

# **Hydrogeology**

Principles and Practice

Third Edition

*Kevin M. Hiscock and Victor F. Bense*

**WILEY** Blackwell

## Contents

List of colour plates	<i>xi</i>
List of boxes	<i>xvii</i>
Preface to the third edition	<i>xix</i>
Preface to the second edition	<i>xxi</i>
Preface to the first edition	<i>xxii</i>
Acknowledgements	<i>xxiii</i>
Symbols and abbreviations	<i>xxiv</i>
About the companion website	<i>xxvii</i>

### 1 Introduction 1

1.1	Scope of this book	1
1.2	What is hydrogeology?	3
1.3	Early examples of groundwater exploitation	3
1.4	History of hydrogeology	6
1.5	The water cycle	14
1.5.1	Groundwater occurrence in the upper continental crust	16
1.5.2	Groundwater-related tipping points	16
1.5.3	Groundwater discharge to the oceans	17
1.5.4	Global groundwater material and elemental fluxes	18
1.5.5	Human influence on the water cycle	19
1.6	Global groundwater resources	20
1.6.1	Global groundwater abstraction	21
1.6.2	Global groundwater depletion and sea level rise	25
1.7	Groundwater resources in developed countries	25
1.7.1	Groundwater abstraction in the United Kingdom	26
1.7.2	Groundwater abstraction in Europe	29
1.7.3	Groundwater abstraction in North America	31
1.7.4	Groundwater abstraction in China	33
1.8	Groundwater resources in developing countries	37
	Further reading	43
	References	43

### 2 Physical hydrogeology 51

2.1	Introduction	51
2.2	Porosity	51
2.3	Hydraulic conductivity	54

2.4	Isotropy and homogeneity	56
2.5	Aquifers, aquitards and aquicludes	56
2.6	Darcy's Law	58
2.6.1	Hydraulic properties of fractured rocks	61
2.6.2	Karst aquifer properties	64
2.6.3	Sinkholes and land subsidence	67
2.7	Groundwater potential and hydraulic head	71
2.8	Interpretation of hydraulic head and groundwater conditions	73
2.8.1	Groundwater flow direction	73
2.8.2	Water table and potentiometric surface maps	75
2.8.3	Types of groundwater conditions	82
2.9	Transmissivity and storativity of confined aquifers	89
2.9.1	Release of water from confined aquifers	89
2.10	Transmissivity and specific yield of unconfined aquifers	99
2.11	Equations of groundwater flow	99
2.11.1	Steady-state saturated flow	99
2.11.2	Transient saturated flow	100
2.11.3	Transient unsaturated flow	101
2.12	Analytical solution of one-dimensional groundwater flow problems	102
2.13	Groundwater flow patterns	106
2.14	Classification of springs and intermittent streams	108
2.15	Transboundary aquifer systems	119
2.16	Submarine groundwater discharge	127
2.17	Groundwater resources of the world	132
2.18	Hydrogeological environments of the United Kingdom	135
2.18.1	Sedimentary rocks	137
2.18.2	Metamorphic rocks	142
2.18.3	Igneous rocks	142
	Further reading	142
	References	143
<b>3</b>	<b>Groundwater and geological processes</b>	<b>150</b>
3.1	Introduction	150
3.2	Geological processes driving fluid flow	150
3.3	Topography-driven flow in the context of geological processes	151
3.4	Compaction-driven fluid flow	151
3.5	Variable-density driven fluid flow	156
3.5.1	Salinity gradients leading to variable-density flow	156
3.5.2	Hydrothermal systems driven by variable-density flow	160
3.6	Regional groundwater flow systems driven predominantly by variable-density flow	163
3.6.1	Fluctuating sea-level and its impact on the distribution of groundwater salinity in coastal areas	164
3.6.2	Brines in continental aquifers	167
3.7	Regional groundwater flow systems driven predominantly by shifting topography and stress changes	168
3.7.1	Mountain building and erosion	168
3.7.2	Impact of glaciations on regional hydrogeology	169

3.8	Coupling and relative importance of processes driving fluid flow	174
	Further reading	175
	References	175
<b>4</b>	<b>Chemical hydrogeology</b>	<b>177</b>
4.1	Introduction	177
4.2	Properties of water	177
4.3	Chemical composition of groundwater	179
4.4	Sequence of hydrochemical evolution of groundwater	182
4.5	Groundwater sampling and graphical presentation of hydrochemical data	193
4.6	Concept of chemical equilibrium	201
4.6.1	Kinetic approach to chemical equilibrium	201
4.6.2	Energetic approach to chemical equilibrium	203
4.7	Carbonate chemistry of groundwater	204
4.8	Adsorption and ion exchange	216
4.9	Redox chemistry	224
4.10	Groundwater in crystalline rocks	230
4.11	Geochemical modelling	238
	Further reading	244
	References	244
<b>5</b>	<b>Environmental isotope hydrogeology</b>	<b>249</b>
5.1	Introduction	249
5.2	Stable isotope chemistry and nomenclature	249
5.3	Stable isotopes of water	250
5.4	Stable isotopes of nitrogen and sulphur	257
5.4.1	Nitrogen stable isotopes	257
5.4.2	Sulphur stable isotopes	261
5.5	Age dating of groundwater	264
5.5.1	Law of radioactive decay	265
5.5.2	$^{14}\text{C}$ dating	265
5.5.3	$^{36}\text{Cl}$ dating	269
5.5.4	Tritium dating	270
5.5.5	$^3\text{H}/^3\text{He}$ dating	273
5.6	Noble gases	275
	Further reading	280
	References	280
<b>6</b>	<b>Groundwater and catchment processes</b>	<b>286</b>
6.1	Introduction	286
6.2	Water balance equation	286
6.3	Precipitation and evapotranspiration	288
6.3.1	Precipitation measurement	289
6.3.2	Evapotranspiration measurement and estimation	291
6.4	Soil water and infiltration	296
6.4.1	Soil moisture content and soil water potential	296
6.4.2	Calculation of drainage and evaporation losses	301

