# CONTENTS

<b>Preface</b>	<b>xv</b>
<b>First Edition Preface</b>	<b>xvii</b>
<b>1 Fundamental Principles</b>	<b>1</b>
1.1 Reaction Mechanisms and Their Importance	1
1.2 Elementary (Concerted) and Stepwise Reactions	2
1.3 Molecularity	4
1.3.1 Unimolecular Reactions	4
1.3.2 Bimolecular Reactions	5
1.4 Kinetics	6
1.4.1 Rate-Laws for Elementary (Concerted) Reactions	6
1.4.2 Reactive Intermediates and the Steady-State Assumption	9
1.4.3 Rate-Laws for Stepwise Reactions	12
1.5 Thermodynamics	13
1.5.1 Enthalpy, Entropy, and Free Energy	13
1.5.2 Reversible and Irreversible Reactions	14
1.5.3 Chemical Equilibrium	15
1.6 The Transition State	17
1.6.1 The Transition State and Activation Energy	17
1.6.2 The Hammond Postulate	18
1.6.3 The Bell–Evans–Polanyi Principle	19
1.7 Electronic Effects and Hammett Equation	20
1.7.1 Electronic Effects of Substituents	20
1.7.2 Hammett Equation	21

1.8	The Molecular Orbital Theory	23
1.8.1	Formation of Molecular Orbitals from Atomic Orbitals	23
1.8.2	Molecular Orbital Diagrams	28
1.8.3	Resonance Stabilization	30
1.8.4	Frontier Molecular Orbitals	32
1.9	Electrophiles/Nucleophiles Versus Acids/Bases	33
1.9.1	Common Electrophiles	34
1.9.2	Common Nucleophiles	38
1.10	Isotope Labeling	39
1.11	Enzymes: Biological Catalysts	43
1.12	The Green Chemistry Methodology	46
	Problems	49
	References	51
<b>2</b>	<b>The Aliphatic C–H Bond Functionalization</b>	<b>53</b>
2.1	Alkyl Radicals: Bonding and Their Relative Stability	54
2.2	Radical Halogenations of the C–H Bonds on $sp^3$ -Hybridized Carbons: Mechanism and Nature of the Transition States	59
2.3	Energetics of the Radical Halogenations of Alkanes and Their Regioselectivity	63
2.3.1	Energy Profiles for Radical Halogenation Reactions of Alkanes	63
2.3.2	Regioselectivity for Radical Halogenation Reactions	64
2.4	Kinetics of Radical Halogenations of Alkanes	68
2.4.1	Alkanes	68
2.4.2	Hydrocarbons Containing an Unsaturated Group	70
2.5	Radical Initiators	73
2.5.1	Azobisisobutyronitrile (AIBN)	73
2.5.2	Dibenzol Peroxide	74
2.6	Transition-Metal-Compounds Catalyzed Alkane C–H Bond Activation and Functionalization	76
2.6.1	The C–H Bond Activation via Agostic Bond	76
2.6.2	Mechanisms for the C–H Bond Oxidative Functionalization	77
2.7	Superacids Catalyzed Alkane C–H Bond Activation and Functionalization	80
2.8	Nitration of the Aliphatic C–H Bonds via the Nitronium $NO_2^+$ Ion	84
2.9	Photochemical and Thermal C–H Bond Activation by the Oxidative Uranyl $UO_2^{2+}$ (VI) Cation	86
2.10	Enzyme Catalyzed Alkane C–H Bond Activation and Functionalization: Biochemical Methods	88
	Problems	91
	References	93

