Preface

page xv

Part I Research Methods	1
1 Introduction to Social and Marketing Research	3
1.1 The Role of Information in Science	3
1.1.1 Positivism	4
1.1.2 Research	6
1.1.3 Information and Power	7
1.2 Marketing Research	7
1.2.1 Typical Applications of Marketing Research	10
1.2.2 Some Misconceptions on MR	12
1.3 Sources of Information	13
1.3.1 Primary Sources	13
1.3.2 Secondary Sources	14
1.3.3 Analyzing Secondary Information	16
1.3.4 Database Management	18
1.4 Types of Social and MR Studies	19
1.4.1 Exploratory vs. Conclusive Research	19
1.4.2 Qualitative and Quantitative Research	24
1.5 History of Social and Market Research Methods	26
1.6 Information Systems	28
1.6.1 Decision Support Systems	29
1.6.2 A More General Perspective on Information Systems	30
1.7 Ethics in Social Research	32
1.7.1 Ethics in MR: Scholarly and Professional Concern	33
1.8 Further Resources	34
Part II Qualitative Methods	35
2 Qualitative Research Based on Direct Questioning	37
2.1 What is Qualitative Research?	37
2.1.1 Main Procedures	38
2.1.2 The Quantitative Fallacy	40
2.1.3 Qualitative Biases	43
2.2 Introspection	44

2.3	Depth Interviews	47
2.3.1	Conducting Depth Interviews	50
2.3.2	Special Techniques	51
2.3.3	Online Depth Interviews	56
2.4	Narrative Inquiry and Storytelling	56
2.5	Focus Groups	58
2.5.1	Online Focus Groups	62
2.5.2	Other Types of FGs	63
2.6	Technical Issues in IDIs and FGs	63
2.6.1	Writing the Discussion Agenda (or Script of Questions)	64
2.6.2	Transcriptions	66
2.7	Analysis of Transcripts and Written Texts	70
2.7.1	Content Analysis and Thematic Analysis	70
2.7.2	Linguistic and Discourse Analysis	74
2.7.3	Text Analysis	74
2.7.4	Using Non-verbal Information	76
2.8	Reporting	77
2.9	Case Study Research	77
2.10	Further Resources	80
3	Indirect Questioning in Qualitative Research	83
3.1	Handling Sensitive or Complex Issues	83
3.2	Projective Methods	84
3.2.1	Association Techniques	85
3.2.2	Construction Techniques	88
3.2.3	Completion Techniques	92
3.2.4	Ordering or Choice Techniques	96
3.2.5	Expression Techniques	96
3.3	Creative Methods	98
3.3.1	Brainstorming	98
3.3.2	Delphi Method	99
3.3.3	Other Qualitative Prediction Methods	101
3.4	Further Resources	101
4	Observation Methods	103
4.1	How Can We Use Observation?	103
4.2	Direct Observation of Behavior	105
4.2.1	Naturalistic Observation With a Relatively Passive or Mechanical Observer	105
4.2.2	Active Observer Participation	109
4.3	Indirect Observation (or Trace Analysis) of Behavior	114

4.4	Observation of Digital Behavior	115
4.5	Social Networks Analysis	119
4.5.1	Background on Graph Theory	120
4.5.2	Centrality of a Vertex	122
4.5.3	Models of Network Formation: Random Graphs	130
4.6	Psychophysiology (Biometry)	132
4.6.1	Psychophysical Response	132
4.6.2	Neuropsychology	143
4.6.3	Genetic Research	148
4.7	Further Resources	150
Part III Quantitative Data Analysis		151
5	Uncertainty and Probability	153
5.1	Probability Theory	153
5.1.1	Sets and Sigma Algebras	154
5.1.2	Probability Measure	158
5.1.3	Random Variables/Vectors and Integrals	160
5.1.4	Conditional Probability	168
5.2	Common Probability Distribution Families	170
5.2.1	Univariate Discrete Families	171
5.2.2	Univariate Continuous Families	173
5.2.3	Multivariate Discrete Families	176
5.2.4	Multivariate Continuous Families	178
5.2.5	Continuous Distributions Derived From a Normal Distribution	180
5.3	Convergence of Random Variables and Distributions	185
5.3.1	Laws of Large Numbers	189
5.3.2	Central Limit Theorems	191
5.4	Random Number Generation and Monte Carlo	195
5.5	Stochastic Processes	196
5.5.1	Asymptotic Theory for Stochastic Processes	200
5.5.2	Random Elements on Metric Spaces	202
5.6	Further Resources	203
6	Statistical Analysis I: Parameters and Estimation	205
6.1	Statistical Analysis	205
6.2	Point Estimation	207
6.2.1	Parameters and Point Estimation	208
6.2.2	Finite-Sample Properties of Estimators	212
6.2.3	Asymptotic Properties of Estimators	218
6.3	Some General Families of Estimators	222

