<i>Preface to the Second Edition</i>	<i>xv</i>
<i>Acknowledgments</i>	<i>xvii</i>
<i>About the Companion Website</i>	<i>xix</i>

Chapter 1 The Structure of Matter	1
1.1 Science as an Art Form	1
1.2 Atomism	5
1.3 The Anatomy of an Atom	8
1.4 The Periodic Table of the Elements	14
1.5 The Nucleus	17
1.6 Nuclear Reactions	20
1.7 Radioactive Decay and the Band of Stability	23
1.8 The Shell Model of the Nucleus	29
1.9 The Origin of the Elements	32
1.9.1 The Big Bang	32
1.9.2 Big Bang Nucleosynthesis	32
1.9.3 Stellar Nucleosynthesis	33
1.9.4 The s-Process and the r-Process	37
Exercises	39
Bibliography	41
Chapter 2 The Structure of the Atom	43
2.1 The Wave-Like Properties of Light	43
2.2 The Electromagnetic Spectrum	44
2.3 The Interference of Waves	45
2.4 The Line Spectrum of Hydrogen	48
2.5 Energy Levels in Atoms	51
2.6 The Bohr Model of the Atom	54
2.6.1 In-Depth: Derivation of the Bohr Model of the Atom	56
2.7 The Wave-Like Properties of Matter	60
2.8 Circular Standing Waves and the Quantization of Angular Momentum	62
2.9 The Classical Wave Equation	64
2.10 The Particle in a Box Model	65
2.10.1 In-Depth: The Quantum Mechanical Behavior of Nanoparticles	67
2.11 The Heisenberg Uncertainty Principle	68
2.12 The Schrödinger Equation	70
2.13 The Hydrogen Atom	74
2.13.1 The Radial Wave Functions	76
2.13.2 The Angular Wave Functions	79
2.14 The Spin Quantum Number	83
2.15 The Topological Atom	85
2.15.1 In-Depth: Atomic Units	87
Exercises	88
Bibliography	90

Chapter 3	 The Periodicity of the Elements	91
3.1	Introduction	91
3.2	Hydrogenic Orbitals in Polyelectronic Atoms	92
3.2.1	In-Depth: The Helium Atom	94
3.3	The Quantum Structure of the Periodic Table	95
3.4	Electron Configurations	98
3.5	Shielding and Effective Nuclear Charges	102
3.6	Ionization Energy	104
3.7	Electron Affinity	109
3.8	Theoretical Radii	111
3.8.1	In-Depth: How the Radius Affects Other Properties	114
3.9	Polarizability	116
3.10	The Metal–Nonmetal Staircase	118
3.11	Global Hardness	120
3.12	Electronegativity	121
3.13	The Uniqueness Principle	124
3.14	Diagonal Properties	125
3.15	Relativistic Effects	126
3.16	The Inert-Pair Effect	128
	Exercises	129
	Bibliography	131
Chapter 4	 An Introduction to Chemical Bonding	133
4.1	The Definition of a Chemical Bond	133
4.2	The Thermodynamic Driving Force for Bond Formation	134
4.3	Lewis Structures and Formal Charges	138
4.3.1	Rules for Drawing Lewis Structures	140
4.4	Covalent Bond Lengths and Bond Dissociation Energies	143
4.5	Resonance	144
4.6	Electronegativity and Polar Covalent Bonding	147
4.7	Types of Chemical Bonds—The Triangle of Bonding	148
4.8	Atoms in Molecules	153
	Exercises	159
	Bibliography	160
Chapter 5	 Molecular Geometry	163
5.1	X-Ray Crystallography and the Determination of Molecular Geometry	163
5.2	Linnett's Double Quartet Theory	165
5.3	Valence-Shell Electron Pair Repulsion Theory	170
5.3.1	Rules for Determining the Geometry of a Molecule Using VSEPR Theory	171
5.4	The Ligand Close-Packing Model	183
5.5	A Comparison of the VSEPR and LCP Models	187
	Exercises	188
	Bibliography	190
Chapter 6	 Symmetry and Spectroscopy	191
6.1	Symmetry Elements and Symmetry Operations	191
6.1.1	Identity, E	193
6.1.2	Proper Rotation, C_n	193
6.1.3	Reflection, σ	195
6.1.4	Inversion, i	196
6.1.5	Improper Rotation, S_n	196
6.2	Symmetry Groups	199

