Contents

Preface.....	ix
Author	xi
Chapter 1	Preliminary Material Part 1: The Path Integral..... 1
1.1	The Classical Action..... 1
1.2	Statistical Mechanics 2
1.3	Classical to Quantum..... 5
1.4	The Feynman Path Integral in Quantum Mechanics 7
1.5	The Feynman-Kac Path Integral and Imaginary Time..... 12
1.6	Problem Sets and Further Reading 14
Chapter 2	The Free Relativistic Particle 15
2.1	The Propagator..... 15
2.2	The Path Integral..... 17
2.3	Random Walks and Universality 21
2.4	ProblemSets and Further Reading 23
Chapter 3	One-Dimensional Quantum Gravity..... 25
3.1	Scalar Fields in One Dimension 25
3.2	Hausdorff Dimension and Scaling Relations..... 30
3.3	Problem Sets and Further Reading 34
Chapter 4	Branched Polymers..... 35
4.1	Definitions and Generalities 35
4.2	Rooted Branched Polymers and Universality..... 37
4.3	The Two-Point Function 39
4.4	Intrinsic Properties of Branched Polymers 42
4.5	Multicritical Branched Polymers..... 44
4.6	Global and Local Hausdorff Dimensions 46
4.7	Problem Sets and Further Reading 47
Chapter 5	Random Surfaces and Bosonic Strings..... 49
5.1	The Action, Green Functions and Critical Exponents 49
5.2	Regularizing the Integration over Geometries 55
5.3	Digression: Summation over Topologies..... 63

5.4	Scaling of the Mass.....	68
5.5	Scaling of the String Tension.....	76
5.6	Problem Sets and Further Reading	79
Chapter 6	Two-Dimensional Quantum Gravity	81
6.1	Solving 2D Quantum Gravity by Counting Geometries.....	81
6.2	Counting Triangulations of the Disk	83
6.3	Multiloops and the Loop-Insertion Operator	92
6.4	Explicit Solution for Bipartite Graphs	93
6.5	The Number of Large Triangulations	96
6.6	The Continuum Limit	99
6.7	Other Universality Classes.....	102
6.8	Appendix.....	104
6.9	Problem Sets and Further Reading	105
Chapter 7	The Fractal Structure of 2D Gravity.....	107
7.1	Universality and the Missing Correlation Length.....	107
7.2	The Two-Loop Propagator.....	107
7.3	The Two-Point Function	114
7.4	The Local Hausdorff Dimension in 2D Gravity	117
7.5	Problem Sets and Further Reading	120
Chapter 8	The Causal Dynamical Triangulation model.....	121
8.1	Lorentzian Versus Euclidean Set Up	121
8.2	Defining and Solving the CDT Model.....	122
8.3	GCDT: Showcasing Quantum Geometry	131
8.4	GCDT Defined as a Scaling Limit of Graphs.....	137
8.5	The Classical Continuum Theory Related to 2D CDT.....	140
8.6	Problem Sets and Further Reading	142
Appendix A	Preliminary Material Part 2: Green Functions.....	145
Appendix B	Problem Sets 1–13.....	161
B.1	Problem Set 1.....	161
B.2	Problem Set 2.....	164
B.3	Problem Set 3.....	167
B.4	Problem Set 4.....	170
B.5	Problem Set 5.....	175
B.6	Problem Set 6.....	178
B.7	Problem Set 7.....	185
B.8	Problem Set 8.....	191
B.9	Problem Set 9.....	195
B.10	Problem Set 10.....	204

B.11 Problem Set 11.....	210
B.12 Problem Set 12.....	217
B.13 Problem Set 13.....	219
Appendix C Solutions to Problem Sets 1–13.....	225
C.1 Solutions to Problem Set 1	225
C.2 Solutions to Problem Set 2	229
C.3 Solutions to Problem Set 3	232
C.4 Solutions to Problem Set 4	235
C.5 Solutions to problem set 5	238
C.6 Solutions to Problem Set 6	243
C.7 Solutions to Problem Set 7	247
C.8 Solutions to Problem Set 8	250
C.9 Solutions to Problem Set 9	252
C.10 Solutions to Problem Set 10	257
C.11 Solutions to Problem Set 11	260
C.12 Solutions to Problem Set 12	263
C.13 Solutions to Problem Set 13	267
