Magneto-optics

An introduction

DE GRUYTER

Contents

Preface — V

1 Introduction — 1

- 1.1 Definition of magneto-optics — 1
- 1.2 History of magneto-optics — 1
- 1.3 Classification of magneto-optic effects — 10
 - 1.3.1 Faraday effect — 10
 - 1.3.2 Voigt effect — 11
 - 1.3.3 Cotton–Mouton effect — 12
 - 1.3.4 Majorana effect — 12
 - 1.3.5 Magneto-optic Kerr effect — 12

2 Basics of solid-state optics — 15

- 2.1 Maxwell equations in matter and complex optical quantities — 15
- 2.2 Fresnel equations — 23
 - 2.2.1 Electric field vector perpendicular to the plane of incidence — 24
 - 2.2.2 Magnetic field vector perpendicular to the plane of incidence — 26
- 2.3 Discussion of the Fresnel equations — 28
 - 2.3.1 Non-absorbing materials — 29
 - 2.3.2 Absorbing materials — 37
- 2.4 Polarization and sign convention — 41
 - 2.4.1 Definition of polarization states — 41
 - 2.4.2 Phenomenological model of the Faraday rotation — 46
- 2.5 Comprehension questions — 49
 - 2.5.1 Basic magneto-optic effects — 49
 - 2.5.2 Maxwell equations — 49
 - 2.5.3 Fresnel equations — 50
 - 2.5.4 Polarization states — 51
- 2.6 Problems — 51
 - 2.6.1 Kerr geometries — 51
 - 2.6.2 Complex wave vectors — 52
 - 2.6.3 Absorption — 52
 - 2.6.4 Phase difference in absorbing materials — 53
 - 2.6.5 Poynting vector — 53
 - 2.6.6 Rotation of polarization by reflection from an isotropic absorbing material — 53
 - 2.6.7 Dielectric tensor in an absorbing anisotropic material — 53
 - 2.6.8 Polarization states — 54

2.6.9	Brewster angle —	54
2.6.10	Complex angle of refraction in a nonabsorbing material —	55
2.6.11	Angle of maximum phase difference by total internal reflection —	55
2.6.12	Maximum of phase difference by total internal reflection —	55
2.6.13	Planes of constant phase and constant amplitude in an absorbing material —	56
2.6.14	Elliptically polarized light —	56
2.7	Solutions —	57
2.7.1	Kerr geometries —	57
2.7.2	Complex wave vectors —	57
2.7.3	Absorption —	58
2.7.4	Phase difference in absorbing materials —	59
2.7.5	Poynting vector —	60
2.7.6	Rotation of polarization by reflection from an isotropic absorbing material —	62
2.7.7	Dielectric tensor in absorbing anisotropic material —	67
2.7.8	Polarization states —	69
2.7.9	Brewster angle —	69
2.7.10	Complex angle of refraction in a nonabsorbing material —	70
2.7.11	Angle of maximum phase difference by total internal reflection —	71
2.7.12	Maximum of phase difference by total internal reflection —	74
2.7.13	Planes of constant phase and constant amplitude in an absorbing material —	75
2.7.14	Elliptically polarized light —	78
3	Classical theory of dispersion —	81
3.1	Lorentz theory of absorption and dispersion in insulators —	81
3.2	Lorentz theory including a homogeneous magnetic field – magnetic circular dichroism —	85
3.3	Microwave cyclotron resonance absorption —	89
3.4	Splitting of the reflectivity minimum in a magnetic field —	95
3.5	Relation between experimental quantities and off-diagonal optical conductivity —	99
3.6	Comprehension questions —	101
3.6.1	Lorentz theory —	101
3.6.2	Cyclotron resonance, splitting of reflectivity minimum —	102
3.6.3	Relation between experimental quantities and off-diagonal conductivity —	102
3.7	Problems —	102
3.7.1	Classical theory of dispersion —	102