6.3	Molecular Point Groups	203
6.3.1	In-Depth: Dipole Moments	208
6.4	Representations of Symmetry Operations	210
6.5	Character Tables	217
6.5.1	Irreducible Representations and Characters	217
6.5.2	Degenerate Representations	218
6.5.3	Rules Regarding Irreducible Representations	219
6.5.4	Conjugate Matrices and Classes	220
6.5.5	Mulliken Symbols	222
6.6	Direct Products	224
6.7	Reducible Representations and the Great Orthogonality Theorem	229
6.8	Molecular Spectroscopy and the Selection Rules	234
6.8.1	Infrared Spectroscopy	236
6.8.2	Raman Spectroscopy	240
6.8.3	A Summary of the Selection Rules for Vibrational Spectroscopy	241
6.8.4	In-Depth: Resonance Raman Spectroscopy	241
6.9	Determining the Symmetries of the Normal Modes of Vibration	243
6.10	Determining a Molecule's Likely Geometry from Its Spectroscopy	249
6.11	Generating Symmetry Coordinates Using the Projection Operator Method	252
	Exercises	263
	Bibliography	269

Chapter 7	Structure and Bonding in Molecules	271
7.1	Molecules as Unique Entities	271
7.2	Valence Bond Theory	272
7.2.1	Diatomic Molecules	272
7.2.2	In-Depth: A Mathematical Treatment of VBT	273
7.2.3	Polyatomic Atoms and Hybridization	275
7.2.4	Variable Hybridization	281
7.2.5	Bent's Rule	283
7.2.6	Hypervalent Molecules	286
7.2.7	<i>Sigma</i> and <i>pi</i> Bonding	288
7.2.8	Transition Metal Compounds	289
7.2.9	Limitations of Valence Bond Theory	293
7.3	Molecular Orbital Theory	293
7.3.1	Homonuclear Diatomics	293
7.3.2	In-Depth: A Mathematical Treatment of MOT	294
7.3.3	Mixing	302
7.3.4	Heteronuclear Diatomics	307
7.3.5	The Covalent to Ionic Transition in MOT	310
7.3.6	Polyatomic Molecules: H_3^- and H_3^+	312
7.3.7	Correlation Diagrams and the Prediction of Molecular Geometry	316
7.3.8	A Brief Introduction to the Jahn–Teller Effect	318
7.3.9	AH_n Molecules and Walsh Diagrams	320
7.3.10	In-Depth: Pearson's Symmetry Rules for Predicting the Structures of AH_n Molecules	332
7.3.11	Polyatomic Molecules Having <i>pi</i> Orbitals	334
7.3.12	In-Depth: Pearson's Symmetry Rules for Predicting the Structures of AX_n Molecules	340
7.3.13	<i>pi</i> Molecular Orbitals and Hückel Theory	342
7.3.14	Combining VB Concepts into MO Diagrams	346
7.3.15	Hypercoordinated Molecules	349
7.3.16	MO Diagrams for Transition Metal Compounds	352

- 7.3.17 Metal–Metal Bonding 356
- 7.3.18 Three-Centered, Two-Electron Bonding in Diborane 358

7.4 The Complementarity of VBT and MOT 363

Exercises 365

Bibliography 367

Chapter 8 | Structure and Bonding in Solids

369

8.1 Crystal Structures 369

- 8.1.1 The 14 Bravais Lattices 373
- 8.1.2 Closest-Packed Structures 377
- 8.1.3 The 32 Crystallographic Point Groups and 230 Space Groups 381
- 8.1.4 The Determination of Crystal Structures 386
- 8.1.5 The Bragg Diffraction Law 386
- 8.1.6 Miller Planes and Indexing Powder Patterns 387
- 8.1.7 In-Depth: Quasicrystals 392

