

Daniel Blankschtein

Lectures in Classical Thermodynamics with an Introduction to Statistical Mechanics

Contents

Lecture 1	Introduction to the Book	1
1.1	Motivation and Scope of the Book	1
1.2	Organization of the Book	2
1.3	Acknowledgments	2
 Part I Fundamental Principles and Properties of Pure Fluids		
Lecture 2	Useful Definitions, Postulates, Nomenclature, and Sample Problems	7
2.1	Introduction	7
2.2	Useful Definitions	7
2.3	Postulates I and II (Adapted from Appendix A in T&M)	9
2.4	Sample Problem 2.1	9
2.4.1	Solution	10
2.5	Sample Problem 2.2	10
2.5.1	Solution	10
2.6	Nomenclature	11
Lecture 3	The First Law of Thermodynamics for Closed Systems: Derivation and Sample Problems	13
3.1	Introduction	13
3.2	Work Interactions	13
3.3	Sample Problem 3.1	14
3.3.1	Solution	14
3.4	Specific Types of Work Interactions	15
3.5	Sample Problem 3.2	16
3.5.1	Solution	16
3.6	Sample Problem 3.3	16
3.6.1	Solution	17
3.7	Postulate III (Adapted from Appendix A in T&M)	20
		vii

3.8	Energy Decomposition	20
3.9	Heat Interactions	20
3.10	The First Law of Thermodynamics for Closed Systems	21
Lecture 4	The First Law of Thermodynamics for Closed Systems: Thermal Equilibrium, the Ideal Gas, and Sample Problem	23
4.1	Introduction	23
4.2	Thermal Equilibrium and the Directionality of Heat Interactions	23
4.3	Postulate IV (Adapted from Appendix A in T&M) . . .	24
4.4	Ideal Gas Properties	25
	4.4.1 Equation of State (EOS)	25
	4.4.2 Internal Energy	25
	4.4.3 Enthalpy	25
	4.4.4 Other Useful Relationships	26
4.5	Sample Problem 4.1: Problem 3.1 in T&M	26
	4.5.1 Solution	27
Lecture 5	The First Law of Thermodynamics for Closed Systems: Sample Problem 4.1, Continued	31
5.1	Introduction	31
5.2	Sample Problem 4.1: Problem 3.1 in T&M, Continued	31
5.3	Solution 1: System III-Atmosphere (a)	32
5.4	Solution 2: System I-Gas (g)	35
5.5	Food for Thought	40
Lecture 6	The First Law of Thermodynamics for Open Systems: Derivation and Sample Problem	41
6.1	Introduction	41
6.2	The First Law of Thermodynamics for Open Systems	41
	6.2.1 Notation	41
	6.2.2 Derivation	42
6.3	Sample Problem 6.1: Problem 3.9 in T&M	43
	6.3.1 Solution Strategy	44
	6.3.2 Well-Mixed Gas Model System	45
	6.3.3 Pressurization Step: Well-Mixed Gas Model System	46
	6.3.4 Layered or Stratified Gas Model System . . .	48

	6.3.5	Pressurization Step: Stratified Gas Model System	48
	6.3.6	Emptying Step: Well-Mixed Gas Model System	48
Lecture 7		The Second Law of Thermodynamics: Fundamental Concepts and Sample Problem	53
	7.1	Introduction	53
	7.2	Natural Processes	53
	7.3	Statement (1) of the Second Law of Thermodynamics	56
	7.4	Sample Problem 7.1	56
	7.4.1	Solution	57
	7.5	Statement (1a) of the Second Law of Thermodynamics	57
	7.6	Heat Engine	58
	7.7	Efficiency of a Heat Engine	59
	7.8	Reversible Process	60
Lecture 8		Heat Engine, Carnot Efficiency, and Sample Problem	63
	8.1	Introduction	63
	8.2	Heat Engine	63
	8.3	Theorem of Carnot	65
	8.4	Corollary to Theorem of Carnot	65
	8.5	Sample Problem 8.1	66
	8.5.1	Solution	67
	8.6	Theorem of Clausius	70
Lecture 9		Entropy and Reversibility	71
	9.1	Introduction	71
	9.2	Entropy	71
	9.3	Reversible Process	77
	9.4	Irreversible Process	77
Lecture 10		The Second Law of Thermodynamics, Maximum Work, and Sample Problems	81
	10.1	Introduction	81
	10.2	A More General Statement of the Second Law of Thermodynamics	81
	10.3	Heat Interactions Along Reversible and Irreversible Paths (Closed System)	82
	10.4	Work Interactions Along Reversible and Irreversible Paths (Closed System)	84
	10.5	Sample Problem 10.1	85
	10.5.1	Solution	86
	10.6	Sample Problem 10.2	87
	10.6.1	Solution	87

