

STUDY OF SOME PROBLEMS  
IN THE APPROXIMATION OF  
NONLINEAR HYPERBOLIC PROBLEMS

DISSERTATION  
ZUR  
ERLANGUNG DER NATURWISSENSCHAFTLICHEN DOKTORWÜRDE  
(DR. SC. NAT.)  
VORGELEGT DER  
MATHEMATISCHE-NATURWISSENSCHAFTLICHEN FAKULTÄT  
DER  
UNIVERSITÄT ZÜRICH  
VON  
SEYEDEH FATEMEH NASSAJIAN MOJARRAD  
AUS  
IRAN

Promotionskommission  
Prof. Dr. Rémi Abgrall (Vorsitz und Leiter der Dissertation)  
Prof. Dr. Stefan Sauter  
Prof. Dr. Jean Bertoin

Zürich, 2023

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Motivation . . . . .	1
1.2	Organization and contributions . . . . .	3
<b>2</b>	<b>Preliminaries</b>	<b>5</b>
2.1	Hyperbolic systems of conservation laws . . . . .	5
2.1.1	Examples of conservation laws equations . . . . .	6
2.1.2	Classical solutions and the method of characteristics . . . . .	7
2.1.3	Weak formulation . . . . .	9
2.1.4	Entropy conditions . . . . .	10
2.2	Approximating methodologies . . . . .	11
2.2.1	Finite difference method . . . . .	12
2.2.2	Finite volume method . . . . .	14
2.2.3	Finite element method . . . . .	16
2.2.4	Discontinuous Galerkin method . . . . .	18
2.2.5	Residual distribution scheme for steady problems . . . . .	18
<b>3</b>	<b>Conservation of the local angular momentum</b>	<b>21</b>
3.1	Introduction . . . . .	21
3.2	Numerical scheme . . . . .	23
3.2.1	Some generalities . . . . .	23
3.2.2	Residual distribution scheme for unsteady problems . . . . .	24
3.2.3	Iterative timestepping method . . . . .	25
3.3	Angular momentum preservation: second order case . . . . .	28
3.3.1	Solution for triangular elements . . . . .	29
3.3.2	Solution for tetrahedrons . . . . .	29
3.4	Angular momentum preservation: the high order case . . . . .	31
3.5	Test cases . . . . .	35
3.5.1	Isentropic vortex . . . . .	35
3.5.2	Four isentropic vortexes . . . . .	37
3.5.3	Gresho vortex . . . . .	39
3.5.4	2D Sod problem . . . . .	42
3.5.5	Shu-Osher problem . . . . .	45
3.6	Discussion for DG . . . . .	46
3.7	Appendix . . . . .	47

3.7.1	PSI scheme . . . . .	47
3.7.2	Bézier polynomials: notations . . . . .	49
<b>4</b>	<b>An arbitrarily high order and asymptotic preserving kinetic scheme in compressible fluid dynamic</b>	<b>50</b>
4.1	Introduction . . . . .	50
4.2	Time discretisation . . . . .	52
4.2.1	An explicit high order timestepping approach . . . . .	52
4.2.2	Error estimate . . . . .	57
4.2.3	Time discretisation in the $L_2$ operator . . . . .	59
4.3	Space discretisation . . . . .	60
4.3.1	Definition of the $\delta^x$ and $\delta^y$ operators . . . . .	60
4.3.2	Limitation . . . . .	62
4.4	Stability analysis . . . . .	64
4.5	Test cases . . . . .	67
4.5.1	Scalar problems . . . . .	67
4.5.2	Euler equations . . . . .	68
<b>5</b>	<b>A new variable shape parameter strategy for RBF approximation using neural networks</b>	<b>76</b>
5.1	Introduction . . . . .	76
5.2	Radial Basis Functions (RBF) . . . . .	77
5.2.1	RBF interpolation . . . . .	78
5.2.2	RBF-FD method for solving steady-state and time dependent differential equations . . . . .	79
5.3	Multilayer perceptron (MLP) . . . . .	81
5.4	Methodology . . . . .	84
5.4.1	Dataset generation . . . . .	84
5.4.2	Data driven model . . . . .	85
5.4.3	Extension to 2-dimensional problems . . . . .	86
5.5	Numerical results . . . . .	87
5.5.1	Numerical results for 1D test cases . . . . .	87
5.5.2	Numerical results for 2D test cases . . . . .	94
5.6	Appendix . . . . .	101
5.6.1	Results for coordinate-based features in one dimensional case . . . . .	101
5.6.2	Results for 1D GARBF . . . . .	103
<b>6</b>	<b>Conclusions</b>	<b>106</b>
6.1	Future scope . . . . .	107
<b>Bibliography</b>		<b>109</b>
