CONTENTS

About the Authors xix

Preface xxi

PART I

Foundations of Evolutionary Biology

CHAPTER 1 An Overview of Evolutionary Biology 3

- 1.1 A Brief Introduction to Evolution, Natural Selection, and Phylogenetics 4
 - Evolutionary Change and the Food We Eat 6
 - Evolutionary Change and Pharmaceuticals 9
 - Phylogenetic Trees as Hypotheses 12
- 1.2 Approaches to the Study of Evolution 16
 - Molecular Genetics and Evolution in Chimps and Humans 18
 - Evolution in the Anthropocene 21
 - Summary 24
 - Key Terms 24
 - Review Questions 24
 - Key Concept Application Questions 24
 - Suggested Readings 25

CHAPTER 2 Early Evolutionary Ideas and Darwin's Insight 27

- 2.1 The Nature of Science: Natural versus Supernatural Explanations 29
 - Methodological Naturalism 29
 - Hypothesis Testing and Logic 30
- 2.2 Time and a Changing World 30
- 2.3 The Origins and Diversity of Life 33
- 2.4 Organisms Are Well Suited to Their Environments 34
 - Paley's Natural Theology 34
 - Jean-Baptiste Lamarck and the Inheritance of Acquired Characteristics 35
 - Patrick Matthew and Natural Selection 36
- 2.5 Darwin's Theory 37
 - Darwin's Two Fundamental Insights 38

	Publication of <i>On the Origin of Species</i>	38
	Means of Modification: Pigeon Breeding and Domesticated Foxes	40
	Artificial Selection	41
	Domestication	42
	Changing Species	44
2.6	Darwin on Natural Selection	45
	Darwin, Variation, and Examples of Natural Selection	45
	The Power of Natural Selection	46
	Malthus and the Scope of Selection	47
	Transformational and Variational Processes of Evolution	48
2.7	Darwin on Common Ancestry	49
	The Tree of Life	49
	Groups within Groups	51
	Common Descent and Biogeography	52
2.8	Problems with Darwin's Theory	53
	Problem 1: Accounting for Complex Structures with Multiple Intricate Parts	53
	Problem 2: Explaining Traits and Organs of Seemingly Little Importance	54
	Problem 3: Why Does Variation Persist in the Face of Natural Selection?	54
2.9	The Reaction to Darwin and Early History of the Modern Synthesis	55
	Summary	58
	Key Terms	58
	Review Questions	58
	Key Concept Application Questions	59
	Suggested Readings	59

CHAPTER 3 Natural Selection

61

3.1	The Components of Natural Selection	63
	Natural Selection and Coat Color in the Oldfield Mouse	66
3.2	Adaptations	72
	Adaptations and Fit to Environment	73
3.3	Natural Selection in the Field	74
	Predation and Natural Selection in Guppies	74
	Natural Selection on Lizards in Urban Heat Islands	77
3.4	Natural Selection in the Laboratory	78
	<i>E. coli</i> : Long-Term Evolution Experiment	79
3.5	Origin of Complex Traits	83
	Intermediate Stages with Function Similar to Modern Function	83
	Novel Structures and Exaptations	84
	Novelty at the Molecular Level	91
3.6	Constraints on What Natural Selection Can Achieve	93
	Physical Constraints	94
	Evolutionary Arms Races	98
	Natural Selection Lacks Foresight	98
	Summary	100
	Key Terms	100
	Review Questions	100
	Key Concept Application Questions	101
	Suggested Readings	101

CHAPTER 4 Phylogeny and Evolutionary History 103

- 4.1 Phylogenies Reflect Evolutionary History 105**
 - BOX 4.1** What Is the Difference between a Pedigree and a Phylogeny? 108
- 4.2 Reading Phylogenetic Trees 110**
 - Clades and Monophyletic Groups 113
 - Rooted Trees and Unrooted Trees 117
 - Branch Lengths 118
- 4.3 Traits on Trees 121**
- 4.4 Using Phylogenies to Generate and Test Evolutionary Hypotheses 128**
 - The Evolution of Venom 128
 - Using Phylogenies to Predict Where New Pharmaceuticals Will Be Found 130
 - Vestigial Traits 130
 - Summary 134
 - Key Terms 134
 - Review Questions 135
 - Key Concept Application Questions 136
 - Suggested Readings 139