10.7	Criterion of Equilibrium Based on the Entropy	88
10.8	Sample Problem 10.3	89
10.8.1	Solution	89
Lecture 11	The Combined First and Second Law of Thermodynamics, Availability, and Sample Problems	93
11.1	Introduction	93
11.2	Closed, Single-Phase, Simple System	93
11.3	Open, Single-Phase, Simple System	94
11.4	Sample Problem 11.1	96
11.4.1	Solution	96
11.5	Sample Problem 11.2	99
11.5.1	Solution	100
Lecture 12	Flow Work and Sample Problems	103
12.1	Introduction	103
12.2	Sample Problem 12.1	103
12.2.1	Solution	103
12.3	Sample Problem 12.2: Problem 4.3 in T&M	106
12.3.1	Solution: Assumptions	107
Lecture 13	Fundamental Equations and Sample Problems	117
13.1	Introduction	117
13.2	Thermodynamic Relations for Simple Systems	117
13.3	Fundamental Equation	119
13.4	The Theorem of Euler in the Context of Thermodynamics (Adapted from Appendix C in T&M)	121
13.5	Sample Problem 13.1	122
13.5.1	Solution	122
13.6	Sample Problem 13.2	123
13.6.1	Solution	123
13.7	Variable Transformations and New Fundamental Equations	124
13.8	Sample Problem 13.3	126
13.8.1	Solution	126
13.9	Sample Problem 13.4	127
13.9.1	Solution	127
Lecture 14	Manipulation of Partial Derivatives and Sample Problems	129
14.1	Introduction	129
14.2	Two Additional Restrictions on the Internal Energy Fundamental Equation	129
14.3	Corollary to Postulate I	130

14.4	Reconstruction of the Internal Energy Fundamental Equation	130
14.5	Manipulation of Partial Derivatives of Thermodynamic Functions	131
14.6	Internal Energy and Entropy Fundamental Equations	132
14.7	Useful Rules to Calculate Partial Derivatives of Thermodynamic Functions	132
14.7.1	The Triple Product Rule	132
14.7.2	The Add Another Variable Rule	133
14.7.3	The Derivative Inversion Rule	133
14.7.4	Maxwell's Reciprocity Rule	133
14.8	Sample Problem 14.1	134
14.8.1	Solution	134
14.9	Jacobian Transformations	134
14.9.1	Properties of Jacobians	135
14.10	Sample Problem 14.2	136
14.10.1	Solution	136
Lecture 15	Properties of Pure Materials and Gibbs Free Energy	
	Formulation	137
15.1	Introduction	137
15.2	Gibbs Free Energy Fundamental Equation	137
15.3	Derivation of the Gibbs-Duhem Equation	138
15.4	Relating the Gibbs Free Energy to Other Thermodynamic Functions	139
15.5	First-Order and Second-Order Partial Derivatives of the Gibbs Free Energy	139
15.6	Determining Which Data Set Has the Same Thermodynamic Information Content as the Gibbs Free Energy Fundamental Equation	142
Lecture 16	Evaluation of Thermodynamic Data of Pure Materials and Sample Problems	147
16.1	Introduction	147
16.2	Summary of Changes in Entropy, Internal Energy, and Enthalpy	147
16.2.1	Using T and P as the Two Independent Intensive Variables	148
16.2.2	Using T and V as the Two Independent Intensive Variables	148
16.2.3	The Ideal Gas Limit	148
16.2.4	Relation between C_P and C_V	149
16.3	Sample Problem 16.1	149
16.3.1	Solution	149