3.7.2	Excitations in the X-ray range —	103
3.7.3	Frequency dependence of free electrons at large frequencies —	103
3.7.4	Cyclotron-resonance measurement —	103
3.7.5	Plasmons in germanium —	104
3.7.6	Law of Hagen-Rubens and DC conductivity —	104
3.7.7	Complex polar Kerr effect —	105
3.8	Solutions —	106
3.8.1	Classical theory of dispersion —	106
3.8.2	Excitations in the X-ray range —	109
3.8.3	Frequency dependence of free electrons at large frequencies —	112
3.8.4	Cyclotron-resonance measurement —	112
3.8.5	Plasmons in germanium —	113
3.8.6	Law of Hagen-Rubens and DC conductivity —	115
3.8.7	Complex polar Kerr effect —	117
4	Experimental aspects of magneto-optics —	121
4.1	Jones matrix theory —	121
4.1.1	Polarizer —	124
4.1.2	Phase shifter —	125
4.1.3	Rotator —	128
4.1.4	Jones matrix of a magneto-optically active sample —	128
4.1.5	Principle of Senarmont —	130
4.2	Experimental methods —	130
4.2.1	Angle-sensitive methods —	131
4.2.2	Phase-sensitive methods —	140
4.2.3	Intensity methods —	141
4.3	Enhancement effects (optical constants effects) —	144
4.3.1	Interface effect —	145
4.3.2	Interference effect —	146
4.3.3	Plasma-edge effect —	149
4.4	Comprehension questions —	152
4.4.1	Jones matrix theory —	152
4.4.2	Experimental methods —	152
4.4.3	Enhancement effects —	153
4.5	Problems —	153
4.5.1	Circular polarizer —	153
4.5.2	Faraday modulator —	153
4.5.3	Ellipticity measurement —	154
4.6	Solutions —	155
4.6.1	Circular polarizer —	155

4.6.2	Faraday modulator —	157
4.6.3	Ellipticity measurement —	160
5	Microscopic model —	165
5.1	Becquerel equation and its relation to Zeeman splitting —	165
5.2	Absorptive/dispersive quantities and Kramers-Kronig transformation —	168
5.3	Origin of spin-orbit interaction —	169
5.4	Quantum-mechanical calculation of the optical conductivity tensor elements —	170
5.5	Relation between off-diagonal conductivity and transition rates —	176
5.6	Comprehension questions —	177
5.6.1	Becquerel equation —	177
5.6.2	Dispersive and absorptive quantities: Kramers-Kronig transformation —	177
5.6.3	Spin-orbit interaction —	178
5.6.4	Quantum-mechanical calculation of the optical conductivity tensor —	178
5.7	Problems —	178
5.7.1	Faraday rotation of quartz —	178
5.7.2	Faraday rotation of an $S \rightarrow P$ transition —	179
5.8	Solutions —	179
5.8.1	Faraday rotation of quartz —	179
5.8.2	Faraday rotation of an $S \rightarrow P$ transition —	180
6	Magneto-optic properties of magnetic semiconductors —	183
6.1	General properties of magnetic semiconductors —	183
6.2	Absorption of unpolarized light in Eu chalcogenides —	185
6.3	Magnetic circular birefringence and dichroism —	189
6.4	Comprehension questions —	198
6.4.1	Eu chalcogenides —	198
6.5	Problems —	198
6.5.1	Faraday rotation of a $4f \rightarrow 5d$ transition —	198
6.6	Solutions —	199
6.6.1	Faraday rotation of a $4f \rightarrow 5d$ transition —	199
7	Relation between magnetism and magneto-optics —	204
7.1	Determination of easy axis of magnetization —	209
7.2	Determination of exchange coupling —	211
7.3	Determination of phase separation —	213
7.4	Comprehension questions —	216

7.4.1	Relation between magnetism and magneto-optics —	216
7.5	Problems —	216
7.5.1	Magnetic field dependence of Faraday and polar Kerr effect —	216
7.5.2	Hysteresis curve —	217
7.6	Solutions —	217
7.6.1	Magnetic field dependence of Faraday and polar Kerr effect —	217
7.6.2	Hysteresis curve —	219

Appendix Alternative representation of magneto-optic effects — 221