6.3.1	M-Estimators	222
6.3.2	Z-Estimators	229
6.3.3	Generalized Method of Moments	231
6.3.4	Numerical Computation	233
6.3.5	Other Related Estimators	235
6.4	Parametric Models	237
6.4.1	Cramér–Rao Bound	238
6.4.2	Maximum Likelihood Estimators	240
6.4.3	Bayesian Estimators	254
6.4.4	Other Parametric Model Estimators	261
6.4.5	Selection of Parametric Models	263
6.4.6	Data Heterogeneity and Mixtures	268
6.5	Nonparametric Density Estimation	270
6.5.1	Histogram	272
6.5.2	Kernel Density Estimators	274
6.5.3	K-Nearest Neighbor Density Estimate	278
6.6	Robustness	279
6.7	Further Resources	280
7	Statistical Analysis II: Confidence Regions and Hypothesis Testing	282
7.1	Statistical Inference	282
7.2	Confidence Intervals and Regions	283
7.2.1	Asymptotic Confidence Intervals	284
7.2.2	Exact Confidence Intervals	290
7.2.3	Confidence Regions for Multiple Parameters	292
7.2.4	Bayesian Confidence Regions	296
7.2.5	Warning on Misleading Interpretations	297
7.3	Hypothesis Testing	298
7.3.1	Significance Tests	300
7.3.2	Asymptotic Significance Tests for a Single Parameter	301
7.3.3	Some Alternatives to Asymptotic Tests	310
7.3.4	Tests for a Vector of Parameters	313
7.3.5	Classical Econometric Tests	316
7.3.6	Questionable Research Practices, Misleading Interpretations, and Controversies	327
7.4	Multiple Testing Methods	331
7.4.1	The Impact of Preliminary Testing on Estimation	334
7.5	Analysis of Variance	339
7.5.1	One-Way ANOVA	339
7.5.2	Fixed vs. Random Effects	341
7.5.3	Two-Way and Multiway ANOVA	343

7.6	Empirical Processes	344
7.6.1	Goodness-of-Fit Tests	348
7.7	Further Resources	349
8	Regression Analysis I: General Linear Model	350
8.1	What Does “Regression” Mean?	350
8.1.1	Regression with Finite Variance	353
8.2	Other Related Curves	356
8.2.1	Best Linear Predictors	356
8.2.2	Modeling Functional Data Discretely Sampled	360
8.3	Estimating the General Linear Model	362
8.3.1	Ordinary Least Squares Estimator	365
8.3.2	Partitioned Regression and Frisch–Waugh–Lovell Theorem	372
8.3.3	Finite Sample Properties of OLS	375
8.3.4	Other Common Estimators Related to Least Squares	381
8.3.5	Linear Dynamic Regression and Distributed Lag Models	392
8.4	Asymptotic Theory for Least Squares	395
8.4.1	Consistency of OLS	395
8.4.2	Asymptotic Normality of OLS	398
8.4.3	Estimating the Asymptotic Covariance Matrix of OLS	401
8.4.4	Bootstrap Approximation	404
8.5	Inference in the General Linear Model	406
8.5.1	Forecasting with Least Squares	406
8.5.2	Testing Linear Hypothesis under Normality	408
8.5.3	Asymptotic Tests	412
8.6	Diagnosis in the General Linear Model	415
8.6.1	Basic Residual Analysis	416
8.6.2	Multicollinearity and Near-Collinearity	416
8.6.3	Structural Change	422
8.6.4	Inferences about Σ using Residuals	422
8.7	Transformations to Achieve Linearity	425
8.8	Dummy Regressors: Reconsidering Classical ANOVA	428
8.8.1	One-Way ANOVA with Fixed Effects	429
8.8.2	Analysis of Covariance and Panels	432
8.8.3	Two-Way and Multiway ANOVA	433
8.8.4	General Random Coefficients and Multi-level Modeling	434
8.9	Further Resources	436
9	Regression Analysis II: Flexible Methods and Machine Learning	438
9.1	Variable Selection in Large Databases	438
9.1.1	Classical Variable Selection	439