16.4	Sample Problem 16.2	150
16.4.1	Solution	151
16.5	Evaluation of Changes in the Thermodynamic Properties of Pure Materials	151
16.5.1	Calculation of the Entropy Change	151
16.5.2	Strategy I	152
16.5.3	Strategy II	152
16.5.4	Strategy III	152
Lecture 17	Equations of State of a Pure Material, Binodal, Spinodal, Critical Point, and Sample Problem	159
17.1	Introduction	159
17.2	Equations of State of a Pure Material	159
17.3	Examples of Equations of State (EOS)	160
17.3.1	The Ideal Gas EOS	160
17.3.2	The van der Waals EOS	160
17.4	Sample Problem 17.1	161
17.4.1	Solution	161
17.5	Pressure-Explicit Form of the Isotherm $P = f(V, T)$ of a Pure Material	162
17.6	Stable, Metastable, and Unstable Equilibrium	166
17.7	Mechanical Analogy of Stable, Metastable, and Unstable Equilibrium States	167
17.8	Mathematical Conditions for Stability, Metastability, and Instability	168
17.9	Mathematical Conditions for the Spinodal and the Critical Point	168
Lecture 18	The Principle of Corresponding States and Sample Problems	171
18.1	Introduction	171
18.2	Examples of Additional Equations of State (EOS)	171
18.2.1	The Redlich-Kwong (RK) EOS	171
18.2.2	Sample Problem 18.1	172
18.2.2.1	Solution	172
18.2.3	Sample Problem 18.2	173
18.2.3.1	Solution	173
18.2.4	The Peng-Robinson (PR) EOS	174
18.2.5	The Virial EOS	174
18.2.6	Sample Problem 18.3	175
18.2.6.1	Solution	175
18.3	The Principle of Corresponding States	177
18.3.1	The Compressibility Factor	177
18.3.2	Sample Problem 18.4	180
18.3.2.1	Solution	180

Lecture 19	Departure Functions and Sample Problems	187
19.1	Introduction	187
19.2	Sample Problem 19.1	187
19.2.1	Solution	187
19.3	Departure Functions	191
19.4	Calculation of the Entropy Departure Function, DS (T, P)	192
19.5	Calculation of the Helmholtz Free Energy Departure Function, DA(T, V)	193
19.6	Calculation of the Entropy Departure Function, DS (T, V)	194
19.7	Sample Problem 19.2	196
19.7.1	Solution	196
19.8	Important Remark	197
Lecture 20	Review of Part I and Sample Problem	199
20.1	Introduction	199
20.2	Basic Concepts, Definitions, and Postulates	199
20.3	Ideal Gas	199
20.4	The First Law of Thermodynamics for Closed Systems	200
20.5	The First Law of Thermodynamics for Open, Simple Systems	200
20.6	The First Law of Thermodynamics for Steady-State Flow Systems	200
20.7	Carnot Engine	201
20.8	Entropy of a Closed System	201
20.9	The Second Law of Thermodynamics	201
20.10	The Combined First and Second Law of Thermodynamics for Closed Systems	201
20.11	Entropy Balance for Open Systems	202
20.12	Maximum Work, Availability	202
20.13	Fundamental Equations	202
20.14	Manipulation of Partial Derivatives	203
20.15	Manipulation of Partial Derivatives Using Jacobian Transformations	204
20.16	Maxwell's Reciprocity Rules	204
20.17	Important Thermodynamic Relations for Pure Materials	205
20.18	Gibbs-Duhem Equation for a Pure Material	206
20.19	Equations of State (EOS)	206
20.20	Stability Criteria for a Pure Material	207
20.21	Sample Problem 20.1	208
20.21.1	Solution	208

Part II Mixtures: Models and Applications to Phase and Chemical Reaction Equilibria