CHAPTER 5 Inferring Phylogeny 141

- 5.1 Building Trees 143**
 - Synapomorphies, Homoplasies, and Symplesiomorphies 144
 - Approaches to Phylogenetic Reconstruction 147
- 5.2 Parsimony 148**
 - BOX 5.1** The Fitch Algorithm 152
- 5.3 Distance Methods 154**
 - Measuring Distances between Species or Populations 154
 - BOX 5.2** Sequence Alignment 155
- 5.4 Maximum Likelihood and Bayesian Methods 158**
 - Models of Sequence Change 158
 - Bayesian Analysis of SARS-CoV-2 Spread in Europe 159
- 5.5 Rooting Trees 161**
- 5.6 How Many Different Trees Are There? 164**
- 5.7 Phylogenies and Statistical Confidence 166**
 - Bootstrap Resampling 166
 - Odds Ratio Testing 168
 - Testing Hypotheses about Phylogenetic Structure 168
- 5.8 Fossil Evidence of Evolutionary History 171**
 - The Fossil Record 171
- 5.9 Phylogeny, Natural Selection, and the Comparative Method 173**
 - Independent Contrasts: Tail Length and Aboreality among Snakes 176
 - Summary 178
 - Key Terms 179
 - Review Questions 179
 - Key Concept Application Questions 179
 - Suggested Readings 180

PART II

Evolutionary Genetics

CHAPTER 6 Transmission Genetics and the Sources of Genetic Variation 183

6.1 Mendel's Laws 185

 The Law of Segregation 186

 The Law of Independent Assortment 186

 Blending versus Particulate Inheritance 187

6.2 Transmission Genetics 189

 DNA and Chromosomes 189

 From DNA to Proteins 190

 Alleles and Genotypes 193

 Regulatory Elements 194

 Epigenetic Inheritance 194

6.3 Variation and Mutation 196

 Genetic Variability and Mutation 196

 Genetic Variability and Recombination 201

6.4 Mutation Rates and Fitness Consequences 202

 Rates of Mutation 205

 Distribution of Fitness Effects of Mutation 206

 Summary 210

 Key Terms 211

 Review Questions 211

 Key Concept Application Questions 212

 Suggested Readings 212

CHAPTER 7 The Genetics of Populations 215

7.1 Individual-Level versus Population-Level Thinking 218

 BOX 7.1 Types of Equilibria 219

7.2 The Hardy–Weinberg Model: A Null Model for Population Genetics 220

 The Role of Null Models in Science 220

 The Hardy–Weinberg Model 220

 The Hardy–Weinberg Assumptions 221

 Deriving the Hardy–Weinberg Model 221

 BOX 7.2 Basic Probability Calculations 222

 An Example of Hardy–Weinberg Genotype Frequencies: The Myoglobin Protein 224

 BOX 7.3 Hardy–Weinberg Equilibrium Is a Mixed Equilibrium 225

 BOX 7.4 Testing for Hardy–Weinberg Equilibrium 227

7.3 Natural Selection 228

 Selection for Coat Color in Pocket Mice 228

 A Simple Model of Natural Selection 229

 BOX 7.5 Natural Selection Favoring a Dominant Allele 230

 Modes of Frequency-Independent Selection 231

 Modes of Frequency-Dependent Selection 234

BOX 7.6	Equilibrium Allele Frequencies in Overdominance and Underdominance	235
	Viability Selection versus Fecundity Selection	238
7.4	Mutation	240
	Mutation Can Change Allele Frequencies in a Population	240
BOX 7.7	A Population Genetic Model of Mutation	241
	Mutation–Selection Balance	241
BOX 7.8	Mutation–Selection Balance for a Deleterious Recessive Allele	242
7.5	Nonrandom Mating	244
	Inbreeding	245
	Inbreeding Depression	247
BOX 7.9	Wright's F -statistic	248
	Disassortative Mating	249
7.6	Migration	250
	Migration–Selection Balance	251
7.7	Consequences on Variation within and between Populations	253
	Summary	254
	Key Terms	255
	Review Questions	255
	Key Concept Application Questions	256
	Suggested Readings	257