<b>3</b>	<b>Functionalization of the Alkene C=C Bond by Electrophilic Additions</b>	<b>95</b>
3.1	Markovnikov Additions via Intermediate Carbocations	96
3.1.1	Protonation of the Alkene C=C $\pi$ Bond by Strong Acids to form Carbocations	96
3.1.2	Additions of Hydrogen Halides (HCl, HBr, and HI) to Alkenes: Mechanism, Regiochemistry, and Stereochemistry	98
3.1.3	Acid and Transition-Metal Catalyzed Hydration of Alkenes and Its Applications	103
3.1.4	Acid Catalyzed Additions of Alcohols to Alkenes	108
3.1.5	Special Electrophilic Additions of the Alkene C=C Bond: Mechanistic and Synthetic Aspects	109
3.1.6	Electrophilic Addition to the C $\equiv$ C Triple Bond via a Vinyl Cation Intermediate	113
3.2	Electrophilic Addition of Hydrogen Halides to Conjugated Dienes	114
3.3	Non-Markovnikov Radical Addition	116
3.4	Hydroboration: Concerted, Non-Markovnikov <i>syn</i> -Addition	117
3.4.1	Diborane (B <sub>2</sub> H <sub>6</sub> ): Structure and Properties	117
3.4.2	Concerted, Non-Markovnikov <i>syn</i> -Addition of Borane (BH <sub>3</sub> ) to the Alkene C=C Bond: Mechanism, Regiochemistry, and Stereochemistry	118
3.4.3	Synthesis of Special Hydroborating Reagents	122
3.4.4	Reactions of Alkenes with Special Hydroborating Reagents: Regiochemistry, Stereochemistry, and Their Applications in Chemical Synthesis	123
3.5	Transition-Metal Catalyzed Hydrogenation of the Alkene C=C Bond ( <i>syn</i> -Addition)	126
3.5.1	Mechanism and Stereochemistry	127
3.5.2	Synthetic Applications	130
3.5.3	Biochemically Related Applications: Hydrogenated Fats (Oils)	132
3.6	Halogenation of the Alkene C=C Bond (Anti-Addition): Mechanism and its Stereochemistry	133
	Problems	138
	References	141
<b>4</b>	<b>Functionalization of the Alkene C=C Bond by Cycloaddition Reactions</b>	<b>143</b>
4.1	Cycloaddition of the Alkene C=C Bond to Form Three-Membered Rings	144
4.1.1	Epoxidation	144
4.1.2	Cycloadditions via Carbenes and Related Species	146
4.2	Cycloadditions to Form Four-Membered Rings	150

4.3	Diels–Alder Cycloadditions of the Alkene C=C Bond to Form Six-Membered Rings	153
4.3.1	Frontier Molecular Orbital Interactions	155
4.3.2	Substituent Effects	158
4.3.3	Other Diels–Alder Reactions	160
4.4	1,3-Dipolar Cycloadditions of the C=C and Other Multiple Bonds to Form Five-Membered Rings	167
4.4.1	Oxidation of Alkenes by Ozone (O <sub>3</sub> ) and Osmium Tetraoxide (OsO <sub>4</sub> ) via Cycloadditions	167
4.4.2	Cycloadditions of Nitrogen-Containing 1,3-Dipoles to Alkenes	171
4.4.3	Cycloadditions of the Dithionitronium (NS <sub>2</sub> <sup>+</sup> ) Ion to Alkenes, Alkynes, and Nitriles: Making CNS-Containing Aromatic Heterocycles	173
4.5	Other Pericyclic Reactions	181
4.5.1	Conjugated Trienes	181
4.5.2	The Cope Rearrangement	182
4.5.3	Conjugate Dienes	184
4.5.4	The 4π-Cycloaddition Between the N=N Bonds	185
4.5.5	The 4π-Cycloaddition of Buckminsterfullerene C <sub>60</sub>	185
4.6	Diels–Alder Cycloadditions in Water: The Green Chemistry Methods	186
4.7	Biological Applications	192
4.7.1	Photochemical Synthesis of Vitamin D <sub>2</sub> via a Cyclic Transition State	192
4.7.2	Ribosome-Catalyzed Peptidyl Transfer via a Cyclic Transition State: Biosynthesis of Proteins	192
	Problems	195
	References	197
<b>5</b>	<b>The Aromatic C–H Bond Functionalization and Related Reactions</b>	<b>199</b>
5.1	Aromatic Nitration: All Reaction Intermediates and Full Mechanism for the Aromatic C–H Bond Substitution by Nitronium (NO <sub>2</sub> <sup>+</sup> ) and Related Electrophiles	200
5.1.1	Charge-Transfer Complex [ArH, NO <sub>2</sub> <sup>+</sup> ] Between Arene and Nitronium	201
5.1.2	Ion-Radical Pair [ArH <sup>+</sup> , NO <sub>2</sub> <sup>·</sup> ]	202
5.1.3	Arenium [Ar(H)NO <sub>2</sub> ] <sup>+</sup> Ion	202
5.1.4	Full Mechanism for Aromatic Nitration	203
5.2	Mechanisms and Synthetic Utility for Aromatic C–H Bond Substitutions by other Related Electrophiles	204
5.3	The Iron (III) Catalyzed Electrophilic Aromatic C–H Bond Substitution	212