Lecture 21	Extensive and Intensive Mixture Properties and Partial Molar Properties	213
21.1	Introduction	213
21.2	Extensive and Intensive Differentials of Mixtures . . .	214
21.3	Choose Set 1: $\{T, P, N_1, \dots, N_n\}$ and Analyze $\underline{B} = \underline{B}(T, P, N_1, \dots, N_n)$	215
21.4	Important Remarks	216
21.5	Choose Set 2: $\{T, P, x_1, \dots, x_{n-1}, N\}$ and Analyze $\underline{B} = \underline{B}(T, P, x_1, \dots, x_{n-1}, N)$	216
21.6	Choose Set 1: $\{T, P, N_1, \dots, N_n\}$ and Analyze $B = B(T, P, N_1, \dots, N_n)$	218
21.7	Choose Set 2: $\{T, P, x_1, \dots, x_{n-1}, N\}$ and Analyze $B = B(T, P, x_1, \dots, x_{n-1}, N)$	219
Lecture 22	Generalized Gibbs-Duhem Relations for Mixtures, Calculation of Partial Molar Properties, and Sample Problem	223
22.1	Introduction	223
22.2	Partial Molar Properties	223
22.3	Useful Relations Between Partial Molar Properties	224
22.4	How Do We Calculate $\bar{B}_i$? Cases 1, 2, and 3	225
22.5	Sample Problem 22.1	228
	22.5.1 Solution	228
22.6	Generalized Gibbs-Duhem Relations for Mixtures . .	230
Lecture 23	Mixture Equations of State, Mixture Departure Functions, Ideal Gas Mixtures, Ideal Solutions, and Sample Problem	233
23.1	Introduction	233
23.2	Sample Problem 23.1	233
	23.2.1 Solution	234
23.3	Equations of State for Gas Mixtures	235
	23.3.1 Ideal Gas (IG) Mixture EOS	235
	23.3.2 van der Waals (vdW) Mixture EOS	235
	23.3.3 Peng-Robinson (PR) Mixture EOS	236
	23.3.4 Virial Mixture EOS	237
23.4	Calculation of Changes in the Thermodynamic Properties of Gas Mixtures	238
	23.4.1 Mixture Attenuated State Approach	239
	23.4.2 Mixture Departure Function Approach . . .	240

23.5	Ideal Gas Mixtures and Ideal Solutions	241
23.5.1	One Component (Pure, $n = 1$) Ideal Gas	241
23.5.2	Ideal Gas Mixture: For Component i	242
23.5.3	Ideal Solution: For Component i	242
Lecture 24	Mixing Functions, Excess Functions, and Sample Problems	243
24.1	Introduction	243
24.2	Sample Problem 24.1	243
24.2.1	Solution	244
24.3	Sample Problem 24.2	245
24.3.1	Solution	246
24.4	Sample Problem 24.3	247
24.4.1	Solution	248
24.5	Other Useful Relations for an Ideal Solution	248
24.6	Summary of Results for an Ideal Solution	249
24.7	Mixing Functions	249
24.7.1	The Mixing B and Reference States	250
24.7.2	Pure Component Reference State for Component j	251
24.7.3	Useful Relations for Mixing Functions	251
24.8	Mixing Functions: Mixing of Three Liquids at Constant T and P	252
24.9	Ideal Solution Mixing Functions	254
24.10	Excess Functions	255
Lecture 25	Ideal Solution, Regular Solution, and Athermal Solution Behaviors, and Fugacity and Fugacity Coefficient	259
25.1	Introduction	259
25.2	Ideal Solution Behavior	259
25.3	Regular Solution Behavior	260
25.4	Athermal Solution Behavior	261
25.5	Fugacity and Fugacity Coefficient	261
25.5.1	Variations of $\hat{f}_i$ and f_i with Pressure	263
25.5.2	Variations of $\hat{f}_i$ and f_i with Temperature	263
25.6	Other Relations Involving Fugacities	265
25.7	Calculation of Fugacity	265
25.8	The Lewis and Randall Rule	268
Lecture 26	Activity, Activity Coefficient, and Sample Problems	271
26.1	Introduction	271
26.2	Activity and Activity Coefficient	272
26.3	Pure Component Reference State	273
26.4	Calculation of Activity	275

