UNIVERSITY PRESS

Contents

<i>Preface</i>	<i>page xv</i>
<i>Acknowledgments</i>	<i>xvii</i>
1 Overview and Motivation	1
1.1 From Mechanisms to Computation	4
1.2 Historical Context	5
1.3 Biological Inspiration	11
1.4 Operational Regimes	11
1.5 Operational Modes	12
1.6 Software Support	13
1.7 A Brief Guide to This Book	13
1.8 Further Reading	14
1.9 Problems	14
2 Fundamental Problems	16
2.1 Defining a Point Robot	17
2.2 Path Planning for a Point Robot	17
2.3 Localization for a Point Robot	20
2.4 Sensing for a Point Robot	21
2.5 Mapping for a Point Robot	23
2.6 SLAM for a Point Robot	24
2.7 Looking Forward	25
2.8 Further Reading	25
2.9 Problems	25
Part One Locomotion and Perception	29
3 Mobile Robot Hardware	31
3.1 Locomotion	31
3.1.1 Batteries	32
3.1.2 Motors	33
3.1.3 Servo Motor Control	35
3.1.4 Gears	36
3.1.5 Wheeled Mobile Robots	36
3.1.6 Complex Wheels	47

3.1.7	Tracked	48
3.1.8	Limbed	48
3.1.9	Rigid-Vehicle Dynamics	61
3.1.10	Soft-Vehicle Structure	64
3.1.11	Aquatic Robots	64
3.1.12	Flying Robots	67
3.1.13	Space Robots	70
3.1.14	Locomotion in ROS	71
3.1.15	Biological Locomotion	72
3.2	Off-Board Communication	73
3.2.1	Tethered	73
3.2.2	Untethered	73
3.3	Processing	75
3.4	Further Reading	76
3.5	Problems	77
4	Non-Visual Sensors and Algorithms	82
4.1	Basic Concepts	82
4.2	Contact Sensors: Bumpers	86
4.3	Inertial Sensors	88
4.3.1	Accelerometers	88
4.3.2	Gyroscopes	88
4.3.3	Compasses and Inclinometers	90
4.4	Sonar	91
4.5	Radar	92
4.6	Laser Rangefinders	94
4.7	UWB	97
4.8	Satellite-Based Positioning	97
4.9	Data Fusion	99
4.9.1	Kalman Filter	99
4.9.2	Markov Localization	109
4.9.3	Discrete-Grid Representation	111
4.9.4	Monte Carlo Techniques	111
4.9.5	Gaussian Mixtures	114
4.9.6	Graph-Based Approaches	115
4.10	Biological Sensing	115
4.10.1	Magnetic Sensing	116
4.10.2	Odor	116
4.10.3	Sound and Vibrations	117
4.10.4	Electrical Fields	117
4.10.5	Infrared	117
4.10.6	Inertial Measurement	117
4.11	Further Reading	117
4.12	Problems	118

5	Visual Sensors and Algorithms	120
5.1	Visual Sensors	121
5.1.1	Perspective Cameras	121
5.1.2	Planar Homography	123
5.1.3	Camera Calibration	125
5.1.4	Cameras in ROS	126
5.2	Object Appearance and Shading	128
5.3	Signals and Sampling	129
5.4	Image Features and Their Combination	131
5.4.1	Color and Shading	132
5.4.2	Image Brightness Constraint	132
5.4.3	Correlation	134
5.4.4	Fourier Methods	135
5.4.5	Feature Detectors	135
5.4.6	Visual Targets	137
5.4.7	Edges	138
5.4.8	Image Filters	145
5.4.9	Local Phase Differences	145
5.4.10	Summary	145
5.5	Obtaining Depth	146
5.5.1	Ground Plane Assumption	146
5.5.2	Multiple Cameras	146
5.5.3	Model-Based Vision	148
5.5.4	Egomotion	148
5.5.5	Depth from a Single Camera	150
5.6	Active Vision	150
5.6.1	Foveated Sensors	150
5.6.2	Stereo Heads	151
5.7	Other Sensors	153
5.7.1	RGB-D Cameras	153
5.7.2	Light Striping	153
5.7.3	Structured and Unstructured Light	154
5.7.4	Omnidirectional Sensors	154
5.8	Biological Vision	155
5.9	Further Reading	156
5.10	Problems	156
Part Two	Representation and Planning	159
6	Learning for Robots	161
6.1	Learning-Based Methods	161
6.2	Deep Learning Networks	161
6.3	Basic Neural Network Structure	162
6.3.1	The Perceptron	162
6.3.2	Following a Line with a DNN	166
6.4	Convolutional Neural Networks	168

6.4.1	Road Following with a CNN	169
6.5	Other Topical Architectures	171
6.6	Learning Control	172
6.7	Training Regimes	172
6.8	Representing Output Features	173
6.9	Reinforcement Learning	173
6.9.1	Q-learning	176
6.9.2	Deep Q-Learning	178
6.10	Using Large Language Models in Robotics	178
6.11	Further Reading	180
6.12	Problems	181
7	Planning in, Representing and Reasoning about Space	185
7.1	Representing the Robot	185
7.1.1	Configuration Space	185
7.1.2	Simplifications	188
7.2	Representing Space	189
7.2.1	Spatial Decomposition	190
7.2.2	Geometric Representations	194
7.2.3	Topological Representations	197
7.3	Path Planning for Mobile Robots	198
7.3.1	Constructing a Discrete Search Space	200
7.3.2	Retraction Methods	202
7.3.3	Searching a Discrete State space	204
7.3.4	Spatial Uncertainty	217
7.3.5	Complex Environments	218
7.4	Planning for Multiple Robots	224
7.5	Biological Mapping	225
7.6	Further Reading	225
7.7	Problems	226
8	System Control	229
8.1	Horizontal Decomposition	230
8.1.1	Hierarchical Control	232
8.1.2	Blackboard Systems	233
8.2	Vertical Decomposition	234
8.2.1	Subsumption	236
8.2.2	Motor Schema	237
8.2.3	Continuous Control	238
8.2.4	Behavior-Based Systems	238
8.3	Integrating Reactive Behaviors	239
8.4	Finite State Machine	239
8.5	Behavior Trees	240
8.6	High-Level Control	242
8.6.1	STRIPS	243
8.6.2	Situation Calculus	244

