Table of Contents

Summary	5
Table of Contents	7

Chapter I

General Introduction	13
1.1 The <i>Pseudomonas</i> genus	13
1.2 'Accessory' genome of the <i>Pseudomonas putida</i> group	14
1.2.1 Genomic islands (GEIs) in the <i>P. putida</i> group	15
1.2.2 Previous work leading to this study	16
1.3 Beneficial plant-microbe interactions in the rhizosphere	17
1.4 Bacterial biofilms	19
1.4.1 Biofilm development	20
1.4.2 Mechanisms of interbacterial competition in biofilm communities	21
1.5 Secretion systems in bacteria	21
1.5.1 Bacterial defence mechanisms	22
1.5.2 Antibacterial effectors and their mode of action	23
1.5.3. Type VI secretion system	24
1.5.4 Type IV secretion systems	26
1.5.4.1 Type IVA secretion system	26
1.5.4.2 Type IVB secretion system	27
1.6 Objective of the study	31
1.7 References	33

Chapter II

Genome plasticity of plant-associated <i>Pseudomonas</i> strains is driven by HGT of genomic islands	43
2.1 Abstract	45
2.2 Introduction	46
2.3 Results	47
2.3.1 General genome characteristics and phylogeny	47

2.3.2 <i>P. putida</i> IsoF harbors a diverse set of unique genomic islands.....	49
3.2.3 PAIs might be involved in IsoF fitness and adaptability	53
3.2.4 Putative genomic islands of IsoF	54
3.2.5 The <i>ppu</i> QS system and the putisolvin biosynthesis cluster are encoded by genomic islands	55
3.2.6 IsoF carries a unique GEI encoding a T4BSS which functions as a bacterial killing device.....	56
2.4 Discussion	58
2.5 Methods	60
2.6 Supplementary Data	62
2.6.1 Supplementary Figures	62
2.6.2 Supplementary Tables	64
2.7 References	69
2.8 Author contributions.....	75

Chapter III

IsoF employs a type IVB secretion system to kill bacteria in a contact-dependent manner ..77

3.1 Abstract.....	79
3.2 Introduction	80
3.3. Results.....	82
3.3.1 IsoF exhibits contact-dependent antagonism against a wide range of Gram- negative bacteria.....	82
3.3.2 IsoF utilizes a type IVB secretion system for bacterial killing.....	83
3.3.3 The <i>kib</i> gene cluster is part of a unique genomic island present in only few <i>Pseudomonas</i> strains.....	86
3.3.4 The <i>kib</i> gene cluster encodes an effector-immunity pair (E-I pair)	88
3.3.5 Identification of a <i>kib</i> immunity protein through transposon sequencing	89
3.3.6 Colony variants of Δ 32-33 exhibited resistance against IsoF's effector delivery ...	92
3.4 Discussion	95
3.5 Methods	99
3.6 Supplementary Data	105

3.6.1 Supplementary Figures	105
3.6.2 Supplementary Tables	114
3.7 References	130
Chapter IV	
Exploring the ecological consequences of interbacterial contact-dependent competition in IsoF	139
4.1 Abstract.....	141
4.2 Introduction	142
4.3. Results.....	144
4.3.1 The <i>kib</i> killing system enables IsoF to invade an established biofilm	144
4.3.3 IsoF is able to persist in the rhizosphere and protect tomato plants from two major phytopathogens.....	153
4.3.4 <i>Kib</i> -mediated killing allows IsoF to protect tomato plants from the phytopathogen <i>Rastonia solanacearum</i>	156
4.4 Discussion	159
4.5 Materials and Methods	161
4.6 Supplementary Data	166
4.6.1 Supplementary Figures	166
4.6.2 Supplementary Tables	171
4.7 References	174
Chapter V	
General discussion and future perspectives	183
5.1 References	188
Appendix	193
Abbreviations	193
List of Figures	196
List of Tables	200
Curriculum Vitae.....	201
Acknowledgements	205