26.5	Sample Problem 26.1	276
26.5.1	Solution	277
26.6	Sample Problem 26.2	279
26.6.1	Solution	279
Lecture 27	Criteria of Phase Equilibria, and the Gibbs Phase Rule . .	281
27.1	Introduction	281
27.2	Use of Other Reference States	281
27.3	Phase Equilibria: Introduction	282
27.4	Criteria of Phase Equilibria	283
27.4.1	Thermal Equilibrium	284
27.4.2	Mechanical Equilibrium	285
27.4.3	Diffusional Equilibrium	285
27.5	The Gibbs Phase Rule	286
Lecture 28	Application of the Gibbs Phase Rule, Azeotrope, and Sample Problem	291
28.1	Introduction	291
28.2	The Gibbs Phase Rule for a Pure Substance	291
28.3	Sample Problem 28.1	293
28.3.1	Solution	293
Lecture 29	Differential Approach to Phase Equilibria, Pressure-Temperature-Composition Relations, Clausius-Clapeyron Equation, and Sample Problem	295
29.1	Introduction	295
29.2	Sample Problem 29.1	295
29.2.1	Solution	296
29.3	Simplifications of Eqs. (29.21) and (29.22)	300
Lecture 30	Pure Liquid in Equilibrium with Its Pure Vapor, Integral Approach to Phase Equilibria, Composition Models, and Sample Problems	305
30.1	Introduction	305
30.2	From Lecture 29	306
30.3	Pure Liquid in Equilibrium with Its Pure Vapor	306
30.4	Integral Approach to Phase Equilibria	310
30.4.1	Sample Problem 30.1	310
30.4.2	Solution Strategy	310
30.4.3	Calculation of Vapor Mixture Fugacities . .	311
30.4.4	Calculation of Liquid Mixture Fugacities . .	312
30.4.5	Calculation of Pure Component i Liquid Fugacity	313
30.4.6	Simplifications of Eq. (30.29)	315
30.4.7	Models for the Excess Gibbs Free Energy of Mixing of $n = 2$ Mixtures	316

	30.4.8	Models for the Excess Gibbs Free Energy of Mixing of $n > 2$ Mixtures	318
Lecture 31		Chemical Reaction Equilibria: Stoichiometric Formulation and Sample Problem	321
	31.1	Introduction	321
	31.2	Contrasting the Calculation of Changes in Thermodynamic Properties With and Without Chemical Reactions	321
	31.2.1	Case I: Closed Binary System of Inert Components 1 and 2	322
	31.2.2	Case II: Closed Binary System of Components 1 and 2 Undergoing a Dissociation Reaction	322
	31.3	Stoichiometric Formulation	323
	31.4	Important Remark	326
	31.5	Sample Problem 31.1	326
	31.5.1	Solution	327
Lecture 32		Criterion of Chemical Reaction Equilibria, Standard States, and Equilibrium Constants for Gas-Phase Chemical Reactions	329
	32.1	Introduction	329
	32.2	Derivation of the Criterion of Chemical Reaction Equilibria	330
	32.3	Derivation of the Equilibrium Constant for Chemical Reaction r	331
	32.4	Derivation of the Equilibrium Constant for a Single Chemical Reaction	334
	32.5	Discussion of Standard States for Gas-Phase, Liquid-Phase, and Solid-Phase Chemical Reactions	334
	32.6	Comments on the Standard-State Pressure	336
	32.7	Decomposition of the Equilibrium Constant into Contributions from the Fugacity Coefficients, the Gas Mixture Mole Fractions, and the Pressure	337
Lecture 33		Equilibrium Constants for Condensed-Phase Chemical Reactions, Response of Chemical Reactions to Temperature, and Le Chatelier's Principle	341
	33.1	Introduction	341
	33.2	Derivation of the Equilibrium Constant for a Condensed-Phase Chemical Reaction	341
	33.3	Determination of the Standard Molar Gibbs Free Energy of Reaction	343
	33.4	Response of Chemical Reactions to Changes in Temperature and Pressure	348