5.4	The Electrophilic Aromatic C—H Bond Substitution Reactions via $S_N1$ and $S_N2$ Mechanisms	219
5.4.1	Reactions Involving $S_N1$ Steps	219
5.4.2	Reactions Involving $S_N2$ Steps	224
5.5	Substituent Effects on the Electrophilic Aromatic Substitution Reactions	225
5.5.1	<i>Ortho</i> - and <i>para</i> -Directors	227
5.5.2	<i>Meta</i> -Directors	229
5.6	Isomerizations Effected by the Electrophilic Aromatic Substitution Reactions	231
5.7	Electrophilic Substitution Reactions on the Aromatic Carbon—Metal Bonds: Mechanisms and Synthetic Applications	235
5.7.1	Aryl Grignard and Aryllithium Compounds	236
5.7.2	<i>Ortho</i> -Metallation-Directing Groups ( <i>o</i> -MDGs): Mechanism and Synthetic Applications	237
5.8	Nucleophilic Aromatic Substitution via a Benzyne (Aryne) Intermediate: Functional Group Transformations on Aromatic Rings	239
5.9	Nucleophilic Aromatic Substitution via an Anionic Meisenheimer Complex	243
5.10	Biological Applications of Functionalized Aromatic Compounds	247
	Problems	251
	References	254
<b>6</b>	<b>Nucleophilic Substitutions on <math>sp^3</math>-Hybridized Carbons: Functional Group Transformations</b>	<b>257</b>
6.1	Nucleophilic Substitution on Mono-Functionalized $sp^3$ -Hybridized Carbon	257
6.2	Functional Groups which are Good and Poor Leaving Groups	259
6.3	Good and Poor Nucleophiles	261
6.4	$S_N2$ Reactions: Kinetics, Mechanism, and Stereochemistry	263
6.4.1	Mechanism and Stereochemistry for $S_N2$ Reactions	263
6.4.2	Steric Hindrance on $S_N2$ Reactions	266
6.4.3	Effect of Nucleophiles	269
6.4.4	Solvent Effect	271
6.4.5	Effect of Unsaturated Groups Attached to the Functionalized Electrophilic Carbon	272
6.5	Analysis of the $S_N2$ Mechanism Using Symmetry Rules and Molecular Orbital Theory	273
6.5.1	The $S_N2$ Reactions of Methyl and Primary Haloalkanes $RCH_2X$ ( $X = Cl, Br, \text{ or } I$ ; $R = H$ or an Alkyl Group)	273
6.5.2	Reactivity of Dichloromethane $CH_2Cl_2$	276

6.6	$S_N1$ Reactions: Kinetics, Mechanism, and Product Development	278
6.6.1	The $S_N1$ Mechanism and Rate Law	278
6.6.2	Solvent Effect	280
6.6.3	Effects of Carbocation Stability and Quality of Leaving Group on the $S_N1$ Rates	280
6.6.4	Product Development for $S_N1$ Reactions	284
6.7	Competitions Between $S_N1$ and $S_N2$ Reactions	286
6.8	Some Useful $S_N1$ and $S_N2$ Reactions: Mechanisms and Synthetic Perspectives	290
6.8.1	Nucleophilic Substitution Reactions Effected by Carbon Nucleophiles	291
6.8.2	Synthesis of Primary Amines	295
6.8.3	<i>Synthetic Utility of Triphenylphosphine: A Strong Phosphorus Nucleophile</i>	296
6.8.4	Neighboring Group-Assisted $S_N1$ Reactions	297
6.8.5	Nucleophilic Substitution Reactions of Alcohols Catalyzed by Solid Bronsted Acids: A Green Chemistry Approach	301
6.9	Biological Applications of Nucleophilic Substitution Reactions	303
6.9.1	Biomedical Applications	303
6.9.2	Glycoside Hydrolases: Enzymes Catalyzing Hydrolytic Cleavage of the Glycosidic Bonds by the $S_N2$ -Like Reactions	304
6.9.3	Biosynthesis Involving Nucleophilic Substitution Reactions	309
6.9.4	An Enzyme-Catalyzed Nucleophilic Substitution of an Haloalkane	310
	Problems	312
	References	314
<b>7</b>	<b>Eliminations</b>	<b>317</b>
7.1	<i>E2 Elimination: Bimolecular <math>\beta</math>-Elimination of H/LG and its Regiochemistry and Stereochemistry</i>	318
7.1.1	Mechanism and Regiochemistry	318
7.1.2	$E2$ Eliminations of Functionalized Cycloalkanes	322
7.1.3	Stereochemistry	325
7.2	Analysis of the $E2$ Mechanism Using Symmetry Rules and Molecular Orbital Theory	326
7.2.1	Chain-Like Haloalkanes	326
7.2.2	Halocyclohexane	327
7.2.3	Quantitative Theoretical Studies of $E2$ Reactions	331
7.3	Basicity Versus Nucleophilicity for Various Anions	332
7.4	Competition of $E2$ and $S_N2$ Reactions	334

