

Principles of Genomics and Proteomics

Rakeeb Ahmad Mir

*Department of Biotechnology, School of Life Sciences, Central
University of Kashmir, Ganderbal, Jammu & Kashmir, India*

Sheikh Mansoor Shafi

*The Department of Advanced Centre for Human Genetics,
Sher-i-Kashmir Institute of Medical Sciences, Soura, Srinagar,
Jammu & Kashmir, India*

Sajad Majeed Zargar

*Proteomics Laboratory, Division of Plant Biotechnology,
Sher-e-Kashmir University of Agricultural Sciences & Technology of
Kashmir (SKUAST-Kashmir), Srinagar, Jammu & Kashmir, India*

About the authors	xiii
Foreword.....	xvii
Preface	xix
Acknowledgments.....	xxi

CHAPTER 1	Undestading the OMICS techniques: an introduction to genomics and proteomics.....	1
1	Introduction to genomics.....	1
1.1	Structural genomics.....	2
1.2	Functional Genomics.....	3
1.3	Epigenetics.....	5
2	Genomes of the eukaryotes—nuclear and organelle genomes.....	7
2.1	Chromosomes: a brief account.....	7
2.2	The nuclear genome.....	9
3	Organization of eukaryotic genome.....	10
3.1	Structure of genes in eukaryotes.....	10
4	Organelle genome editing.....	18
4.1	The plastome-chloroplast DNA.....	19
4.2	Mitome-mitochondrial DNA.....	19
5	Introduction to proteomics.....	20
5.1	The protein structure and overview to the structural hierarchies.....	21
6	Proteome profiling.....	25
7	Conclusion.....	26
	References.....	26
CHAPTER 2	Genome mapping	29
1	Introduction	29
1.1	Linkage maps.....	29
1.2	Physical maps	30
2	Markers.....	30
2.1	Simple-sequence repeats	31
2.2	Inter simple sequence repeats.....	32
2.3	Randomly amplified polymorphic DNA.....	33
2.4	Restriction fragment length polymorphism.....	35
2.5	Amplified fragment length polymorphism	36
2.6	Single nucleotide polymorphism.....	37
3	Physical mapping.....	40
3.1	Restriction mapping.....	40

3.2 Fluorescence in situ hybridization.....	41
3.3 Sequence-tagged site mapping	44
References.....	44
CHAPTER 3 Analysis of genomes—I.....	47
1 Introduction	47
1.1 Genome sequencing	47
2 Sangers sequencing/chain-termination sequencing method.....	48
2.1 The basic principle of chain-termination DNA sequencing...	48
3 Whole-genome shotgun sequencing.....	50
4 Hierarchical shotgun sequencing.....	50
5 Next-generation sequencing methods.....	51
5.1 Major NGS techniques include.....	51
5.2 The sequencing methods included in next-generation sequencing.....	53
6 Genome sequencing projects.....	55
6.1 The human genome project	55
6.2 Some facts of HGP	57
6.3 Arabidopsis genome.....	59
6.4 The introduction to microbial genome sequencing.....	59
6.5 Concept of genome annotation.....	60
7 Conclusion.....	62
References.....	63
CHAPTER 4 Analysis of genomes—II.....	65
1 Introduction	65
2 DNA footprinting/deoxyribonuclease I (DNase I) protection mapping	66
2.1 Workflow of DNA footprinting.....	67
2.2 Applications of DNA footprinting.....	69
3 Gel retardation assay or electrophoretic mobility shift assay or band shift assay.....	69
3.1 Basic working principle	70
3.2 Variants of EMSA.....	71
3.3 Applications of EMSA.....	73
4 Chromatin immunoprecipitation and its variants.....	73
4.1 Workflow of ChIP in detail.....	74
4.2 The derivatives of ChIP technique	77
4.3 The ChIP databases.....	80
4.4 Applications of ChIP.....	81
5 Conclusion.....	83
References.....	83

CHAPTER 5	Nutrigenomics: Insights into the influence of nutrients on functional dynamics of genomes.....	89
1	Introduction	89
1.1	The beginning of nutrigenomics.....	92
1.2	Nutrigenomics research tools	92
1.3	Markers for nutrigenomics: the assessment of single nucleotide polymorphism.....	93
1.4	Human nutrition and diseases.....	94
1.5	Celiac disease.....	94
1.6	Irritable bowel syndrome.....	95
1.7	Gastroesophageal reflux disease.....	95
1.8	Food allergies.....	96
1.9	Oral disease	96
1.10	Lifestyle-associated diseases	96
2	Nutrigenomics studies of selected crop plants—a repository of functional foods.....	97
2.1	Buckwheat.....	99
2.2	Quinoa (<i>Chenopodium quinoa</i> wild).....	99
2.3	Amaranth (<i>Amaranthus</i> spp.)	100
2.4	Plant-based foods to address the “lifestyle” diseases	100
2.5	Role in regulating hypertension.....	101
2.6	Food having antidiabetic properties.....	101
2.7	Nutrigenomics, lifestyle diseases, and food quality go hand in hand.....	102
2.8	Nutrigenomics for improving crop.....	102
2.9	Technical intervention: biofortification of crops through nutrigenomic techniques	103
3	Conclusion.....	104
	References.....	105
CHAPTER 6	Analysis of proteomes—I.....	111
1	Polyacrylamide gel electrophoresis and SDS-PAGE	111
1.1	Principle of PAGE	111
1.2	Basic requirements and workflow of PAGE.....	113
1.3	Buffers used in PAGE.....	114
1.4	The gel	114
1.5	Preparation of protein samples	115
1.6	Running the gel.....	116
1.7	Staining of gel and visualization of proteins	116
1.8	Gel interpretation.....	116