8.6.3	GRAMMPS	244
8.6.4	Other High-Level Control Approaches	244
8.7	Alternative Control Formalisms	245
8.7.1	Artificial Neural Networks	245
8.7.2	Fuzzy Logic	246
8.7.3	Genetic Algorithms	248
8.8	End-to-End Learning	249
8.9	Further Reading	249
8.10	Problems	250
9	Pose Maintenance and Localization	252
9.1	Simple Landmark Measurement	254
9.1.1	Landmark Classes	254
9.1.2	Triangulation and Trilateration	255
9.2	Fingerprinting	260
9.3	Servo Control	260
9.4	Recursive Filtering	262
9.5	Localization in ROS	263
9.6	Non-Geometric Methods: Perceptual Structure	263
9.6.1	Eigenlandmarks	265
9.7	Correlation-Based Localization	269
9.8	Global Localization	269
9.8.1	A Performance Guarantee for Strategy MDL	272
9.8.2	Practical One-Shot Global Localization	274
9.9	Biological Approaches to Localization	275
9.10	Further Reading	275
9.11	Problems	276
10	Mapping and Related Tasks	278
10.1	Sensorial Maps	280
10.2	Geometric Maps	281
10.2.1	Mapping without Localization	283
10.2.2	Simultaneous Localization and Mapping	285
10.2.3	Loop Closing	288
10.2.4	Factor Graphs and GTSAM	289
10.3	Topological Maps	289
10.3.1	Marker-Based Exploration	290
10.4	Exploration	293
10.4.1	Spiral Search	294
10.5	Further Reading	296
10.6	Problems	296
Part Three	Advanced Topics and the Future of Mobile Robotics	299
11	Robot Collectives	301
11.1	Categorizing Collectives	302

11.2	Control Architectures, Their assumptions and Limitations	303
11.3	Collective Communication	307
11.4	Distributed Sensing	308
11.5	Distributed Planning	309
11.6	Formation Control	310
11.7	Localization and State Estimation	311
11.8	Mapping	312
11.8.1	Rendezvous	313
11.8.2	Exploration	313
11.8.3	Map Fusion	313
11.9	Further Reading	314
11.10	Problems	314
12	Human-Robot Interaction	316
12.1	Introduction	316
12.2	Level and Nature of the Autonomy	317
12.3	Nature of the Information Exchange	317
12.3.1	Communications Medium	317
12.3.2	What to Communicate	324
12.4	Structure of the Team	326
12.5	Adaptation, Learning, and Training	326
12.6	Shape of the Task	326
12.7	Social Robots	327
12.8	Evaluating HRI Approaches	327
12.9	Further Reading	330
12.10	Problems	331
13	Robot Ethics	333
13.1	Introduction	333
13.2	Robot as Tool	334
13.2.1	Military Robots	335
13.2.2	Robots, Children, and the Elderly	337
13.2.3	Autonomous Vehicles	338
13.3	Robot as Subject	339
13.4	Robot as Agent	339
13.5	Further Reading	340
13.6	Problems	340
14	Robots in Practice	342
14.1	Material Transport	342
14.2	Intelligent Vehicles	344
14.2.1	Driving Assistants	345
14.2.2	Convoy Systems	345
14.2.3	Autonomous Driving Systems	346
14.2.4	Automated Highway Systems	348
14.2.5	Autonomous Urban Systems	348

14.3	Robots for Survey and Inspection	349
14.4	Mining Automation	350
14.5	Space Robotics	351
14.6	Autonomous Aircraft	353
14.7	Bomb/Mine Disposal	353
14.8	Underwater Inspection	355
14.9	Agriculture/Forestry	356
14.10	Aids for the Disabled	357
14.11	Entertainment	357
14.12	Domestic and Commercial Cleaning Robots	358
14.13	Further Reading	359
14.14	Problems	359
15	The Future of Mobile Robotics	361
15.1	Locomotion	361
15.2	Sensing	362
15.3	Control	363
15.4	HRI	364
15.5	Future Directions	364
Appendix A	Fictional Robots	365
A.1	Autonomous Robots in Literature	365
A.2	Autonomous Robots in Film	366
Appendix B	Probability and Statistics	370
B.1	Probability	370
B.1.1	Probability of Discrete Events	370
B.1.2	Probability of Continuous Events	372
B.1.3	Probability Distributions	373
B.2	Some Simple Statistics	373
B.3	Further Reading	374
B.4	Problems	374
Appendix C	Linear Systems, Matrices, and Filtering	376
C.1	Linear Algebra	376
C.2	Matrix Algebra	377
C.3	Signals and Systems	378
C.4	Fourier Theory	379
C.5	Sampling and the Nyquist Frequency	380
C.6	Further Reading	380
C.7	Problems	380
Appendix D	Markov Models	381
D.1	Discrete Markov Process	381
D.2	Hidden Markov Models	383
D.3	Markov Decision Process	384

D.4	POMDP	385
D.5	Further Reading	386
D.6	Problems	386
	<i>Bibliography</i>	387
	<i>Index</i>	421
