

Steven P. Lalley

Random Walks on Infinite Groups

 Springer

Contents

1	First Steps	1
1.1	Prologue: Gambler's Ruin	1
1.2	Groups and Their Cayley Graphs	3
1.3	Random Walks: Definition	9
1.4	Recurrence and Transience	12
1.5	Symmetric Random Walks on \mathbb{Z}^d	16
1.6	Random Walks on $\mathbb{Z}_2 * \mathbb{Z}_2 * \mathbb{Z}_2$	18
1.7	Lamplighter Random Walks	24
1.8	Excursions of Recurrent Random Walks [†]	29
2	The Ergodic Theorem	33
2.1	Formulation of the Theorem	33
2.2	The Range of a Random Walk	37
2.3	Cut Points of a Random Walk	39
2.4	Proof of the Ergodic Theorem	45
2.5	Non-Ergodic Transformations [†]	49
3	Subadditivity and Its Ramifications	57
3.1	Speed of a Random Walk	57
3.2	Subadditive Sequences	58
3.3	Kingman's Subadditive Ergodic Theorem	62
3.4	The Trail of a Lamplighter	64
3.5	Proof of Kingman's Theorem [†]	68
4	The Carne-Varopoulos Inequality	73
4.1	Statement and Consequences	73
4.2	Chebyshev Polynomials	75
4.3	A Transfer Matrix Inequality	77
4.4	Markov Operators	80
5	Isoperimetric Inequalities and Amenability	87
5.1	Amenable and Nonamenable Groups	87
5.2	Klein's Ping-Pong Lemma	90

5.3	Kesten's Theorem: Amenable Groups	92
5.4	The Dirichlet Form	93
5.5	Sobolev-Type Inequalities	95
5.6	Kesten's Theorem: Nonamenable Groups.....	96
5.7	Nash-Type Inequalities.....	97
6	Markov Chains and Harmonic Functions	107
6.1	Markov Chains	107
6.2	Harmonic and Superharmonic Functions	112
6.3	Space-Time Harmonic Functions [†]	116
6.4	Reversible Markov Chains [†]	118
7	Dirichlet's Principle and the Recurrence Type Theorem	123
7.1	Dirichlet's Principle	123
7.2	Rayleigh's Comparison Principle.....	130
7.3	Varopoulos' Growth Criterion	133
7.4	Induced Random Walks on Subgroups.....	134
8	Martingales.....	139
8.1	Martingales: Definitions and Examples	140
8.2	Doob's Optional Stopping Formula	142
8.3	The Martingale Convergence Theorem	145
8.4	Martingales and Harmonic Functions [†]	149
8.5	Reverse Martingales.....	151
9	Bounded Harmonic Functions	155
9.1	The Invariant σ -Algebra I.....	155
9.2	Absolute Continuity of Exit Measures	159
9.3	Two Examples	161
9.4	The Tail σ -Algebra T	165
9.5	Weak Ergodicity and the Liouville Property	168
9.6	Coupling	170
9.7	Tail Triviality Implies Weak Ergodicity	174
10	Entropy	177
10.1	Avez Entropy and the Liouville Property	177
10.2	Shannon Entropy and Conditional Entropy	178
10.3	Avez Entropy	180
10.4	Conditional Entropy on a σ -Algebra	182
10.5	Avez Entropy and Boundary Triviality	185
10.6	Entropy and Kullback-Leibler Divergence.....	187
11	Compact Group Actions and Boundaries	191
11.1	Γ -Spaces	191
11.2	Stationary and Invariant Measures	194
11.3	Transitive Group Actions	198
11.4	μ -Processes and μ -Boundaries	200
11.5	Boundaries and Speed.....	206

- 11.5.1 A. Random Walks on \mathbb{F}_k 206
- 11.5.2 B. Random Walks on $SL(2, \mathbb{Z})$ 208
- 11.6 The Busemann Boundary 211
- 11.7 The Karlsson–Ledrappier Theorem 215
- 12 Poisson Boundaries** 221
 - 12.1 Poisson and Furstenberg-Poisson Boundaries 221
 - 12.2 Entropy of a Boundary 227
 - 12.3 Lamplighter Random Walks[†] 233
 - 12.4 Existence of Poisson Boundaries 238
- 13 Hyperbolic Groups** 243
 - 13.1 Hyperbolic Metric Spaces 243
 - 13.2 Quasi-Geodesics 248
 - 13.3 The Gromov Boundary of a Hyperbolic Space 254
 - 13.4 Boundary Action of a Hyperbolic Group 263
 - 13.5 Random Walks on Hyperbolic Groups 269
 - 13.6 Cannon’s Lemma 273
 - 13.7 Random Walks: Cone Points 276
- 14 Unbounded Harmonic Functions** 283
 - 14.1 Lipschitz Harmonic Functions 283
 - 14.2 Virtually Abelian Groups[†] 285
 - 14.3 Existence of Harmonic Functions 292
 - 14.4 Poincaré and Cacciopoli Inequalities 298
 - 14.5 The Colding-Minicozzi-Kleiner Theorem 301
 - 14.5.1 A. Preliminaries: Positive Semi-Definite Matrices 303
 - 14.5.2 B. Preliminaries: Efficient Coverings 305
 - 14.5.3 C. The Key Estimate 306
 - 14.5.4 D. Bounded Doubling 307
 - 14.5.5 E. The General Case 309
- 15 Groups of Polynomial Growth** 313
 - 15.1 The Kleiner Representation 313
 - 15.2 Subgroups of \mathbb{U}_D 318
 - 15.3 Milnor’s Lemma 325
 - 15.4 Sub-cubic Polynomial Growth 327
 - 15.5 Gromov’s Theorem 331
- A A 57-Minute Course in Measure–Theoretic Probability** 341
 - A.1 Definitions, Terminology, and Notation 341
 - A.2 Sigma Algebras 342
 - A.3 Independence 344
 - A.4 Lebesgue Space 346
 - A.5 Borel-Cantelli Lemma 346
 - A.6 Hoeffding’s Inequality 348
 - A.7 Weak Convergence 349

A.8	Likelihood Ratios	352
A.9	Conditional Expectation	354
