I Foundations

1 *Superposition, Entanglement and Reversibility* 3

1.1 Superposition and Entanglement 4

1.2 The Born Rule 5

1.3 Schrödinger's Equation 8

1.4 The Physics of Computation 11

2 *A Brief History of Quantum Computing* 15

2.1 Early Developments and Algorithms 16

2.2 Shor and Grover 18

2.3 Defining a Quantum Computer 19

3 *Qubits, Operators and Measurement* 23

3.1 Quantum Operators 28

 Unary Operators 28

 Binary Operators 32

 Ternary Operators 34

3.2	Comparison with Classical Gates	36
3.3	Universality of Quantum Operators	37
3.4	Gottesman-Knill and Solovay-Kitaev	37
3.5	The Bloch Sphere	38
3.6	The Measurement Postulate	39
3.7	Computation-in-Place	41

4 *Complexity Theory* 43

4.1	Problems vs. Algorithms	43
4.2	Time Complexity	44
4.3	Complexity Classes	46
4.4	Quantum Computing and the Church-Turing Thesis	49

II Hardware and Applications

5 *Building a Quantum Computer* 53

5.1	Assessing a Quantum Computer	54
5.2	Neutral Atoms	55
5.3	NMR	56
5.4	NV Center-in-Diamond	57
5.5	Photonics	58
5.6	Spin Qubits	60
5.7	Superconducting Qubits	61
5.8	Topological Quantum Computation	63
5.9	Trapped Ion	64
5.10	Summary	65

6 *Development Libraries for Quantum Computer Programming* 676.1 Quantum Computers and QC Simulators **68**6.2 Cirq **70**6.3 Qiskit **72**6.4 Forest **75**6.5 Quantum Development Kit **77**6.6 Dev Libraries Summary **80**Using the Libraries **81**Other Development Libraries **81**6.7 Additional Quantum Programs **82**Bell States **82**Gates with Parameters **84****7 *Teleportation, Superdense Coding and Bell's Inequality* 87**7.1 Quantum Teleportation **87**7.2 Superdense Coding **90**7.3 Code for Quantum Teleportation and Superdense Communication **91**7.4 Bell Inequality Test **94****8 *The Canon: Code Walkthroughs* 101**8.1 The Deutsch-Jozsa Algorithm **103**8.2 The Bernstein-Vazirani Algorithm **110**8.3 Simon's Problem **113**8.4 Quantum Fourier Transform **114**8.5 Shor's Algorithm **117**RSA Cryptography **117**The Period of a Function **119**Period of a Function as an Input to a Factorization Algorithm **121**

8.6 Grover's Search Algorithm 135

Grover's Algorithm in Qiskit 140

3-Qubit Grover's Algo 141

9 *Quantum Computing Methods* 143

9.1 Variational Quantum Eigensolver 143

VQE with Noise 148

More Sophisticated Ansatzes 150

9.2 Quantum Chemistry 151

9.3 Quantum Approximate Optimization Algorithm (QAOA) 156

Example Implementation of QAOA 159

9.4 Machine Learning on Quantum Processors 167

9.5 Quantum Phase Estimation 174

Implementation of QPE 177

9.6 Solving Linear Systems 180

Description of the HHL Algorithm 182

Example Implementation of the HHL Algorithm 184

9.7 Quantum Random Number Generator 192

9.8 Quantum Walks 194

Implementation of a Quantum Walk 196

9.9 Unification Framework for Quantum Algorithms (QSVT) 202

9.10 Dequantization 203

9.11 Summary 205

10 *Applications and Quantum Supremacy* 207

10.1 Applications 207

Quantum Simulation and Chemistry 207

Sampling from Probability Distributions 208

Linear Algebra Speedup with Quantum Computers 208

Optimization 208

Tensor Networks 208

10.2 Quantum Supremacy	208
Random Circuit Sampling	209
Other Problems for Demonstrating Quantum Supremacy	214
Quantum Advantage and Beyond Classical Computation	214
10.3 Quantum Error Correction	215
Context and Importance	215
Important Preliminaries	216
Motivating Example: The Repetition Code	217
The Stabilizer Formalism	219
10.4 Doing Physics with Quantum Computers	224

III Toolkit

11 <i>Mathematical Tools for Quantum Computing I</i>	227
11.1 Introduction and Self-Test	227
11.2 Linear Algebra	229
Vectors	229
Introduction to Dirac Notation	230
Basic Vector Operations	231
The Norm of a Vector	234
The Dot Product	237
11.3 The Complex Numbers and the Inner Product	240
Complex Numbers	240
The Inner Product as a Refinement of the Dot Product	242
The Polar Coordinate Representation of a Complex Number	246
11.4 A First Look at Matrices	254
Basic Matrix Operations	254
The Identity Matrix	261
Transpose, Conjugate and Trace	263
Matrix Exponentiation	270
11.5 The Outer Product and the Tensor Product	271
The Outer Product as a Way of Building Matrices	271

The Tensor Product	273
11.6 Set Theory	276
The Basics of Set Theory	276
The Cartesian Product	279
Relations and Functions	280
Important Properties of Functions	286
11.7 The Definition of a Linear Transformation	291
11.8 How to Build a Vector Space From Scratch	293
Groups	294
Rings	300
Fields	305
The Definition of a Vector Space	308
Subspaces	311
11.9 Span, Linear Independence, Bases and Dimension	313
Span	313
Linear Independence	315
Bases and Dimension	317
Orthonormal Bases	320
12 <i>Mathematical Tools for Quantum Computing II</i>	323
12.1 Linear Transformations as Matrices	323
12.2 Matrices as Operators	328
An Introduction to the Determinant	328
The Geometry of the Determinant	332
Matrix Inversion	334
12.3 Eigenvectors and Eigenvalues	341
Change of Basis	344
12.4 Further Investigation of Inner Products	346
The Kronecker Delta Function as an Inner Product	349
12.5 Hermitian Operators	350
Why We Can't Measure with Complex Numbers	350
Hermitian Operators Have Real Eigenvalues	352

12.6	Unitary operators	353
12.7	The Direct Sum and the Tensor Product	354
	The Direct Sum	354
	The Tensor Product	357
12.8	Hilbert Space	360
	Metrics, Cauchy Sequences and Completeness	360
	An Axiomatic Definition of the Inner Product	364
	The Definition of Hilbert Space	365
12.9	The Qubit as a Hilbert Space	366
13	<i>Mathematical Tools for Quantum Computing III</i>	371
13.1	Boolean Functions	371
13.2	Logarithms and Exponentials	372
13.3	Euler's Formula	374
14	<i>Dirac Notation</i>	377
14.1	Vectors	377
14.2	Vector operations	378
	Inner and Outer Products	378
14.3	Tensor Products	379
14.4	Notation for PDF and Expectation Value	380
15	<i>Table of Quantum Operators and Core Circuits</i>	383
	<i>Works Cited</i>	387
	<i>Index</i>	421