	33.5	How Does a Chemical Reaction Respond to Temperature?	348
	33.6	Le Chatelier's Principle	350
Lecture 34		Response of Chemical Reactions to Pressure, and Sample Problems	353
	34.1	Introduction	353
	34.2	How Does a Chemical Reaction Respond to Pressure?	353
	34.3	Sample Problem 34.1	355
		34.3.1 Solution	355
	34.4	Sample Problem 34.2	358
		34.4.1 Solution	358
Lecture 35		The Gibbs Phase Rule for Chemically-Reacting Systems and Sample Problem	367
	35.1	Introduction	367
	35.2	Sample Problem 35.1	367
		35.2.1 Solution Strategy	368
		35.2.2 Selection of Standard States	369
		35.2.3 Remarks	370
		35.2.4 Evaluation of Fugacities	370
		35.2.5 Calculation of the Equilibrium Constant	370
		35.2.6 Comment on the Standard-State Pressure	373
Lecture 36		Effect of Chemical Reaction Equilibria on Changes in Thermodynamic Properties and Sample Problem	375
	36.1	Introduction	375
	36.2	Sample Problem 36.1: Production of Sulfuric Acid by the Contact Process	375
	36.3	Solution Strategy	376
	36.4	Evaluation of $K(T)$	379
	36.5	Derivation of the Second Equation Relating T and ξ	382
Lecture 37		Review of Part II and Sample Problem	389
	37.1	Introduction	389
	37.2	Partial Molar Properties	389
	37.3	Generalized Gibbs-Duhem Relations for Mixtures	390
	37.4	Gibbs-Helmholtz Relation	390
	37.5	Mixing Functions	390
	37.6	Ideal Gas Mixtures	391
	37.7	Ideal Solutions	391

37.8	Excess Functions	392
37.9	Fugacity	393
37.10	Variation of Fugacity with Temperature and Pressure	394
37.11	Generalized Gibbs-Duhem Relation for Fugacities	394
37.12	Fugacity Coefficient	394
37.13	Lewis and Randall Rule	395
37.14	Activity	395
37.15	Activity Coefficient	396
37.16	Variation of Activity Coefficient with Temperature and Pressure	396
37.17	Generalized Gibbs-Duhem Relation for Activity Coefficients	396
37.18	Conditions for Thermodynamic Phase Equilibria . . .	396
37.19	Gibbs Phase Rule	397
37.20	Differential Approach to Phase Equilibria	397
37.21	Dependence of Fugacities on Temperature, Pressure, and Mixture Composition	397
37.22	Integral Approach to Phase Equilibria	398
37.23	Pressure-Temperature Relations	398
37.24	Stoichiometric Formulation for Chemical Reactions	399
37.25	Equilibrium Constant	399
37.26	Typical Reference States for Gas, Liquid, and Solid	399
37.27	Equilibrium Constant for Gases Undergoing a Single Chemical Reaction	399
37.28	Equilibrium Constants for Liquids and Solids	400
37.29	Calculation of the Standard Molar Gibbs Free Energy of Reaction	400
37.30	Variation of the Equilibrium Constant with Temperature and Pressure	401
37.31	Sample Problem 37.1	401
	37.31.1 Solution	402

Part III Introduction to Statistical Mechanics

Lecture 38	Statistical Mechanics, Canonical Ensemble, Probability and the Boltzmann Factor, and Canonical Partition Function	411
38.1	Introduction	411
38.2	Canonical Ensemble and the Boltzmann Factor	412

