List of Figures	<i>page xi</i>
List of Tables	xv
Preface	xvii
List of Abbreviations and Acronyms	xx
1 Planet in Peril	1
1.1 Our Dynamic Environment	1
1.2 Recent Imbalances	3
1.3 The Earth System	7
1.4 The Road Ahead	9
1.5 The Intergovernmental Panel on Climate Change	12
1.6 The UN Climate Convention	16
Acknowledgements	17
Part I Chemistry	19
2 Atmospheric Composition and Chemistry	21
2.1 Composition of the Atmosphere	21
2.2 Background Tropospheric Chemistry	23
2.3 Atmospheric Pollution	27
2.4 Responses	33
2.5 Isotope Studies	36
2.6 Stable Isotopes	40
Summary	42
Further Reading	43
Review Questions	43
Exercises	43
3 Sources and Sinks of Greenhouse Gases	45
3.1 The Carbon Cycle	45
3.2 Carbon in the Ocean	49
3.3 Anthropogenic Perturbation	53
3.4 The Nitrogen Cycle	57

3.5 The Sulphur Cycle	58
Summary	60
Acknowledgements	60
Further Reading	61
Review Questions	61
Exercises	61
4 Atmospheric Aerosols	63
4.1 Aerosols: Characterisation	63
4.2 Primary Aerosols	64
4.3 Secondary Aerosols	66
4.4 Stratospheric Aerosols	68
4.5 Aerosols in the Atmosphere	71
4.6 Aerosol Effects	73
4.7 Aerosol Optics	75
4.8 Investigating Aerosols	79
Summary	86
Acknowledgements	86
Further Reading	87
Review Questions	87
Exercises	87
Part II Physics	89
5 The Dry Atmosphere	91
5.1 Thermodynamic Variables	91
5.2 The Gas Law	95
5.3 Thermodynamics of Gases	97
5.4 Kinetic Theory of Gases	101
Summary	104
Further Reading	104
Review Questions	104
Exercises	105
6 The Moist Atmosphere	106
6.1 Water in the Atmosphere	106
6.2 Elevation of Moist Air	110
6.3 Cloud Microphysics	114
Summary	117
Further Reading	118
Review Questions	118
Exercises	118

7 Atmospheric Circulation: Weather and Climate	120
7.1 Forces on Fluids	120
7.2 Thermal Circulation	124
7.3 The General Circulation	128
Summary	131
Further Reading	131
Review Questions	132
Exercises	132
 Part III Radiant Energy	 133
8 Radiant Energy, the Primary Climate Driver	135
8.1 Electromagnetic Radiation	135
8.2 Radiation and Climate	138
8.3 Grey Atmosphere Models	143
Summary	147
Further Reading	147
Review Questions	148
Exercises	148
 9 Solar Radiation and its Atmospheric Interactions	 149
9.1 Solar Radiation	149
9.2 Absorption in the Upper Atmosphere	153
9.3 Absorption and Scattering in the Troposphere	153
9.4 Nuclear Winter	155
9.5 Geoengineering	157
Summary	160
Further Reading	161
Review Questions	161
Exercises	161
 10 The Ozone Layer and (Its) Health	 163
10.1 Formation of the Ozone Layer	163
10.2 Catalytic Destruction	165
10.3 Biological Effects of UV Radiation	167
10.4 Antarctic Ozone Hole	170
10.5 The Montreal Protocol	173
Summary	174
Further Reading	175
Review Questions	175
Exercises	175

11 Long-Wave Radiation Transfer	176
11.1 Atomic Spectroscopy	176
11.2 Molecular Physics	179
11.3 Greenhouse Gas Spectroscopy	183
11.4 Infrared Transfer	186
11.5 Radiative Forcing	189
Summary	190
Further Reading	190
Review Questions	190
Exercises	191
12 Remote Sensing of a Dynamic Environment	192
12.1 Remote Sensing	192
12.2 Ground-Based Remote Sensing	194
12.3 Orbits and Observations	197
12.4 Satellite Observations for Weather Forecasting	200
12.5 Birth of the Satellite Era	203
12.6 Environmental Observation in the 1990s	206
12.7 Environmental Observations: Twenty-First Century	209
12.8 NASA's Earth Observatory	213
Acknowledgement	215
Further Reading	215
Review Questions	216
Exercises	216
Part IV The Climate System	217
13 The Ocean's Role in Climate	219
13.1 The Ocean	219
13.2 Ocean Circulation	220
13.3 ENSO	224
13.4 Climatic Impacts of ENSO	227
13.5 Other Modes of Variability	229
13.6 Case Study: Australian Weather Extremes	234
Summary	235
Acknowledgements	235
Further Reading	236
Review Questions	236
Exercise	236
14 Interactions and Feedbacks in the Climate System	237
14.1 Components and Interactions	237
14.2 Atmospheric Feedbacks	240