7.5	E1 Elimination: Stepwise $\beta$ -Elimination of H/LG via an Intermediate Carbocation and its Rate-Law	336
7.5.1	Mechanism and Rate Law	336
7.5.2	E1 Dehydration of Alcohols	338
7.6	Energy Profiles for E1 Reactions	339
7.6.1	The Bell–Evans–Polanyi Principle	339
7.6.2	The E1 Dehydration of Alcohols (ROH)	340
7.6.3	The E1 Dehydrohalogenation of Haloalkanes (RX, X = Cl, Br, or I)	342
7.7	The E1 Elimination of Ethers	344
7.8	Intramolecular (Unimolecular) Eliminations via Cyclic Transition States	345
7.8.1	Concerted, <i>syn</i> -Elimination of Esters	345
7.8.2	Selenoxide Elimination	347
7.8.3	Silyloxy Elimination	347
7.8.4	Unimolecular $\beta$ -Elimination of Hydrogen Halide from Haloalkanes	348
7.9	Mechanisms for Reductive Elimination of LG <sup>1</sup> /LG <sup>2</sup> (Two Functional Groups) on Adjacent Carbons	349
7.10	The $\alpha$ -Elimination Giving a Carbene: A Mechanistic Analysis Using Symmetry Rules and Molecular Orbital Theory	353
7.10.1	The Bimolecular $\alpha$ -Elimination of Trichloromethane (CHCl <sub>3</sub> ) Giving Dichlorocarbene (CCl <sub>2</sub> )	353
7.10.2	Formation of a Carbene by Unimolecular $\alpha$ -Elimination of a Haloalkane and the Subsequent Rearrangement to an Alkene via a C–H (C–D) Bond Elimination	356
7.11	E1cb Elimination	356
7.12	Biological Applications: Enzyme-Catalyzed Biological Elimination Reactions	358
7.12.1	The Enzyme-Catalyzed $\beta$ -Oxidation of Fatty Acyl Coenzyme A	358
7.12.2	Elimination Reactions Involved in Biosynthesis	360
	Problems	362
	References	364
<b>8</b>	<b>Nucleophilic Additions and Substitutions on Carbonyl Groups</b>	<b>367</b>
8.1	Nucleophilic Additions and Substitutions of Carbonyl Compounds	367
8.2	Nucleophilic Additions of Aldehydes and Ketones and Their Biological Applications	370
8.2.1	Acid and Base Catalyzed Hydration of Aldehydes and Ketones	370

8.2.2	Acid Catalyzed Nucleophilic Additions of Alcohols to Aldehydes and Ketones	373
8.2.3	Biological Applications: Cyclic Structures of Carbohydrates	376
8.2.4	Addition of Sulfur Nucleophile to Aldehydes	379
8.2.5	Nucleophilic Addition of Amines to Ketones and Aldehydes	381
8.2.6	Nucleophilic Additions of Hydride Donors to Aldehydes and Ketones: Organic Reductions and Mechanisms	384
8.3	Biological Hydride Donors NAD(P)H and FADH <sub>2</sub>	386
8.4	Activation of Carboxylic Acids via Nucleophilic Substitutions on the Carbonyl Carbons	390
8.4.1	Reactions of Carboxylic Acids with Thionyl Chloride	390
8.4.2	Esterification Reactions, Synthetic Applications, and Green Chemistry Methods	391
8.4.3	Formation of Anhydrides	396
8.4.4	Nucleophilic Addition with Alkylolithium	396
8.5	Nucleophilic Substitutions of Acyl Derivatives and Their Biological Applications	398
8.5.1	Nucleophilic Substitutions of Acyl Chlorides and Anhydrides	398
8.5.2	Hydrolysis and Other Nucleophilic Substitutions of Esters	400
8.5.3	Biodiesel Synthesis and Reaction Mechanism	401
8.5.4	Biological Applications: Mechanisms of Serine-Type Hydrolases	403
8.6	Reduction of Acyl Derivatives by Hydride Donors	409
8.7	Kinetics of the Nucleophilic Addition and Substitution of Acyl Derivatives	410
	Problems	413
	References	416
<b>9</b>	<b>Reactivity of the <math>\alpha</math>-Hydrogen to Carbonyl Groups</b>	<b>417</b>
9.1	Formation of Enolates and Their Nucleophilicity	417
9.1.1	Formation of Enolates	417
9.1.2	Molecular Orbitals and Nucleophilicity of Enolates	421
9.2	Alkylation of Carbonyl Compounds (Aldehydes, Ketones, and Esters) via Enolates and Hydrazones	423
9.2.1	Alkylation via Enolates	423
9.2.2	Alkylation via Hydrazones and Enamines	425
9.3	Aldol Reactions	427
9.3.1	Mechanism and Synthetic Utility	427
9.3.2	Stereoselectivity	435

9.3.3	Other Synthetic Applications	439
9.4	Acylation Reactions of Esters via Enolates: Mechanism and Synthetic Utility	444
9.5	Biological Applications: Roles of Enolates in Metabolic Processes in Living Organisms	448
9.5.1	The Citric Acid Cycle and Mechanism for Citrate Synthase	449
9.5.2	Ketogenesis and Thiolase	451
	Problems	452