CHAPTER 8 Evolution in Finite Populations 259

8.1	Random Change and Genetic Drift	261
BOX 8.1	The Wright–Fisher Model	262
	Genetic Drift Causes Allele Frequencies to Fluctuate over Time	263
	Genetic Drift Causes Heterozygosity to Decrease within a Population over Time	264
BOX 8.2	Quantifying the Effects of Genetic Drift on Variation	266
BOX 8.3	Effective Population Size	268
	Genetic Drift Causes Divergence between Populations over Time	270
8.2	Demography, Biogeography, and Drift	273
	Population Bottlenecks	273
	Founder Effect	277
8.3	The Neutral Theory of Molecular Evolution	281
	The Ubiquity of Molecular Variation	281
	The Neutral Theory Proposes That Most Substitutions Are Selectively Neutral	282
	Reasons for Selective Neutrality	283
	Neutral Theory as a Null Model	285
	Ratio of Nonsynonymous to Synonymous Changes	286
	Comparing Variation within a Population to Divergence between Populations	289
	Fixation Probability and Substitution Rate for Neutral Alleles	291
	The Molecular Clock Concept	292
	Generation Time and the Rate of Neutral Substitution	295
8.4	The Interplay of Drift, Mutation, and Natural Selection	297
	The Mathematics of Selection and Drift	297
BOX 8.4	Wright's F -statistic at a Neutral Locus with Mutation	298
8.5	Coalescent Theory and the Genealogy of Genes	300
	From Species Trees to Gene Trees	300
	Dynamics of the Coalescent Process	301
BOX 8.5	A Mathematical Treatment of the Coalescent Process	302
	Bugs in a Box	303
	The Coalescent Process and Genetic Variation	304

Summary	307
Key Terms	307
Review Questions	307
Key Concept Application Questions	308
Suggested Readings	309

CHAPTER 9 Evolution at Multiple Loci

311

9.1 Polygenic Traits and the Nature of Heredity	313
Continuous versus Discontinuous Variation	313
Polygenic Traits Can Exhibit Nearly Continuous Variation	313
The Importance of Latent Variation	314
BOX 9.1 A Numerical Example of How Selection and Reassortment Can Generate New Phenotypes	316
Gene Interactions	317
9.2 Population Genetics of Multiple Loci	318
Allele Frequencies and Haplotype Frequencies	318
Hardy–Weinberg Proportions for Two Loci	319
Statistical Associations between Loci	321
Quantifying Linkage Disequilibrium	322
Evolutionary Processes Create Linkage Disequilibrium	323
Recombination Breaks Down Linkage Disequilibrium	326
BOX 9.2 How the Coefficient of Linkage Disequilibrium Changes over Time in the Hardy–Weinberg Model	328
Selective Consequences of Genetic Linkage	329
Sources of Evolutionary Contingency	340
9.3 Adaptive Landscapes	341
Phenotype Space	342
Adaptive Landscapes in Phenotype Space	342
Adaptive Landscapes in Genotype Space	345
9.4 Quantitative Genetics	347
The Phenotypic Value of Continuous Traits	348
Decomposing Genotypic Effects	350
BOX 9.3 Additive, Dominance, and Epistatic Effects	351
The Selection Differential and the Response to Selection	354
Quantitative Genetic Analysis of an Artificial Selection Study	356
BOX 9.4 Mapping Quantitative Trait Loci	358
Quantitative Genetic Analysis of Natural Selection in the Wild	360
Summary	361
Key Terms	362
Review Questions	362
Key Concept Application Questions	363
Suggested Readings	363

CHAPTER 10 Genome Evolution

365

10.1 Whole-Genome Sequencing	367
10.2 Resolving the Paradoxes of Genome Size	368
The G-Value Paradox	370
10.3 Content and Structure of Viral Genomes	371
10.4 Content and Structure of Bacterial and Archaeal Genomes	374

Horizontal Gene Transfer and Prokaryote Genomes 377
 Codon Usage Bias 381
 GC Content 383

10.5 Content and Structure of Eukaryotic Nuclear Genomes 385

Transposable Elements 386
 Origins of Replication, Centromeres, and Telomeres 389
 Introns 392
 Recombination across the Genome 394