14.3 Surface-Level Feedbacks	242
14.4 Energy-Balance Climate Models	244
14.5 Application	247
Summary	248
Acknowledgement	249
Further Reading	249
Review Questions	249
Exercises	249
15 Modelling Weather and Climate	251
15.1 General Circulation Models	251
15.2 Numerical Weather Prediction	254
15.3 Climate Models	258
15.4 Climate Modelling Studies	261
15.5 Climate Model Intercomparison Project, CMIP	263
15.6 Carbonator.org	265
Summary	268
Acknowledgements	268
Further Reading	269
Review Questions	269
Exercise	269
16 Climates Past	271
16.1 Methodologies and Lines of Evidence	271
16.2 Interesting Tales from Planetary History	272
16.3 Tertiary Climate	277
16.4 Pleistocene Climate	279
16.5 Holocene Climate	284
16.6 The Anthropocene	286
Summary	286
Acknowledgements	287
Further Reading	288
Review Questions	288
Exercise	288
Part V Our Changing Climate	289
17 Driving Climate Change	291
17.1 Effective Radiative Forcing	291
17.2 Natural Drivers	292
17.3 Greenhouse Gases	293
17.4 Aerosol Forcings	296
17.5 Other Forcings	299
17.6 Synthesis	301

Summary	305
Acknowledgements	306
Review Questions	306
Exercise	306
18 How, and <i>Why</i>, Is Our Climate Changing?	308
18.1 Large-Scale Indicators of Climate Change	308
18.2 Atmosphere and Earth's Surface	311
18.3 Cryosphere	320
18.4 Oceans	323
18.5 Biosphere	328
18.6 Key Working Group II Conclusions	330
Summary	331
Acknowledgements	332
Further Reading	332
Review Questions	333
Exercise	333
19 Recent Weather Extremes	334
19.1 Extremes	334
19.2 Temperature	337
19.3 Heavy Precipitation and Floods	344
19.4 Drought	346
19.5 Other Extremes	350
Summary	352
Further Comments	352
Acknowledgements	353
Further Reading	353
Review Questions	354
Exercise	354
20 Climate(s) of the Twenty-First Century	355
20.1 Charting a Path to the Future	355
20.2 Atmosphere	359
20.3 Cryosphere, Ocean, and Carbon Uptake	363
20.4 Climate Policy Implications	367
20.5 Solar Radiation Management (SRM)	369
Acknowledgements	372
Further Reading	372
Final Remarks	373
Glossary	377
Index	379

Figures

1.1 Atmospheric concentration of CO ₂ from measurements at Mauna Loa, USA.	page 4
1.2 Temperature anomalies, 1850–2021.	4
1.3 Climate science milestones, between 1817 and 2021.	6
1.4 Changes are occurring throughout the climate system.	8
1.5 The structure of the AR6 WGI Report.	15
2.1 Molecular structure of acetaldehyde and peroxyacetyl nitrate.	30
2.2 The CSIRO smog chamber.	31
2.3 The pH scale: from battery acid to caustic soda.	32
2.4 Impacts of acid rain on forest.	33
2.5 The uranium-238 decay chain.	38
3.1 Simple box model of the carbon system.	47
3.2 Relative concentrations of CO ₂ , HCO ₃ ⁻ , and CO ₃ ²⁻ as a function of ocean pH.	51
3.3 Concentrations of CO ₂ , CH ₄ , and N ₂ O over the past 2,000 years.	53
3.4 Global carbon (CO ₂) budget for 2010–2019.	54
4.1 Evolution of the stratospheric aerosol loading after the eruption of Mt Pinatubo.	70
4.2 Photo of the Taj Mahal on a typical smoggy day.	78
4.3 Schematic diagram of a tandem differential mobility analyser.	80
4.4 Our micro orifice uniform deposition impactor in the field.	81
4.5 An Aerosol Sampling Program (ASP) sampler being checked by a technician.	82
4.6 The Ion Beam Laboratory of the Australian Nuclear Science and Technology Organization.	83
4.7 Composition of the ASP fingerprints.	84
4.8 Time series of the ASP fingerprints.	85
5.1 Vertical profiles of atmospheric pressure, density, and molecular mean free path.	93
5.2 Standard atmospheric temperature profile.	94
5.3 Schematic diagram to illustrate hydrostatic equilibrium.	95
5.4 Illustration of Charles' Law.	96
5.5 Vertical stability conditions.	100
5.6 Maxwell–Boltzmann distributions of molecular speeds.	103
6.1 Schematic representation of a liquid and vapour in equilibrium.	108
6.2 Saturation vapour pressure over liquid water as a function of temperature.	109
6.3 Stability conditions for a moist atmosphere.	112
6.4 Forced ascent curve.	113
6.5 Ship tracks observed by satellite.	115

