

# Essays on Portfolio Credit Risk

Dissertation  
zur  
Erlangung der naturwissenschaftlichen Doktorwürde  
(Dr. sc. nat.)  
vorgelegt der  
Mathematisch-naturwissenschaftlichen Fakultät  
der  
Universität Zürich

von  
Gabriele Visentin  
aus  
Italien

Promotionskommission  
Prof. Dr. Ashkan Nikeghbali (Leitung der Dissertation)  
Prof. Dr. Jean Bertoin (Vorsitz)  
Prof. Dr. Valentin Féray  
Prof. Dr. Pierre-Loïc Méliot  
Prof. Dr. Patrick Cheridito

Zürich, 2022

# Contents

<b>Abstract</b>	<b>iii</b>
<b>Acknowledgements</b>	<b>ix</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Main results and thesis outline . . . . .	1
1.1.1 Mod- $\phi$ approximation schemes . . . . .	2
1.1.2 Universal approximation via Restricted Boltzmann Machines . . . . .	4
1.1.3 On the fragility of mutual insurance arrangements . . . . .	6
1.1.4 Network valuation in financial systems . . . . .	7
<b>2 Portfolio credit risk models</b>	<b>9</b>
2.1 Introduction to credit risk . . . . .	9
2.2 Overview of credit risk models . . . . .	13
2.2.1 Reduced-form models . . . . .	15
2.2.2 Structural models . . . . .	16
2.3 Overview of estimation methods . . . . .	19
2.3.1 Recursive methodology . . . . .	19
2.3.2 Large deviations approximation . . . . .	21
2.3.3 Stein's method: first-order correction to the Gaussian approximation . . . . .	22
2.3.4 Stein–Chen's method: first-order correction to the Poisson approximation . . . . .	23
2.3.5 Monte Carlo simulation . . . . .	24
2.3.6 Importance sampling . . . . .	25
<b>3 Mod-<math>\phi</math> approximation schemes</b>	<b>29</b>
3.1 Mod- $\phi$ convergence . . . . .	29
3.2 Mod- $\phi$ approximation schemes . . . . .	31
3.3 Mod-Poisson approximation . . . . .	35
3.4 Application: Estimation of risk measures . . . . .	40
3.4.1 Background . . . . .	40

3.4.2	Estimation of VaR and ES . . . . .	42
3.4.3	Computational time . . . . .	48
3.5	Application: CDO pricing . . . . .	51
3.5.1	Background . . . . .	51
3.5.2	Estimation of call prices . . . . .	56
3.5.3	Default leg, premium leg, and fair spread . . . . .	57
3.6	Generalized Chen-Stein inequality . . . . .	60
3.6.1	Poisson approximation . . . . .	60
3.6.2	Proof of the inequality . . . . .	62
3.7	Mod-compound Poisson approximation . . . . .	74
<b>4</b>	<b>Universal approximation via Restricted Boltzmann Machines</b>	<b>77</b>
4.1	Introduction to RBMs . . . . .	77
4.1.1	Model description . . . . .	77
4.1.2	Training . . . . .	79
4.2	The credit RBM model . . . . .	80
4.3	Importance Sampling (IS) for RBMs . . . . .	83
4.3.1	Introduction to importance sampling in credit risk . . . . .	83
4.3.2	Importance sampling for RBMs . . . . .	84
4.3.3	Estimation of ratios of partition functions . . . . .	85
4.3.4	Performance of the IS estimator . . . . .	88
4.4	Sector structure via hidden units' receptive fields . . . . .	89
4.5	Stress testing via conditional Gibbs sampling . . . . .	94
<b>5</b>	<b>On the fragility of mutual insurance arrangements</b>	<b>99</b>
5.1	Introduction . . . . .	99
5.1.1	Background and motivation . . . . .	101
5.2	The interbank liquidity model . . . . .	102
5.2.1	The state process in absence of cooperation . . . . .	103
5.2.2	Cooperation within finite groups . . . . .	105
5.3	Expected lifetime with cooperation and optimal size of coalitions . . . . .	107
5.3.1	The distress level in an N-coalition . . . . .	107
5.3.2	Regulation of systemic risk and the optimal size of coalitions . . . . .	109
5.4	Nash equilibria and stability of coalitions . . . . .	113
5.4.1	Formalisation of the game . . . . .	113
5.4.2	An analysis of stability of coalitions . . . . .	118
5.5	Boundaries of stability and numerical illustrations . . . . .	122
5.5.1	Characterisation of the non-cooperative populations . . . . .	122
5.5.2	Critical boundaries for stability . . . . .	123
5.5.3	Inefficiency zones of the Nash equilibria . . . . .	124

<b>6 Network valuation in financial systems</b>	<b>131</b>
6.1 Interbank clearing model . . . . .	131
6.2 Main results . . . . .	136
6.3 Relation with existing contagion models . . . . .	139
6.4 From clearing to ex-ante valuation . . . . .	140
6.4.1 Ex-ante valuation with geometric Brownian motion . . . . .	144
6.4.2 Stress testing: Merton vs network valuation . . . . .	145
<b>A Appendix to Chapter 3</b>	<b>149</b>
A.1 Some useful formulae . . . . .	149
A.2 Incidence algebras and the Möbius function . . . . .	150
<b>B Appendix to Chapter 4</b>	<b>153</b>
B.1 Empirical dataset . . . . .	153
B.2 Statistical estimation of factor copulas . . . . .	154
<b>C Appendix to Chapter 5</b>	<b>157</b>
C.1 Construction of the liquidity process . . . . .	157
C.2 Proof of Theorem 5.1 . . . . .	160
C.3 Proof of Theorem 5.2 . . . . .	164
C.4 Proof of Proposition 5.1 . . . . .	165
C.5 Proof of Theorem 5.3 . . . . .	166
<b>D Appendix to Chapter 6</b>	<b>169</b>
D.1 Proof of Theorem 6.1 . . . . .	169
D.2 Proof of Theorem 6.2 . . . . .	169
D.3 Proof of Theorem 6.3 . . . . .	170
D.4 Proofs of Propositions from 6.1 to 6.5, 6.6 . . . . .	171
<b>List of symbols</b>	<b>175</b>