38.3	Probability That a System in the Canonical Ensemble Is in Quantum State j with Energy $E_j(N, V)$	415
38.4	Physical Interpretation of the Canonical Partition Function	416
Lecture 39	Calculation of Average Thermodynamic Properties Using the Canonical Partition Function and Treatment of Distinguishable and Indistinguishable Molecules	419
39.1	Introduction	419
39.2	Calculation of the Average Energy of a Macroscopic System	419
39.3	Calculation of the Average Heat Capacity at Constant Volume of a Macroscopic System	421
39.4	Calculation of the Average Pressure of a Macroscopic System	421
39.5	Canonical Partition Function of a System of Independent and Distinguishable Molecules	422
39.6	Canonical Partition Function of a System of Independent and Indistinguishable Molecules	424
39.7	Decomposition of a Molecular Canonical Partition Function into Canonical Partition Functions for Each Degree of Freedom	425
39.8	Energy States and Energy Levels	427
Lecture 40	Translational, Vibrational, Rotational, and Electronic Contributions to the Partition Function of Monoatomic and Diatomic Ideal Gases and Sample Problem	429
40.1	Introduction	429
40.2	Partition Functions of Ideal Gases	429
40.3	Translational Partition Function of a Monoatomic Ideal Gas	430
40.4	Electronic Contribution to the Atomic Partition Function	432
40.5	Sample Problem 40.1	433
	40.5.1 Solution	433
40.6	Average Energy of a Monoatomic Ideal Gas	434
40.7	Average Heat Capacity at Constant Volume of a Monoatomic Ideal Gas	435
40.8	Average Pressure of a Monoatomic Ideal Gas	435
40.9	Diatomic Ideal Gas	435
Lecture 41	Thermodynamic Properties of Ideal Gases of Diatomic Molecules Calculated Using Partition Functions and Sample Problems	439
41.1	Introduction	439
41.2	Vibrational Partition Function of a Diatomic Molecule	440

41.3	Sample Problem 41.1	442
41.3.1	Solution	442
41.4	Rotational Partition Function of a Diatomic Molecule	443
41.5	Average Rotational Energy of an Ideal Gas of Diatomic Molecules	444
41.6	Average Rotational Heat Capacity at Constant Volume of an Ideal Gas of Diatomic Molecules	445
41.7	Fraction of Diatomic Molecules in the Jth Rotational Level	445
41.8	Rotational Partition Functions of Diatomic Molecules Contain a Symmetry Number	446
41.9	Total Partition Function of a Diatomic Molecule	447
41.10	Sample Problem 41.2	447
41.10.1	Solution	447

Lecture 42	Statistical Mechanical Interpretation of Reversible Mechanical Work, Reversible Heat, and the First Law of Thermodynamics, the Micro-Canonical Ensemble and Entropy, and Sample Problem	449
42.1	Introduction	449
42.2	Statistical Mechanical Interpretation of Reversible Mechanical Work, Reversible Heat, and the First Law of Thermodynamics	449
42.3	Micro-Canonical Ensemble and Entropy	452
42.4	Relating Entropy to the Canonical Partition Function	453
42.5	Sample Problem 42.1	456
42.5.1	Solution	456
42.6	Relating the Statistical Mechanical Relation, $\underline{S} = k_B \ln W$, to the Thermodynamic Relation, $d\underline{S} = \delta Q_{\text{rev}}/T$	457

Lecture 43	Statistical Mechanical Interpretation of the Third Law of Thermodynamics, Calculation of the Helmholtz Free Energy and Chemical Potentials Using the Canonical Partition Function, and Sample Problems	459
43.1	Introduction	459
43.2	The Third Law of Thermodynamics and Entropy	459
43.3	Calculation of the Helmholtz Free Energy of a Pure Material Using the Canonical Partition Function	461
43.4	Sample Problem 43.1	462
43.4.1	Solution	462