7.1 Pressure gradient force.	121
7.2 Motion of an air parcel in the Northern Hemisphere under the pressure gradient and Coriolis forces.	122
7.3 Balance of forces in the boundary layer.	123
7.4 Development of a thermal circulation.	125
7.5 Sea and land breezes.	126
7.6 Simple circulation patterns on a slowly rotating and a non-rotating planet.	127
7.7 Global circulation of the Earth's atmosphere.	128
8.1 The Planck function for a range of absolute temperatures.	137
8.2 Schematic diagram of the inflow of solar radiation and the outflow of thermal radiation.	139
8.3 Normalised Planck function for 5,750 K and 255 K.	139
8.4 Schematic diagram of the Earth's energy budget.	141
8.5 Schematic diagram of the simple one-layer model.	144
8.6 Schematic diagram of the extended one-layer model.	145
8.7 Schematic diagram of the multilayer model.	146
9.1 The solar spectrum along with the Planck function for 5500 K and 6,000 K, for comparison.	150
9.2 Sunspot numbers since 1750.	151
9.3 An elliptical orbit.	152
10.1 Dobson spectrophotometer.	164
10.2 Ozone transmittance in the UV-B and UV-A.	168
10.3 Action spectra for DNA and erythema, plus the response function of the Robertson–Berger meter.	169
10.4 Ozone data for 4 October 2004.	171
11.1 Schematic illustration of a dipole moment.	180
11.2 Lorentz Line Profile for several values of the line width, α .	182
11.3 Vibrational modes of CO ₂ and H ₂ O.	183
11.4 Atmospheric transmission of radiation across the spectrum.	185
11.5 Spectral transmittance in the vicinity of a single Lorentz spectral line, for five values of uS .	187
12.1 Cimel radiometers at the calibration facility on Tenerife.	195
12.2 Lidar system of the Institute of Physics Belgrade.	197
12.3 Limb scan geometry.	199
12.4 Schematic weighting functions for (a) nadir viewing, and (b) limb viewing.	201
12.5 Nimbus-7, showing the arrangement of its instruments.	204
12.6 Aerosol optical depth for July 2012.	212
12.7 Net radiation for October 2010.	213
12.8 Chlorophyll for February 2014.	214
12.9 Vegetation for February 2014.	215
13.1 Major ocean surface currents.	221
13.2 The thermohaline circulation.	222
13.3 Walker circulation for neutral, El Niño, and La Niña conditions.	226

13.4	Time series of the Southern Oscillation Index.	227
13.5	Typical late autumn through early spring upper-level Jet Stream positions associated with moderate to strong La Niña and El Niño events.	228
13.6	Dipole Mode Index of the Indian Ocean Dipole.	230
13.7	SAM Index, including Trend Line.	231
13.8	The PDO index.	232
13.9	The IPO index.	233
13.10	NAO anomaly.	233
14.1	The climate system with its subsystems and interconnections.	239
14.2	Schematic diagram of a feedback process.	240
14.3	Iterative solution of the basic model.	248
15.1	Schematic diagram of a weather/climate model.	253
15.2	500 hPa height anomalies for the control (SAT) and no satellite (NOSAT) analyses.	257
15.3	Schematic diagram of a climate model.	260
15.4	The development of climate models from the 1970s to 2000.	261
15.5	World map showing the increased diversity of modelling centres contributing to CMIP and CORDEX.	264
15.6	Annual mean near-surface (2 m) air temperature (°C) for the period 1995–2014.	266
15.7	Evolution of global average surface temperature under the RCP3 and RCP8.5 scenarios.	267
16.1	Schematic diagram of temporal coverage of (a) selected instrumental climate observations, and (b) selected palaeoclimate archives.	273
16.2	The geological timescale.	274
16.3	Orbital parameters and proxy records over last 800 kyr.	280
16.4	Earth's orbit for two values of the eccentricity.	281
17.1	Concentrations of CO ₂ , CH ₄ , and N ₂ O since 1850.	294
17.2	Global mean atmospheric mixing ratios of select ozone-depleting substances and other greenhouse gases.	295
17.3	Aerosol evolution.	298
17.4	Net aerosol effective radiative forcing (ERF) from different lines of evidence.	300
17.5	Effective radiative forcing (ERF) from 1750 to 2019 by contributing forcing agents.	301
17.6	The contributions of forcing agents to 2019 temperature change relative to 1750.	302
17.7	Schematic representation of the global mean energy budget of the Earth.	303
17.8	Temporal evolution of effective radiative forcing (ERF) related to the drivers.	304
18.1	Earth's surface temperature history with key findings annotated.	313
18.2	Changes in assessed historical surface temperature changes since AR5.	314
18.3	Observed warming (1850–2019) is only reproduced in simulations including human influence.	315
18.4	Global, land, ocean, and continental annual mean near-surface air temperature anomalies in CMIP6 models and observations.	316