6.4.3	Infiltration theory and measurement	303
6.5	Recharge estimation	306
6.5.1	Borehole hydrograph method	307
6.5.2	Soil moisture budget method	308
6.5.3	Chloride budget method	310
6.5.4	Temperature profile methods	312
6.6	Stream gauging techniques	318
6.6.1	Velocity area methods	319
6.6.2	Dilution gauging	324
6.6.3	Ultrasonic, electromagnetic and integrating float methods	325
6.6.4	Slope-area method	325
6.6.5	Weirs and flumes	327
6.7	Hydrograph analysis	328
6.7.1	Quickflow and baseflow separation	328
6.7.2	Unit hydrograph theory	331
6.8	Surface water – groundwater interaction	335
6.8.1	Temperature-based methods of detection	338
6.8.2	Simulating river flow depletion	341
	Further reading	348
	References	348
<b>7</b>	<b>Groundwater investigation techniques</b>	<b>353</b>
7.1	Introduction	353
7.2	Measurement and interpretation of groundwater level data	353
7.2.1	Water-level measurement	353
7.2.2	Well and borehole design and construction methods	356
7.2.3	Borehole hydrographs and barometric efficiency	357
7.2.4	Construction of groundwater level contour maps	362
7.3	Field estimation of aquifer properties	363
7.3.1	Piezometer tests	363
7.3.2	Pumping tests	364
7.3.3	Tracer tests	379
7.3.4	Downhole geophysical techniques	386
7.3.5	Surface geophysical techniques	391
7.4	Remote sensing methods	395
7.5	Groundwater modelling	396
	Further reading	402
	References	402
<b>8</b>	<b>Groundwater quality and contaminant hydrogeology</b>	<b>409</b>
8.1	Introduction	409
8.2	Water quality standards	411
8.2.1	Water hardness	414
8.2.2	Irrigation water quality	416
8.3	Transport of contaminants in groundwater	418
8.3.1	Transport of non-reactive dissolved contaminants	418
8.3.2	Transport of reactive dissolved contaminants	423

8.3.3	Transport of non-aqueous phase liquids	435
8.3.4	Effects of density and heterogeneity	442
8.4	Sources of groundwater contamination	443
8.4.1	Urban and industrial contaminants	443
8.4.2	Municipal landfill wastes	454
8.4.3	Faecal, domestic and cemetery wastes	460
8.4.4	Microplastic contamination	464
8.4.5	Agricultural contaminants	466
8.4.6	Saline water intrusion in coastal aquifers	474
8.4.7	Saline water intrusion on small oceanic islands	480
	Further reading	483
	References	483
<b>9</b>	<b>Groundwater pollution remediation and protection</b>	<b>491</b>
9.1	Introduction	491
9.2	Groundwater pollution remediation techniques	491
9.2.1	Pump-and-treat	492
9.2.2	Permeable reactive barriers	498
9.2.3	Monitored natural attenuation	499
9.3	Groundwater pollution protection strategies in developed countries	503
9.3.1	Groundwater vulnerability mapping and aquifer resource protection	503
9.3.2	Source protection zones	507
9.3.3	Risk assessment methods	510
9.3.4	Groundwater vulnerability assessment and mapping for the protection of carbonate (karstic) aquifers	514
9.3.5	Spatial planning and groundwater protection	518
9.4	Groundwater protection strategies in developing countries	521
	Further reading	528
	References	529
<b>10</b>	<b>Groundwater resources, governance and management</b>	<b>533</b>
10.1	Introduction	533
10.2	Groundwater resources schemes	533
10.2.1	Large-scale groundwater development schemes	534
10.2.2	Regional-scale groundwater development schemes	537
10.2.3	Managed aquifer recharge	540
10.2.4	Horizontal well schemes	554
10.3	Wetland hydrogeology	555
10.3.1	Impacts of groundwater exploitation on wetlands	556
10.3.2	Hydrogeology of dune slacks	564
10.4	Climate change and groundwater resources	567
10.4.1	Groundwater response time to climate change	579
10.4.2	Groundwater pumping and greenhouse gas emissions	580
10.4.3	Impact of climate change on cold-region hydrogeology	580
10.4.4	Adaptation to climate change	583
10.5	Groundwater and energy resources	588
10.5.1	Geothermal energy	588

10.5.2	Ground source heat pumps	592
10.5.3	Groundwater and shale gas exploration	594
10.6	Future challenges for groundwater governance and management	598
	Further reading	600
	References	601
Appendix 1	Conversion factors	612
Appendix 2	Properties of water in the range 0–100°C	614
Appendix 3	The geological timescale	615
Appendix 4	Symbols, atomic numbers and atomic weights	617
Appendix 5	Composition of seawater and rainwater	621
Appendix 6	Values of $W(u)$ for various values of $u$	626
Appendix 7	Values of $q/Q$ and $v/Qt$ corresponding to selected values of $t/F$ for use in computing the rate and volume of stream depletion by wells and boreholes	627
Appendix 8	Complementary error function	629
Appendix 9	Drinking water quality standards and Lists I and II substances	631
Appendix 10	Review questions and exercises	638
