1 Bravais Lattices</b>	1
1 Bravais lattices	1
2 Auguste Bravais	4
3 Crystal systems	14
4 Point groups	15
5 Space groups	17
6 Crystal planes and directions	18
7 Stereograms	20
8 Non-crystallographic materials	21
9 References	22
10 Bibliography	23
<b>2 Bragg's Law</b>	24
1 X-ray diffraction	24
2 Interference	25
3 Bragg's law	27
4 Lawrence Bragg	28
5 X-ray scattering	37
6 The structure factor	39
7 Fourier transforms	41
8 Electron diffraction and neutron diffraction	42
9 References	43
10 Bibliography	44
<b>3 The Gibbs Phase Rule</b>	45
1 The Gibbs phase rule	45
2 J. Willard Gibbs	47
3 Phase diagrams	53
4 Invariant reactions	55
5 The lever rule	57
6 Solid solutions	58
7 Compounds	59

8	References	64
9	Bibliography	65
<b>4</b>	<b>Boltzmann's Equation</b>	<b>66</b>
1	The laws of thermodynamics	66
2	Boltzmann's equation	68
3	Ludwig Boltzmann	69
4	The fundamental equations of thermodynamics	77
5	Gibbs free energy	80
6	Physical properties	80
7	Chemical reactions	83
8	Solutions	84
9	References	89
10	Bibliography	90
<b>5</b>	<b>The Arrhenius Equation</b>	<b>91</b>
1	Chemical reactions	91
2	Reaction kinetics	92
3	The Arrhenius equation	93
4	Svante Arrhenius	94
5	Reaction equilibria	100
6	Transition states	102
7	Molecularity and order	103
8	Collision theory	105
9	Complex reactions	106
10	References	107
11	Bibliography	108
<b>6</b>	<b>The Gibbs-Thomson Equation</b>	<b>109</b>
1	Surface tension and surface energy	109
2	The Gibbs-Thomson equation	110
3	J. J. Thomson and William Thomson (Lord Kelvin)	111
4	Nucleation of solidification	129
5	Nucleation of precipitation	132
6	Ostwald ripening	135
7	Crystals	136
8	Segregation and adsorption	137
9	References	138
10	Bibliography	140
<b>7</b>	<b>Fick's Laws</b>	<b>141</b>
1	Fick's first law	141
2	Fick's second law	143

3	Adolf Fick	144
4	Thin- and thick-film solutions	149
5	Diffusion mechanisms	153
6	Random walk	154
7	The Kirkendall effect and Darken's equations	156
8	Self-diffusion	158
9	Fourier's and Ohm's laws	160
10	References	161
11	Bibliography	161
<b>8</b>	<b>The Scheil Equation</b>	<b>162</b>
1	Solidification and casting	162
2	Partitioning	162
3	The Scheil equation	164
4	Modified Scheil conditions	166
5	Erich Scheil	167
6	The driving force for solidification	168
7	Nucleation	169
8	Growth	172
9	Eutectic solidification	175
10	Casting	176
11	References	179
12	Bibliography	179
<b>9</b>	<b>The Avrami Equation</b>	<b>180</b>
1	The Avrami equation	180
2	Melvin Avrami, Robert Mehl and Andrei Kolmogorov	182
3	The driving force for transformation	192
4	Nucleation	193
5	Growth	196
6	The Avrami exponent	197
7	Precipitation reactions	200
8	Eutectoid reactions	201
9	Martensite reactions	203
10	Time–temperature–transformation curves	204
11	References	205
12	Bibliography	206
<b>10</b>	<b>Hooke's Law</b>	<b>207</b>
1	Hooke's law	207
2	Robert Hooke	210
3	Interatomic forces	215
4	Stress and strain tensors	217

5	Generalised Hooke's law	221
6	Elastic moduli	221
7	Elastic limits	223
8	References	225
9	Bibliography	225
<b>11</b>	<b>The Burgers Vector</b>	<b>226</b>
1	Dislocations	226
2	Jan Burgers	229
3	Dislocation energy	237
4	Dislocation motion	239
5	The yield point and work hardening	244
6	Deformation and annealing	246
7	Other forms of plasticity	246
8	References	247
9	Bibliography	248
<b>12</b>	<b>Griffith's Equation</b>	<b>249</b>
1	Fracture	249
2	The theoretical strength of materials	249
3	Griffith's equation	251
4	A. A. Griffith	253
5	Fracture toughness	262
6	Fractography	264
7	References	265
8	Bibliography	266
<b>13</b>	<b>The Fermi Level</b>	<b>267</b>
1	Electrical conduction	267
2	Electrons in atoms	270
3	The Fermi level	272
4	Enrico Fermi	275
5	Conductors	287
6	Superconductors	288
7	Insulators	289
8	Semiconductors	291
9	Electronic devices	294
10	References	297
11	Bibliography	299
	<b>Index</b>	<b>301</b>
