

THE ROUTLEDGE HANDBOOK OF PALEOPATHOLOGY

Edited by Anne L. Grauer

CONTENTS

<i>List of Figures</i>	<i>xi</i>
<i>List of Boxes and Tables</i>	<i>xiii</i>
<i>List of Contributors</i>	<i>xv</i>
<i>Foreword</i>	<i>xxx</i>
<i>Acknowledgments</i>	<i>xxxvi</i>
1 Introduction <i>Anne L. Grauer</i>	1
PART I	
Applications, Methods, and Techniques in Paleopathology	17
2 The Macroscopic Study of Human Skeletal Paleopathology <i>Simon Mays</i>	19
3 Differential Diagnosis and Rigor in Paleopathology <i>Jo Appleby</i>	43
4 Epidemiology and Mathematical Modeling <i>Samantha L. Yaussy</i>	64
5 Paleohistopathology: History, Technical Aspects, and Diagnostic Challenges <i>Sandra Assis and Hans H. de Boer</i>	82
6 Paleoradiology <i>Chiara Villa and Marie Louise Jørkov</i>	105

7	Isotopes in Paleopathology <i>Chris Stantis and Ellen J. Kendall</i>	118
8	Genetics and Genomics <i>Susanna Sabin and Anne C. Stone</i>	136
9	Parasitology and Paleopathology <i>Aida R. Barbera, Morgana Camacho and Karl Reinhard</i>	158
10	Historical Sources, Historiography, and Paleopathology <i>Piers D. Mitchell</i>	180
11	Osteobiography and Case Studies <i>Alexis T. Boutin</i>	192
12	Mummified Remains <i>Ken Nystrom, Dario Piombino-Mascali, Jane E. Buikstra and Lucía Watson Jiménez</i>	210
PART II		
	Investigating Diseases and Conditions of the Past	229
13	“Sticks and Stones May Break My Bones”: Traumatic Injuries in Paleopathology <i>Jennifer F. Byrnes and Katherine Gaddis</i>	231
14	Developmental Conditions in Paleopathology <i>Anne R. Titelbaum, Scott E. Burnett and D. Troy Case</i>	250
15	Tumors and Neoplastic Diseases: Assessing Antiquity and Pondering Prevalence <i>Casey L. Kirkpatrick</i>	271
16	Treponemal Infection <i>Brenda J. Baker</i>	292
17	Here and Now, There and Then: Two Mycobacterial Diseases Still with Us Today <i>Charlotte A. Roberts, Kelly E. Blevins, Kori Lea Filipek and Aryel Pacheco Miranda</i>	306
18	Paleopathology of Infectious Diseases <i>Olivier Dutour</i>	324

Contents

19	Metabolic and Endocrine Diseases <i>Megan B. Brickley and Brianne Morgan</i>	338
20	Dental Disease <i>Jaime Ullinger and Tisa Loewen</i>	360
PART III		
Theoretical Approaches and New Directions		379
21	Ethical Considerations for Paleopathology <i>Carlina de la Cova</i>	381
22	Synthesizing Stress in Paleopathological Perspective: Theory, Method, Application <i>Daniel H. Temple and Haagen D. Klaus</i>	397
23	Theoretical Approaches to the Paleopathology of Infants, Children, and Adolescents: Structural Violence as a Holistic Interpretive Tool in Paleopathology <i>Sián E. Halcrow and Gwen Robbins Schug</i>	417
24	Issues of Gender, Identity, and Agency in Paleopathology <i>Pamela K. Stone and Adam Netzer Zimmer</i>	435
25	Disability and Care in the Bioarchaeological Record: Meeting the Challenges of Being Human <i>Lorna Tilley</i>	457
26	Defining the Margins, Embodying the Consequences <i>Madeleine Mant and Lauren September Poeta</i>	482
27	Interpreting Trauma and Social Violence from Skeletal Remains <i>Debra L. Martin, Aurora Marcela Pérez-Flórez, Clairra Ralston and Ryan P. Harrod</i>	502
28	The Developmental Origins of Health and Disease: Implications for Paleopathology <i>Rebecca Gowland and Jennifer L. Caldwell</i>	520
29	Disease in the Fossil Record <i>Florian Witzmann and Patrick Asbach</i>	541
30	Zooarchaeology and the Paleopathological Record <i>László Bartosiewicz and Khashaiar Mansouri</i>	557