Summary 396

Key Terms 396

Review Questions 397

Key Concept Application Questions 397

Suggested Readings 398

PART III

The History of Life

CHAPTER 11 The Origin and Evolution of Early Life 401

11.1 What Is Life? 403

11.2 The Origin and Evolution of the Building Blocks of Life 404

Small Molecules to Amino Acids, Lipids, and Nucleotides 407
 Lipids to Vesicles, Nucleic Acids to RNA, and Amino Acids to Proteins 409

11.3 The Evolution of Protocells and Cells 410

Lipid Membranes and Reproduction in Early Cells 411
 Hypercycles 412

11.4 The RNA World 415

Experimental Evidence on the Origins of Natural Selection 416

11.5 Genetic Information and Genetic Exchange 419

From RNA to DNA 419

BOX 11.1 Where Did Viruses Come From? 421

Horizontal Gene Transfer 422

11.6 Metabolic Networks, Minimal Gene Sets, and Cell Evolution 424

Summary 427

Key Terms 428

Review Questions 428

Key Concept Application Questions 429

Suggested Readings 429

CHAPTER 12 Major Transitions 431

12.1 Overview of Major Transitions 434

Explaining Major Transitions 436

12.2 Major Transition: The Evolution of the Eukaryotic Cell 437

Endosymbiosis and the Evolution of Eukaryotic Organelles 438

Three Domains or Two? 441

Endosymbiosis and the Evolution of the Eukaryotic Nucleus 444

12.3	Major Transition: The Evolution of Multicellularity	445
	Staying Together: Yeast and Multicellularity	446
	Coming Together: Slime Molds and Multicellularity	448
12.4	Major Transition: The Evolution of Individuality	451
	Volvocine Algae and the Evolution of Individuality	452
12.5	Major Transition: Solitary to Group Living	454
	The Benefits to Group Living	455
	The Costs of Group Living	457
	Parasite Transmission as a Cost of Increased Group Size	457
	Summary	460
	Key Terms	460
	Review Questions	460
	Key Concept Application Questions	461
	Suggested Readings	461

CHAPTER 13 Evolution and Development

463

13.1	Evo–Devo: A Brief History	464
	Timing of Development	465
13.2	Regulation, Expression, and Switches	467
	Homeotic Genes, Development, and Evolution	467
	Homeobox, Colinearity, and Deep Homology	470
	Regulatory Enhancers as Switches	473
	Regulatory Enhancers and Threespine Stickleback Morphology	475
	Regulatory Enhancers and Insect Color and Pattern	477
13.3	Evo–Devo and Gene Duplication	480
13.4	Evo–Devo and Neural Crest Cells	482
	Summary	485
	Key Terms	486
	Review Questions	486
	Key Concept Application Questions	486
	Suggested Readings	487

CHAPTER 14 Species and Speciation

489

14.1	The Species Problem	491
	What Is a Species?	491
	Identifying Species	492
14.2	Modes of Speciation	498
	Allopatric Speciation	498
	Parapatric Speciation	502
	Sympatric Speciation	505
14.3	Reproductive Isolating Mechanisms and the Genetics of Speciation	509
	BOX 14.1 Secondary Contact	510
	Reproductive Isolating Mechanisms: Isolation through Pollinators	511
	Reproductive Isolating Mechanisms: Isolation through Sexual Imprinting	514
	Reproductive Isolation via the Hologenome	516
	The Genetics of Reproductive Isolation	517

- 14.4 Adaptive Radiations 523
 - Summary 525
 - Key Terms 526
 - Review Questions 526
 - Key Concept Application Questions 526
 - Suggested Readings 527