43.5	Sample Problem 43.2	463
43.5.1	Solution	463
43.6	Sample Problem 43.3	464
43.6.1	Solution	465
Lecture 44	Grand-Canonical Ensemble, Statistical Fluctuations, and Sample Problems	467
44.1	Introduction	467
44.2	Grand-Canonical Ensemble	467
44.3	Statistical Fluctuations	471
44.4	Sample Problem 44.1	474
44.4.1	Solution	474
44.5	Sample Problem 44.2	475
44.5.1	Solution	475
44.6	Fluctuations in the Number of Molecules	478
44.7	Sample Problem 44.3	480
44.7.1	Solution	480
44.8	Equivalence of All the Ensembles in the Thermodynamic Limit	482
Lecture 45	Classical Statistical Mechanics and Sample Problem	485
45.1	Introduction	485
45.2	Classical Statistical Mechanics	485
45.3	Classical Molecular Partition Function	486
45.4	Classical Partition Function of an Atom in an Ideal Gas	487
45.5	Classical Partition Function of a Rigid Rotor	488
45.6	Classical Partition Function of a System Consisting of N Independent and Indistinguishable Molecules	489
45.7	Classical Partition Function of a System Consisting of N Interacting and Indistinguishable Molecules	490
45.8	Sample Problem 45.1	491
45.8.1	Solution	491
45.9	Simultaneous Treatment of Classical and Quantum Mechanical Degrees of Freedom	492
45.10	Equipartition of Energy	493
Lecture 46	Configurational Integral and Statistical Mechanical Derivation of the Virial Equation of State	495
46.1	Introduction	495
46.2	Modeling Gases at Number Densities Approaching Zero	495
46.3	Modeling Gases at Higher Number Densities	497

	46.4	Derivation of the Virial Equation of State Using the Grand-Canonical Partition Function	497
Lecture 47		Virial Coefficients in the Classical Limit, Statistical Mechanical Derivation of the van der Waals Equation of State, and Sample Problem	505
	47.1	Introduction	505
	47.2	Virial Coefficients in the Classical Limit	505
	47.3	Spatial Dependence of the Two-Body Interaction Potential Including Its Long-Range Asymptotic Behavior	508
	47.4	Sample Problem 47.1: Calculate the Second Virial Coefficient Corresponding to the Hard-Sphere Interaction Potential	509
		47.4.1 Solution	509
	47.5	Calculating the Second Virial Coefficient Corresponding to an Interaction Potential Consisting of a Hard-Sphere Repulsion and a van der Waals Attraction	511
	47.6	Important Remarks About the Behavior of Interaction Potentials	512
	47.7	Derivation of the van der Waals Equation of State Using Statistical Mechanics	513
Lecture 48		Statistical Mechanical Treatment of Chemical Reaction Equilibria and Sample Problem	515
	48.1	Introduction	515
	48.2	Expressing the Equilibrium Constant Using Partition Functions	515
	48.3	Relating the Pressure-Based and the Number Density-Based Equilibrium Constants for Ideal Gas Mixtures	519
	48.4	Sample Problem 48.1	519
		48.4.1 Solution	520
Lecture 49		Statistical Mechanical Treatment of Binary Liquid Mixtures	523
	49.1	Introduction	523
	49.2	Modeling Binary Liquid Mixtures Using a Statistical Mechanical Approach	523
	49.3	Calculating ΔS_{mix} Using the Micro-Canonical Ensemble	524
	49.4	Range of Validity of the Lattice Description of Binary Liquid Mixtures	525
	49.5	Lattice Theory Calculation	526

	49.6	Calculation of Chemical Potentials	528
	49.7	Molecular Characteristics of Ideal Solutions	529
Lecture 50		Review of Part III and Sample Problem	531
	50.1	Introduction	531
	50.2	Canonical Ensemble	531
	50.3	Average Properties in the Canonical Ensemble	532
	50.4	Calculation of the Canonical Partition Function	533
	50.5	Molecular Partition Functions of Ideal Gases	534
	50.6	Summary of Thermodynamic Functions of Ideal Gases	536
	50.7	Grand-Canonical Ensemble	536
	50.8	Average Properties in the Grand-Canonical Ensemble	537
	50.9	Micro-Canonical Ensemble	538
	50.10	Average Entropy in the Micro-Canonical Ensemble	538
	50.11	Classical Statistical Mechanics	538
	50.12	Calculation of Virial Coefficients	539
	50.13	Statistical Mechanical Treatment of Chemical Reaction Equilibria	540
	50.14	Statistical Mechanical Treatment of Binary Liquid Mixtures	540
	50.15	Useful Constants in Statistical Mechanics	540
	50.16	Useful Relations in Statistical Mechanics	540
	50.17	Sample Problem 50.1	541
	50.17.1	Solution	541
		Solved Problems for Part I	545
		Solved Problems for Part II	639
		Solved Problems for Part III	706