Contents

31	Plagues and Pandemics	576
	<i>Sharon N. DeWitte, Ziyu R. Wang and Saige Kelmelis</i>	
32	Public Perceptions of Paleopathology and the Future of Outreach	593
	<i>Kristina Killgrove and Jane E. Buikstra</i>	
33	Big Pictures in 21st-Century Paleopathology: Interdisciplinarity and Transdisciplinarity	625
	<i>Jane E. Buikstra, Elizabeth W. Uhl and Amanda Wissler</i>	
	<i>Index</i>	637

FIGURES

2.1	Numbers of publications in the bibliometric study mainly or solely directed at paleopathology using macroscopy as the sole means of studying skeletal lesions versus those that supplement macroscopy with medical imaging alone, microscopy alone or both medical imaging and microscopy.	22
2.2	Macroscopic appearance of taphonomic damage versus lytic in vivo lesions in various states of remodeling.	28
3.1	Mentions of differential diagnosis in the <i>American Journal of Physical Anthropology</i> (AJPA), <i>International Journal of Osteoarchaeology</i> (IJO), and <i>International Journal of Paleopathology</i> (IJPP) from the 1960s to 2020.	44
4.1	The multistate model of morbidity and mortality described by Usher (2000) and further applied by DeWitte and Wood (2008).	72
6.1	Healed malaligned fracture of a right tibia (a) photograph; (b) radiograph; (c) coronal CT scan.	109
6.2	Mandible with pronounced destruction due to treponemal disease (syphilis): (a) photograph; (b) radiograph; (c) axial CT scan; (d) coronal CT scan.	110
6.3	A right humerus showing sign of osteoarthritis on the head: (a) photograph; (b) lateral X-ray; (c) coronal CT scan; (d) axial CT scan; (e) sagittal CT scan.	111
6.4	A right femur showing signs of osteomyelitis at the distal end due to a fracture: (a) photograph frontal view; (b) photograph posterior view; (c) X-ray; (d–f) coronal CT scans.	111
7.1	Carbon ($\delta^{13}\text{C}$) and nitrogen ($\delta^{15}\text{N}$) stable isotope incremental dentine collagen data for an adolescent with tuberculosis, showing the onset of wasting from around seven years of age.	125
8.1	Decision tree for incorporating an ancient DNA component into a project.	143
9.1	The Pathoecology Lab at the School of Natural Resources.	160
13.1	Illustrations of fracture types. (A) Transverse fracture; (B) Spiral fracture; (C) Comminuted fracture; (D) Impacted fracture; (E) Greenstick fracture; and (F) Oblique fracture.	235

13.2	Illustration of fracture healing process. (a) Hematoma formation; (b) Soft callus formation; (c) Hard callus formation; (d) Remodeling of hard callus.	239
14.1	Osteogenesis imperfecta in a 20th c. young adult female.	253
14.2	Anomalies of the foot.	257
14.3	Developmental anomalies of the axial skeleton.	258
18.1	Comparison of age distribution of acute osteomyelitis at the end of the 19th century (Lannelongue, 1879) and at the mid-20th century (Trueta, 1959).	330
18.2	Paleopathological cases of chronic osteomyelitis: (a) Right tibia, showing the involucrum and the cloacal opening; (b) Diaphysis of femur displaying bifocal osteomyelitis; (c) Complete sclerosis of the medullar canal characteristic of Garré's sclerosing osteomyelitis.	332
18.3	Three paleopathological examples of joint fusion due to infectious arthritis: (a) left ulna; (b) right humerus, radius, and ulna fused at elbow joint; (c) left femur fused to os coxae.	334
19.1	Generic bone with varying cortical thicknesses illustrating basic principles underlying lesion formation occurring in the four basic biological mechanisms that results in porotic lesions.	348
19.2	Porotic lesions of the orbit Individual SMB217 (1.3 years), St. Martin's UK	350
19.3	Systemic evaluation and interpretation of porotic lesions.	353
20.1	Illustration of (a) dental caries, (b) dental calculus, (c) periapical lesions, and (d) AMTL.	362
20.2	Illustration of abfraction.	367
20.3	Illustration of irritation of dentinal tubules that can lead to dental sensitivity and dental hypersensitivity.	367
22.1	Commonly used phenotypic alterations associated with stress experience in paleopathology.	398
22.2	Scurvy is an increasingly scrutinized indicator of preadult biological stress in paleopathology. A chronic insufficiency of vitamin C leads to production of subperiosteal hemorrhages and osseous responses to inflammation in multiple anatomic sites.	403
22.3	Enamel surface and perikymata spacing profile of a right mandibular second incisor for individual 194 from the Takasago site, Hokkaido, Japan.	405
22.4	Enamel cross-striations each representing approximately one day of growth.	405
25.1	Examples of BoC application – Mau Bac Burial 9 and the Nasca Boy.	467
29.1	Examples of pathological lesions in the fossil record.	545
29.2	Fossil evidence of Paget's Disease of Bone.	551
30.1	Parodontal disease in sheep. 1: Neolithic Endrőd 23B, Hungary; 2: Neolithic Tell Karanovo, Bulgaria; 3: Chalcolithic Horum Höyük, Anatolia/Turkey; 4: Chalcolithic Polyanitsa, Bulgaria.	562
30.2	The distribution of pathological lesions by body region in domestic animals.	564
30.3	Healed fracture of a horse left third metacarpal showing slight dislocation and shortening (Early Iron Age Stična, Slovenia).	567
30.4	The number of bilateral zoonoses shared by humans and various animals as a function of the time since domestication.	568