18.5	Changes in surface humidity.	317
18.6	Time series of global mean total column water vapour annual anomalies.	318
18.7	Changes in precipitation minus evaporation.	319
18.8	Cumulative Antarctic Ice Sheet and Greenland Ice Sheet mass changes.	322
18.9	Global energy inventory and sea-level budget.	325
18.10	Simulated and observed global mean sea-level change due to thermal expansion for CMIP6 models and observations.	326
18.11	Phenological indicators of change in growing season.	330
19.1	Probability per year of reaching a certain temperature versus temperature, for both the present climate and pre-industrial climate.	336
19.2	Time series of observed temperature anomalies.	337
19.3	Linear trends over 1960–2018 for three temperature extreme indices.	338
19.4	The difference in average temperature (based on 2000, 2001, 2002, and 2012) from 2003, covering the period from 20 July to 20 August, using MODIS data.	340
20.1	Selected indicators of global climate change from CMIP6 historical and scenario simulations.	359
20.2	Near-term change of seasonal mean surface temperature for two seasons and two scenarios.	361
20.3	Mid- and long-term change of annual mean surface temperature for two scenarios.	362
20.4	CMIP6 carbon uptake in historical and scenario simulations.	365
20.5	Global average surface ocean pH.	366
20.6	CMIP6 annual mean Atlantic Meridional Overturning Circulation strength change in historical and scenario simulations.	366

Tables

2.1 Atmospheric permanent gases.	page 22
2.2 Variable atmospheric gases.	23
2.3 WHO air quality goals and interim targets.	34
2.4 Air Quality Standards for the UK, EU, USA, and Australia.	35
2.5 Properties of selected radioisotopes.	37
2.6 Isotopes of hydrogen, carbon, nitrogen, and oxygen.	41
3.1 Carbon reservoirs in the Earth System.	46
3.2 Atmospheric methane budget.	49
3.3 Carbon dioxide sources and sinks.	55
3.4 Sector-by-sector sources of greenhouse gases.	56
3.5 Direct sources and sinks of NO _x and NH ₃ .	58
3.6 Sources and sinks of tropospheric N ₂ O.	59
3.7 Estimated rates of emission of sulphur to the atmosphere from natural sources.	59
4.1 Ion composition of sea water and river waters.	65
4.2 Major aerosol types and sources.	69
6.1 Terminal velocities of water droplets in still air at 1 atm and 20°C.	116
13.1 Some events associated with the 2015–16 extreme El Niño.	229
14.1 Assessed sign and confidence level of cloud feedbacks in different regimes.	242
16.1 Reference ranges of age, global mean surface temperature (GMST), atmospheric CO ₂ concentration, and global mean sea level (GMSL) for the palaeo periods discussed in this chapter.	278
17.1 Present-day mole fractions and effective radiative forcing for the well-mixed greenhouse gases.	295
17.2 Present-day effective radiative forcing (ERF) due to changes in aerosol–radiation interactions, radiation–cloud interactions, and total aerosol ERF.	299
18.1 Observed contributions to global mean sea-level change for two different periods.	324
20.1 Overview of scenarios used in AR6.	358
20.2 Model intercomparison projects (MIPs) used in AR6.	358
20.3 CMIP6 annual mean surface air temperature anomalies (°C).	360
20.4 CMIP6 precipitation anomalies (%) relative to averages over 1995–2014 for selected future periods, regions, and SSPs.	362
20.5 CMIP6 Arctic sea-ice area for selected months, time periods, and five SSPs.	363