2	Isoelectric focusing gels	117
2.1	Preparation of IEF gels	117
3	2D gel electrophoresis-combining SDS-PAGE and IEF for unison gel-based identification of proteins on the basis of size and charge	118
3.1	Basic principle of 2D-GE	118
3.2	Procedure for setup the 2DGE	118
4	MALDI-TOF mass spectrometry	120
4.1	The principle and setup of MALDI-ToF	120
4.2	Basic instrument and working setup	121
4.3	The most commonly used matrix compounds in MALDI ToF	122
4.4	Laser types used in MALDI-ToF	122
4.5	Liner TOF analyzer and reflectron TOF analyzer	122
4.6	The reflectron for higher resolution	124
4.7	Applications of MALDI ToF	124
4.8	Quality control	125
5	Isotope-coded affinity tags	125
5.1	Basic principle and workflow	125
5.2	Applications of isotope-coded affinity tag	127
6	Isotope-coded protein labeling	127
6.1	Applications	128
7	Isobaric tags for relative and absolute quantification	128
7.1	Basic principle and workflow	129
7.2	Some advantages of iTRAQ	130
7.3	Some disadvantages of iTRAQ	130
7.4	Applications	130
8	The tandem mass tag	131
9	Stable isotopic labeling of amino acids in cell culture	131
9.1	Principle of SILAC	132
9.2	The technical workflow of SILAC	132
9.3	SILAC-based applications	133
9.4	Studies of secretomes	133
9.5	Characterization of proteins on the basis of posttranslational modifications	134
9.6	Studying cancer cell proteomes	134
10	Discussion	135
	References	135

CHAPTER 7	Analysis of proteomes—II	139
1	Introduction	139
2	Ultraviolet and visible light spectroscopy	139
2.1	Basic principle.....	140
2.2	Major factors that affect the absorption by UV/Vis spectrum.....	141
2.3	Basic workflow.....	143
2.4	The monochromator	143
2.5	Basics for analysis of samples.....	144
2.6	Some strengths/limitations.....	145
2.7	Applications of UV—visible spectrophotometer.....	145
2.8	Quantification and purification of DNA and RNA analysis.....	145
2.9	Analysis of pharmaceuticals.....	146
2.10	Analysis of beverages	146
2.11	Checking the number or concentration of bacterial cells in cultures.....	146
2.12	Applications.....	146
3	Fluorescence spectroscopy.....	146
3.1	Basic principle	146
3.2	Basic workflow for fluorescence detection and its measurement.....	147
3.3	Major applications of fluorescence spectroscopy	148
3.4	Utility of fluorescence spectroscopy.....	149
4	Nuclear magnetic resonance spectroscopy	149
4.1	The basic principle.....	150
4.2	About magnetic field	151
4.3	NMR spectroscopy of proton	151
4.4	Case study—1: H ₂ O molecule.....	152
4.5	The concept of chemical shift.....	152
4.6	The signal strength.....	153
4.7	The π -electron functions in NMR.....	153
4.8	The significance of NMR	154
4.9	Applications of NMR.....	154
4.10	NMR for elucidating the metabolite structures	154
5	X-ray diffraction.....	154
5.1	The crystallization of proteins.....	155
5.2	The optical setup in X-ray crystallography.....	156

5.3 The mechanism of diffraction analysis.....	156
5.4 Crystal structure determination.....	157
5.5 The rotating crystal method.....	157
5.6 Retrieving and processing of data.....	158
5.7 Applications of X-ray diffraction method.....	158
6 Circular dichroism.....	159
6.1 Basic workflow of CD.....	160
6.2 Applications.....	161
7 Conclusion.....	161
References.....	161
CHAPTER 8 Analysis of proteomes—III.....	165
1 Protein structure prediction.....	165
2 Protein secondary and tertiary structure predictions.....	165
3 Homology or template-based modeling.....	166
3.1 Template identification and initial alignment.....	166
3.2 Generation of models.....	167
3.3 Modeling of loops.....	168
3.4 Model assessment.....	168
4 Protein threading.....	169
4.1 Software for protein threading.....	169
5 Ab initio protein structure predictions.....	170
6 Conclusions.....	173
References.....	173
CHAPTER 9 Analysis of proteomes—IV.....	177
1 Introduction.....	177
2 Yeast 2-hybrid system.....	177
3 Principle.....	179
4 Advantages and limitations.....	180
5 Limitations of Y2H assays.....	180
6 Phage display.....	180
7 Application.....	181
8 Protein chips.....	182
9 Applications of protein microarrays.....	184
9.1 Analytical microarrays.....	184
9.2 Functional protein microarrays.....	185
10 Conclusion and future prospective.....	187
References.....	188

CHAPTER 10 Beyond genomics and proteomics.....	191
1 Introduction	191
2 Transcriptomics	192
2.1 Technological intervention.....	192
3 Metabolomics.....	196
3.1 Technical intervention	197
3.2 Workflow for metabolome analysis	199
3.3 Applications of metabolomics.....	200
4 Interactomics.....	204
4.1 Methodology of interactomics.....	205
4.2 Applications of interactomics.....	208
5 Lipidomics.....	209
5.1 Technical intervention	210
5.2 Applications of lipidomics.....	211
6 Metagenomics	213
6.1 Methodology employed for metagenomics	214
6.2 Applications of metagenomics	215
7 Ionomics.....	218
7.1 Technical intervention for studying ionomics.....	219
7.2 Applications of ionomics.....	221
8 Connectomics.....	221
8.1 Technical inputs for connectomics	222
8.2 Applications of connectomics	224
9 Conclusion.....	225
References.....	226
Further reading.....	242
 Index.....	 245