9.1.2	Variable Screening Methods	443
9.1.3	Regularization: Ridge, LASSO, and Related Procedures	444
9.2	Nonlinear Parametric Regression Models	448
9.2.1	Nonlinear Least Squares	451
9.2.2	Regression Using Z-Estimators and GMM	453
9.2.3	Maximum Likelihood and Bayes	454
9.2.4	Models for Dependent Variables with Limited Support	457
9.3	Recursive Estimation (Learning); Stochastic Approximation	463
9.4	Nonparametric Regression Estimation	467
9.4.1	Regressograms (Partitions)	470
9.4.2	Kernel Estimators	473
9.4.3	K-Nearest Neighbor Estimators	474
9.4.4	Projections: Sieves Estimators and Regularization Methods	474
9.4.5	Recursive Estimators	480
9.4.6	Machine Learning	481
9.4.7	Ensemble Methods	486
9.5	Quantile Regression	487
9.6	General Test for Goodness-of-Fit	490
9.7	Further Resources	491
10	Multivariate Statistics and Econometrics	494
10.1	Inferences for a Multivariate Normal	494
10.1.1	Correlation and Partial Correlation	498
10.2	Multi-equational Regression Models	501
10.2.1	Linear SURE Models	502
10.2.2	Dynamic SURE Models	509
10.2.3	Nonlinear Multi-equational Regression	513
10.3	Models with Endogeneity	516
10.3.1	Proxies and Measurement Errors	517
10.3.2	Instrumental Variables	518
10.3.3	Control Function Method	523
10.4	Econometric Structural Models: Linear Specifications	524
10.4.1	Identification	528
10.4.2	Estimation with Full Information	534
10.4.3	Estimation with Limited Information	538
10.4.4	Dynamic Linear Structural Models	539
10.5	Econometric Nonlinear Structural Models	540
10.6	Dimension Reduction Methods	543
10.6.1	Principal Components	543
10.6.2	Canonical Correlation (Canonical Variables)	546
10.6.3	Factor Analysis	548

10.6.4	Correspondence Analysis	551
10.6.5	Multidimensional Scaling	552
10.6.6	Dimension Reduction with Nonlinear Relationships	554
10.7	Discriminant Analysis (Supervised Classification/Pattern Recognition)	557
10.7.1	Bayes Rule	558
10.7.2	Parametric Discriminant Analysis	560
10.7.3	Nonparametric and Other Machine Learning Approaches	561
10.8	Cluster Analysis (Unsupervised Classification)	562
10.8.1	Worst-Case and K-Means Methods	563
10.8.2	The EM Algorithm	564
10.9	Further Resources	566
Part IV Quantitative Data Collection		569
11	Quantitative Measurement	571
11.1	Types of Quantitative Data	571
11.1.1	Measurement Theory	572
11.2	Measuring Attitudinal Magnitudes	574
11.3	A Taxonomy of Measurement Scales	577
11.3.1	Distortions Induced by the Scale	580
11.3.2	Stevens's Classification of Scales	582
11.4	Main Attitudinal Scales	586
11.4.1	Nominal Scales	586
11.4.2	Ordinal Scales	592
11.4.3	Interval Scales	617
11.4.4	Ratio Scales	620
11.5	Multi-item Scales and Constructs	622
11.6	Measurement Errors	626
11.6.1	Classical Approach	628
11.6.2	Rasch Model and Item Response Theory	631
11.7	Further Resources	634
12	Sampling Methods	636
12.1	Key Concepts in Sampling	636
12.1.1	Target Population	636
12.1.2	Samples	638
12.2	Sample Representativeness and Biases	641
12.3	Non-probabilistic Sampling	642
12.3.1	Main Types	642
12.3.2	Recruiting Participants for Qualitative Research	645

