

Steroid and Endocannabinoid Profiling in Hair and Nails

From Analytical Method Development to Applications in Neuropsychopharmacological Research

Dissertation

zur

**Erlangung der naturwissenschaftlichen Doktorwürde
(Dr. sc. nat.)**

vorgelegt der

Mathematisch-naturwissenschaftlichen Fakultät

der

Universität Zürich

von

Clarissa Daniela Vögel

aus

Österreich

Promotionskommission

Prof. Dr. Michael Arand (Vorsitz)

PD Dr. Tina Binz (Leitung der Dissertation)

Prof. Dr. Thomas Krämer

Prof. Dr. Laurent Bigler

Zürich, 2022

Table of Contents

Summary	3
Introduction	4
Stress: glucocorticoid and endocannabinoid signaling	4
Stress and how it can be measured	6
Incorporation of substances into keratinized matrices	7
Quantitative determination of endogenous compounds in keratinized matrices - analytical considerations and challenges	9
Psychoactive drug use and its influence on the HPA axis and the eCB system	12
Aim of the thesis	14
Study I	15
Endogenous steroid hormones in hair: Investigations on different hair types, pigmentation effects and correlation to nails	15
Study II	25
Simultaneous quantification of steroid hormones and endocannabinoids (ECs) in human hair using an automated supported liquid extraction (SLE) and LC-MS/MS – Insights into EC baseline values and correlation to steroid concentrations	25
Study III	36
Alterations of stress-related glucocorticoids and endocannabinoids in hair of chronic cocaine users	36
Conclusion	57
References	59
Addendum	63
Curriculum vitae	63
Acknowledgement	66
