	<i>Preface</i>	page ix
	<i>List of Abbreviations</i>	xii
<b>1</b>	<b>Particle Dynamics</b>	<b>1</b>
	1.1 Fundamental Assumptions Underlying Newtonian Dynamics	1
	1.2 Galilean and Non-Galilean Reference Frames	3
	1.3 Dynamics of a Free Particle: Newton's First Law (Principle of Inertia)	6
	1.4 Dynamics of Interacting Particles	7
	1.5 Closing the Formulation of Dynamics: From Mach's Axiomatics to Newton's Laws, and Principle of Determinacy	11
	1.6 Usual Galilean Reference Frames	12
	1.7 Interaction Forces between Particles: Kinematic Dependency	13
	1.8 Contact Forces between Particles and Extended Bodies	15
	1.9 Formulation of Interaction Forces	16
	1.10 Characterization and Limit Conditions of Constraint Forces: Friction Forces	22
	1.11 Dynamics in Non-Galilean Reference Frames: Inertial Forces	28
	1.12 Examples	31
	Appendix 1A: Gravitational Field Outside and Inside the Earth's Surface	36
	Appendix 1B: Dynamics in the Terrestrial Reference Frame (TRF)	39
	Quiz Questions	42
	Exercises	61
	Puzzles	69
	Quiz Questions: Answers	72
	Exercises: Results	72
	Puzzles: Solutions	75
<b>2</b>	<b>Interaction Forces between Rigid Bodies</b>	<b>79</b>
	2.1 Torsor of a System of Forces	80
	2.2 Formulation of Interaction Torsors: Gravitational Torsor, and Torsion Springs, Dampers, and Drivers	82
	2.3 Constraint Torsor between Two Rigid Bodies: Indeterminacy and Ill-Conditioning	85

2.4	Constraint Torsors between Rigid Bodies: Analytical Characterization	94
2.5	Constraint Auxiliary Elements	101
2.6	Constraints in Multibody Systems: Indeterminacy and Ill-Conditioning	109
2.7	Limit Conditions in Multiple-Point Unilateral Constraints: Contact Loss and Overturning	117
2.8	Additional Limit Conditions: Sliding, Rolling, and Pivoting	120
	Appendix 2A: Gravitational Moments	124
	Quiz Questions	126
	Puzzles	145
	Quiz Questions: Answers	147
	Puzzles: Solutions	147
<b>3</b>	<b>Mass Distribution</b>	151
3.1	Center of Mass	151
3.2	Analytical Calculation of the Center of Mass: Pappus–Guldin Theorems	153
3.3	Inertia Tensor	158
3.4	Steiner’s Theorem	162
3.5	Rotation of Axes	166
3.6	Principal Directions of Inertia: Symmetrical and Spherical Rotors	167
3.7	Practical Tips to Calculate the Inertia Tensor about a Point Q	174
3.8	Inertia Ellipsoid	179
	Quiz Questions	183
	Exercises	196
	Quiz Questions: Answers	200
	Exercises: Results	200
<b>4</b>	<b>Vector Theorems</b>	202
4.1	Linear Momentum Theorem in Galilean Reference Frames	203
4.2	Angular Momentum Theorem in Galilean Reference Frames	206
4.3	Barycentric Decomposition of the Angular Momentum	212
4.4	Angular Momentum of a Rigid Body	214
4.5	Dynamic Properties of the Principal Axes of Inertia (PAI)	227
4.6	Time Integral of the Vector Theorems: Force Impulse and Angular Impulse	234
4.7	Vector Theorems in General Non-Galilean Reference Frames	238
	Appendix 4A: Static and Dynamic Balancing of a Rotor	244
	Quiz Questions	248
	Exercises	276
	Puzzles	302
	Quiz Questions: Answers	305

	Exercises: Results	305
	Puzzles: Solutions	312
<b>5</b>	<b>Work–Energy Theorem</b>	<b>316</b>
	5.1 Work–Energy Theorem: Kinetic Energy, Work and Power done by a Force	317
	5.2 Barycentric Decomposition of the Kinetic Energy	319
	5.3 Work–Energy Theorem in Non-Galilean Reference Frames with Translational Motion Relative to a Galilean Frame	320
	5.4 Kinetic Energy of a Rigid Body	322
	5.5 Work Associated with the Internal Forces	327
	5.6 Work Associated with the Forces on a Rigid Body	333
	5.7 Work Associated with External Constraint and Friction Forces	334
	5.8 Work Associated with Conservative Forces: Conservative Systems	336
	5.9 Potential Energy	338
	5.10 One-DoF Systems with Constant Mechanical Energy: Equilibrium Configurations and Stability	344
	5.11 The Utopia of Perpetual Motion	348
	5.12 Work–Energy Theorem in Non-Galilean Reference Frames	353
	Appendix 5A: Rotation Stability in a Free Rigid Body	357
	Quiz Questions	361
	Exercises	383
	Puzzles	398
	Quiz Questions: Answers	400
	Exercises: Results	400
	Puzzles: Solutions	404
<b>6</b>	<b>The Method of Virtual Power</b>	<b>406</b>
	6.1 D’Alembert Inertial Forces: Formulation of the Method of Virtual Power	406
	6.2 The Equations of Motion through the MVP	408
	6.3 The Constraint Forces through the MVP	411
	6.4 Torsor of D’Alembert Inertial Forces in a Rigid Body	414
	Quiz Questions	425
	Exercises	440
	Puzzles	454
	Quiz Questions: Answers	456
	Exercises: Results	456
	Puzzles: Solutions	460
<b>7</b>	<b>Lagrange’s Equations</b>	<b>463</b>
	7.1 Generalized Forces in the Method of Virtual Power	463
	7.2 Components of the Generalized D’Alembert Inertial Force	464

7.3	Components of the Generalized Conservative Force	467
7.4	Lagrange's Equations	468
7.5	Constraint Forces from Lagrange's Equations	472
7.6	Lagrange's Equations with Multipliers	474
7.7	Hamilton's Principle	478
	Appendix 7A: Equilibrium Configurations	479
	Quiz Questions	482
	Exercises	494
	Quiz Questions: Answers	502
	Exercises: Results	502
<b>8</b>	<b>Introduction to Percussive Dynamics</b>	<b>504</b>
8.1	Introduction to Percussive Problems	504
8.2	Percussive Behavior of Constraints	510
8.3	Percussions Associated with Dry Friction	514
8.4	Percussive Formulation of the Vector Theorems	515
8.5	Percussion Center	519
8.6	Percussive Formulation of the Work–Energy Theorem	520
8.7	Energy Balance: Newton's Restitution Rule	523
8.8	Percussive Formulation of the Method of Virtual Power	531
8.9	Percussive Formulation of Lagrange's Equations	533
8.10	Multiple-Point Collisions	537
	Appendix 8A: Rough Collisions	540
	Quiz Questions	544
	Exercises	563
	Puzzles	574
	Quiz Questions: Answers	575
	Exercises: Results	575
	Puzzles: Solutions	577
	<i>Bibliography</i>	579
	<i>Further Reading</i>	579
	<i>Index</i>	580