8.2 Metallic Bonding 393

- 8.2.1 The Free Electron Model of Metallic Bonding 395
- 8.2.2 Band Theory of Solids 399
- 8.2.3 Conductivity in Solids 407
- 8.2.4 In-Depth: the p–n Junction and n–p–n Bipolar Junction Transistor 418

8.3 Ionic Bonding 421

- 8.3.1 In-Depth: High-Temperature Superconductors 429
- 8.3.2 Lattice Enthalpies and the Born–Haber Cycle 430
- 8.3.3 Ionic Radii and Pauling’s Rules 436
- 8.3.4 In-Depth: the Silicates 449
- 8.3.5 Defects in Crystals 450

8.4 Types of Crystalline Solids 453

- 8.4.1 Intermediate Types of Bonding in Solids 457

Exercises 465

Bibliography 475

Chapter 9 | Chemical Structure and Reactivity

477

9.1 Acid–Base Chemistry 478

- 9.1.1 Definitions of Acids and Bases 478
- 9.1.2 Measuring the Strengths of Acids and Bases 485
- 9.1.3 Factors Affecting the Strengths of Acids and Bases 489
- 9.1.4 Pearson’s Hard–Soft Acid–Base Theory 495
- 9.1.5 The Relationship Between HSAB Theory and FMO Theory 497

9.2 Redox Chemistry 499

- 9.2.1 The Relationship Between Acid–Base and Redox Chemistry 499
- 9.2.2 Rationalizing Trends in Standard Reduction Potentials 500
- 9.2.3 Quantum Structure Property Relationships 505
- 9.2.4 The Drago–Wayland Parameters 507

9.3 A Generalized View of Chemical Reactivity 509

Exercises 515

Bibliography 519

Chapter 10 | Coordination Chemistry

521

10.1 An Overview of Coordination Chemistry 522

- 10.1.1 The Historical Development of Coordination Chemistry 523
- 10.1.2 Types of Ligands and Proper Nomenclature 525
- 10.1.3 Stability Constants 527
- 10.1.4 Isomers 531
- 10.1.5 Common Coordination Geometries 534

10.1.6	In-Depth: Five-Coordinate Compounds	537
10.1.7	The Shapes of the <i>d</i> -Orbitals	540
10.2	Models of Bonding in Coordination Compounds	541
10.2.1	Crystal Field Theory	541
10.2.2	Ligand Field Theory	555
10.2.3	Quantitative Measures of LF Strength	562
10.3	Electronic Spectroscopy of Coordination Compounds	572
10.3.1	Term Symbols	572
10.3.2	Tanabe–Sugano Diagrams	578
10.3.3	Electronic Absorptions and the Selection Rules	584
10.3.4	Using Tanabe–Sugano Diagrams to Interpret or Predict Electronic Spectra	587
10.3.5	The Effect of Reduced Symmetry on Electronic Transitions	593
10.3.6	The Jahn–Teller Effect	594
10.3.7	Charge Transfer Transitions	596
10.3.8	Magnetic Properties of Coordination Compounds	598
10.3.9	Diamagnetism	601
10.3.10	Paramagnetism	602
10.3.11	Antiferromagnetism	602
10.3.12	Ferromagnetism	603
10.3.13	Ferrimagnetism	604
	Exercises	605
	Bibliography	610