BOXES AND TABLES

Boxes

8.1	Glossary of Terms	136
8.2	Ethical Checkpoint: Data Management	140
8.3	Ethical Checkpoint: Initiating a Genomics Project	142
8.4	Ethical Checkpoint: Data Mining	146
16.1	Current Issues in the Paleopathological Diagnosis of Treponemal Disease	294

Tables

2.1	Numbers of publications (2011–2019) devoted specifically to paleopathology that are reliant upon macroscopy alone, split by focus on different classes of pathology	22
2.2	A dual process model of paleopathological diagnosis	25
2.3	Some kappa values reported for recording of macroscopic lesions in paleopathology	34
3.1	Approaches to diagnosis in paleopathology	46
3.2	Sources of information for generating and refining differential diagnosis	50
3.3	Updated modified Istanbul Terminological Protocol and suggested abbreviations for use in tables of diagnostic criteria	53
3.4	Factors potentially affecting lesion severity, morphology, and distribution in the skeleton	54
3.5	Criteria for indicating certainty in overall diagnosis alongside suggested abbreviations	57
3.6	Factors affecting disease likelihood	57
4.1	Maximum likelihood estimates of k_2 with nominal standard error (SE) and likelihood ratio tests of the hypothesis that $k_2 = 1$ (i.e., no selectivity), in the study of Black Death mortality applying the multistate model produced by Usher (2000)	74
5.1	The hierarchical organization of bone	89

9.1	Selected helminths of humans and their archaeological recovery potential	168
13.1	Summary of characteristics of fracture mechanisms and fracture timing	237
14.1	Terms used in the paleopathological literature to describe variations of skeletal morphology	250
15.1	Types of neoplastic diseases that can affect the skeleton	274
18.1	Physiopathogeny of common specific and non-specific infection observed in skeletal paleopathology	327
18.2	Comparison of percentage skeletal distribution of hematogenous osteomyelitis on two clinical series observed in 1879 and in 2010	330
19.1	Typical sites for hemorrhagic lesions in scurvy	340
19.2	Key lesions of impaired mineralization: Rickets and Osteomalacia	342
19.3	Lesions in anemia	344
24.1	Common biological characteristics used in defining a bimorphic model of sex in humans	437
25.1	'Constants of care'	464
25.2	The four stages of the bioarchaeology of care	466
25.3	Summaries of selected bioarchaeology of care case studies	468
30.1	Frequencies of periodontal disease among caprines in 36 zooarchaeological assemblages from Europe and Southwest Asia Incidence is significantly ($p=0.000$) higher in assemblages from Europe	563
32.1	Most engaging peer-reviewed articles in the <i>International Journal of Paleopathology</i> (as of 27 December 2021) and their category codes	595
32.2	Paleopathology press releases in <i>Science Daily</i> from January–December 2021	597
32.3	Characteristics of paleopathology articles in <i>Forbes</i> (2015–2020)	601
32.4	Pearson correlation of word frequency with popularity of <i>Forbes</i> articles	612
32.5	Frame matrix for <i>Forbes</i> articles related to violence	614