12.4	Probabilistic Sampling Methods	646
12.4.1	Main Types	646
12.5	Statistical Inference Using Probabilistic Samples	654
12.5.1	Simple Random Sampling	656
12.5.2	Stratified Sampling	667
12.5.3	General Procedures for Non-EPSEM Sampling	670
12.6	Superpopulation Models	678
12.7	Sample Size Selection	681
12.7.1	Optimal Sizes in Stratified Sampling	684
12.8	Nonresponse and Item-Nonresponse	687
12.8.1	Item-Nonresponse and Imputation	689
12.8.2	Dual and Multiple-Frame Sampling	690
12.9	Combined Sampling and Other Shortcuts	690
12.10	Further Resources	691
13	Survey and Questionnaire Design	693
13.1	What is a Survey?	693
13.1.1	Survey Methodologies	693
13.2	Planning a Survey	697
13.2.1	Privacy: Anonymity, Confidentiality, and Disclosure	697
13.2.2	Explicit Informed Consent	700
13.3	Typical Survey Types	701
13.3.1	Personal or Face-to-Face Surveys	701
13.3.2	Telephone Surveys	704
13.3.3	Mail Surveys	706
13.3.4	Web Surveys	707
13.3.5	Summary of Survey Modes and Response Rates	709
13.4	Questionnaires	712
13.4.1	Priming with Accessible Information	713
13.4.2	Question Types	714
13.4.3	How to Build a Good Questionnaire	717
13.4.4	Questions for Sensitive Issues	732
13.4.5	Complementary Elements	741
13.4.6	Language Translations	746
13.5	Sources of Survey Errors	747
13.5.1	Sampling Errors	747
13.5.2	Non-sampling Errors	751
13.6	Data Processing and Analysis	754
13.7	Concluding Remarks	760
13.8	Further Resources	761

14	Experimental Research	763
14.1	What are Experiments?	763
14.2	Historical Overview	766
14.3	Validity of Experimental Inferences	768
14.3.1	Internal Validity	769
14.3.2	External Validity	772
14.4	Field vs. Lab Experiments	774
14.4.1	Laboratory Experiments	774
14.4.2	Field Experiments	775
14.5	Ethics	778
14.6	Typical Types of Experiment	778
14.7	Analysis of Experimental Data	782
14.7.1	Basic Inference Setup	783
14.7.2	Multiple Treatment Experiments	787
14.7.3	Factorial Analysis	788
14.7.4	Response Surface Models	790
14.7.5	Difference in Differences and Dynamics	793
14.8	Randomization	795
14.8.1	Blocking	797
14.8.2	Classical Procedures to Randomize	798
14.9	Optimal Experimental Designs	800
14.10	Quasi-experiments	802
14.10.1	Natural Experiments	803
14.10.2	Potentially Harmful Econometrics	804
14.11	Concluding Remarks	814
14.12	Further Resources	817
Part V	Research Planning and Reporting	819
15	Planning Social Research	821
15.1	First Stage: Cost–Benefit Analysis	821
15.1.1	The Value of Information	822
15.2	Planning the Research Process	827
15.2.1	Program Evaluation and Review Technique	828
15.2.2	Fieldwork Planning	829
15.3	Commissioning MR	831
15.4	Further Resources	832
16	Reporting Social and Market Research Studies	833
16.1	Communicating the Findings	833
16.2	Written Report	834

16.2.1	Report Structure in a MR Report	837
16.2.2	Plagiarism and References	838
16.2.3	Visual Displays	840
16.3	Presentations	843
16.4	Further Resources	845
17	Afterword	846
	<i>Index</i>	847