Chapter 11	Reactions of Coordination Compounds	613
11.1	An Introduction to Kinetics and Reaction Coordinate Diagrams	613
11.1.1	Zero-Order Reactions	614
11.1.2	First-Order Reactions (Irreversible)	615
11.1.3	First-Order Reactions (Reversible and Coming to Equilibrium)	616
11.1.4	Simple Second-Order Reactions (Irreversible)	617
11.1.5	Complex Second-Order Reactions (Reversible and Coming to Equilibrium)	617
11.1.6	Complex Second-Order Reactions (Irreversible)	618
11.1.7	Pseudo First-Order Reactions	618
11.1.8	Consecutive First-Order Reactions and the Steady-State Approximation	619
11.1.9	Competing Mechanisms	619
11.1.10	Summary of the Common Rate Laws	620
11.1.11	The Arrhenius Equation	620
11.1.12	Activation Parameters	621
11.2	Octahedral Substitution Reactions	623
11.2.1	Associative (A) Mechanisms	624
11.2.2	Interchange (I) Mechanisms	624
11.2.3	Dissociative (D) Mechanisms	625
11.2.4	Acid and Base Catalysis	628
11.2.5	Ligand Field Activation Energies	629
11.3	Square Planar Substitution Reactions	631
11.3.1	The Trans Effect	635
11.3.2	The Effects of the Leaving Group and the Nucleophile	637
11.3.3	MOT and Square Planar Substitution	638
11.4	Electron Transfer Reactions	640
11.4.1	Outer-Sphere Electron Transfer	641
11.4.2	The Franck–Condon Principle	641
11.4.3	Marcus Theory	645
11.4.4	Inner-Sphere Electron Transfer	648
11.4.5	Mixed-Valence Compounds	652
	Exercises	655
	Bibliography	657

Chapter 12	 Organometallic Chemistry	659
12.1	Introduction to Organometallic Chemistry	659
12.2	Electron Counting and the 18-Electron Rule	660
12.3	Carbonyl Ligands	663
12.4	Nitrosyl Ligands	668
12.5	Hydride and Dihydrogen Ligands	670
12.6	Phosphine Ligands	672
12.7	Ethylene and Related Ligands	674
12.8	Cyclopentadiene and Related Ligands	678
12.9	Carbenes, Carbynes, and Carbidos	682
	Exercises	684
	Bibliography	687
Chapter 13	 Reactions of Organometallic Compounds	689
13.1	Some General Principles	689
13.2	Organometallic Reactions Involving Changes at the Metal	690
13.2.1	Ligand Substitution Reactions	690
13.2.2	Oxidative Addition and Reductive Elimination	692
13.3	Organometallic Reactions Involving Changes at the Ligand	705
13.3.1	Insertion and Elimination Reactions	705
13.3.2	Nucleophilic Attack on the Ligands	709
13.3.3	Electrophilic Attack on the Ligands	710
13.4	Metathesis Reactions	711
13.4.1	π -Bond Metathesis	711
13.4.2	Ziegler–Natta Polymerization of Alkenes	712
13.4.3	σ -Bond Metathesis	713
13.5	A Summary of Organometallic Reaction Mechanisms	714
13.6	Organometallic Catalytic Cycles	714
13.6.1	Catalytic Hydrogenation	716
13.6.2	Hydroformylation	717
13.6.3	The Wacker–Smidt Process	719
13.6.4	The Monsanto Acetic Acid Process	720
13.6.5	Palladium-Catalyzed Cross-Coupling Mechanisms	721
13.7	The Isolobal Analogy and the Relationship to Main Group Chemistry	725
13.8	Closing Remarks	728
	Exercises	729
	Bibliography	732
Appendix: A	Derivation of the Classical Wave Equation	733
	Bibliography	734
Appendix: B	Derivation of the Schrödinger Equation	735
Appendix: C	Postulates of Quantum Mechanics	739
	Bibliography	741
Appendix: D	Atomic Term Symbols and Spin–Orbit Coupling	743
	Extracting Term Symbols Using Russell–Saunders Coupling	744
	Extracting Term Symbols Using jj Coupling	747
	Correlation Between RS (LS) Coupling and jj Coupling	749
Appendix: E	Character Tables	751
	Bibliography	763

Appendix: F	Direct Product Tables Bibliography	765 769
Appendix: G	Reducing Representations by the Process of Diagonalization	771
Appendix: H	Correlation Tables Bibliography	775 781
Appendix: I	The Harmonic Oscillator Model Bibliography	783 786
Appendix: J	Molecular Term Symbols Bibliography	787 789
Appendix: K	The 230 Space Groups Bibliography	791 795
