|------------------------------------------------------------------------------------|----------------|
| <i>Preface</i>                                                                     | <i>page ix</i> |
| <b>1 Rotational Kinematics</b>                                                     | <b>1</b>       |
| 1.1 Preliminary Definitions                                                        | 1              |
| 1.2 Rotational Motion with Constant Speed                                          | 3              |
| 1.3 Acceleration in Rotational Motion                                              | 15             |
| 1.4 Rotational versus Linear Motion: Analogies                                     | 20             |
| <b>2 Torque and Static Equilibrium</b>                                             | <b>25</b>      |
| 2.1 Torque ( $\vec{\tau}$ )                                                        | 25             |
| 2.2 Static Equilibrium of a Rigid Body                                             | 36             |
| 2.3 Some Cool Theorems                                                             | 46             |
| <b>3 Rotational Dynamics</b>                                                       | <b>54</b>      |
| 3.1 Newton's Second Law for Rotational Motion                                      | 54             |
| 3.2 Systems of Objects Combining Translational<br>and Rotational Motion            | 65             |
| <b>4 Moment of Inertia</b>                                                         | <b>72</b>      |
| 4.1 Moment of Inertia of Systems of Discrete Masses and<br>Continuous Rigid Bodies | 72             |
| 4.2 Some More Cool Theorems                                                        | 81             |
| 4.3 Moment of Inertia of Composite Areas                                           | 86             |
| <b>5 Angular Momentum</b>                                                          | <b>90</b>      |
| 5.1 Review: Linear Momentum ( $\vec{p}$ )                                          | 90             |
| 5.2 Definition of Angular Momentum ( $\vec{L}$ )                                   | 91             |
| 5.3 Angular Momentum of Systems of Discrete Masses<br>and Continuous Rigid Bodies  | 94             |
| 5.4 Change in Angular Momentum due to External Torques                             | 96             |

|          |                                                                                        |            |
|----------|----------------------------------------------------------------------------------------|------------|
| 5.5      | Newton's Second Law for Rotational Motion<br>with Constant Moment of Inertia           | 97         |
| 5.6      | Notes on Angular Momentum and Newton's Second Law                                      | 97         |
| 5.7      | Conservation of Angular Momentum                                                       | 100        |
| <b>6</b> | <b>Work and Energy</b>                                                                 | <b>110</b> |
| 6.1      | Review: Work due to a Force                                                            | 110        |
| 6.2      | Work due to a Torque                                                                   | 111        |
| 6.3      | Work-Kinetic Energy Theorem for Rotational Motion                                      | 112        |
| 6.4      | Rotational Kinetic Energy of Systems of Discrete Masses<br>and Continuous Rigid Bodies | 115        |
| 6.5      | Power due to a Force or a Torque                                                       | 118        |
| 6.6      | Conservation of Energy and Conservation<br>of Mechanical Energy                        | 124        |
| <b>7</b> | <b>Combining Translation and Rotation: A First Look</b>                                | <b>133</b> |
| 7.1      | General Motion of a Rigid Body: Chasles' Theorem                                       | 133        |
| 7.2      | The Kinematics of Rolling Motion                                                       | 133        |
| 7.3      | The Dynamics of Rolling Motion                                                         | 141        |
| 7.4      | Energy of Objects Executing both Translational<br>and Rotational Motion                | 149        |
| <b>8</b> | <b>Garden of Delights</b>                                                              | <b>157</b> |
| 8.1      | Gyroscopic Precession                                                                  | 158        |
| 8.2      | Angular Momentum Revisited                                                             | 162        |
| 8.3      | Rotation Matrices                                                                      | 164        |