CHAPTER 15 Extinction and Evolutionary Trends 529

- 15.1 The Concept of Extinction 533
 - Extinction and Phylogenetic History 534
 - Extinctions and the Fossil Record 534
 - Magnitude of Extinction: Background Extinction versus Mass Extinction 540
- 15.2 Background Extinction 541
 - Extinction and Predation 542
 - Predation, Extinction, and Indirect Effects 542
 - Extinction and Competition 543
 - Extinction and Disease 545
 - Multiple Causes of Background Extinction 547
- 15.3 Mass Extinction 548
 - The Cretaceous–Paleogene (K–Pg) Mass Extinction 549
 - BOX 15.1** Is An Anthropogenic Mass Extinction Underway? 550
 - The Permian Mass Extinction 556
 - Damage in the Sea 557
 - Does Mass Extinction Open the Door for Adaptive Radiation? 560
- 15.4 Factors Correlated with Extinction 560
 - Species' Longevity and Extinction Probability 561
 - Species' Geographic Range and Extinction Probability 562
- 15.5 Rates of Evolutionary Change and Evolutionary Trends 563
 - Rates and Patterns of Evolutionary Change 563
 - Evolutionary Trends 566
 - Summary 570
 - Key Terms 571
 - Review Questions 571
 - Key Concept Application Questions 571
 - Suggested Readings 572

PART IV

Evolutionary Interactions

CHAPTER 16 Sex and Sexual Selection 575

- 16.1 Asexual and Sexual Reproduction 579
 - Asexual Reproduction 579
 - Sexual Reproduction 580

	Distinguishing between Sexual and Asexual Reproduction	581
	A Phylogenetic Overview of Sexual and Asexual Reproduction	582
16.2	The Costs of Sexual Reproduction	584
	The Twofold Cost of Sex	584
	Sex Can Break Up Favorable Gene Combinations	586
	Other Costs of Sex	586
16.3	The Benefits of Sexual Reproduction	587
	Sex Purges Deleterious Mutations	587
	Sex Accelerates Adaptive Evolution: The Fisher–Muller Hypothesis	589
	Sex and the Red Queen	591
	Sex, Environmental Unpredictability, and Variation among Offspring	593
16.4	Sexual Reproduction Leads to Sexual Selection	595
	Why Is There an Even Sex Ratio?	595
	BOX 16.1 The Evolution of Anisogamy	595
	Testing the Sex Ratio Model—A Rapid Change of Sex Ratio	597
	BOX 16.2 Natural Selection Operates on Sex Ratio	597
	Selection Operates Differently on Males and Females	600
	BOX 16.3 Sexual Selection in Plants	601
	BOX 16.4 Light Pollution and Courtship in Fireflies	603
16.5	Intersexual Selection	604
	Direct Benefits	604
	Good Genes and Costly Signals	604
	Fisherian Sexual Selection	608
	The Sensory Bias Hypothesis	610
16.6	Intrasexual Selection and Sexual Conflict	612
	Male–Male Competition by Cuckoldry in Bluegill Reproductive Morphs	612
	Sexual Conflict	613
	Summary	615
	Key Terms	616
	Review Questions	616
	Key Concept Application Questions	616
	Suggested Readings	617

CHAPTER 17 The Evolution of Sociality

619

17.1	Cooperation	622
	Path 1: Kinship and Cooperation	622
	Path 2: Reciprocity	632
	Path 3: Group Selection	634
17.2	Conflict	638
	Conflict among Nonkin	638
	BOX 17.1 Evolutionarily Stable Strategies	640
	Conflict over Parental Investment	640
	BOX 17.2 The Mixed Nash Equilibria for the Hawk–Dove Game	641
	Parent–Offspring Conflict	643
	Conflict within the Genome	644
17.3	Information and Communication	649
	Honest Signaling	650
	Conventional Signals	654
	Summary	657

Key Terms 658
Review Questions 658
Key Concept Application Questions 658
Suggested Readings 659

CHAPTER 18 Coevolution

661

- 18.1 Types of Coevolution 664
- 18.2 Coevolution and Mutualism 668
 - The Origin of Mutualism 668
 - Ant–Fungus Mutualisms 669
 - Ants and Butterflies: Mutualism with Communication 672
 - Communication in a Bat–Pitcher Plant Mutualism 674
 - Mutualism and the Response to Cheaters 675
 - Mutualism and Cospeciation 676
- 18.3 Antagonistic Coevolution 677
 - Predator–Prey Coevolution 677
 - Host–Parasite Coevolution and Cospeciation 679
 - Mimicry and Coevolution 682
- 18.4 Mosaic Coevolution 685
- 18.5 Gene–Culture Coevolution 687
 - Gene–Culture Coevolution in Darwin's Finches 688
 - Gene–Culture Coevolution and Lactose Tolerance in Humans 690
 - Summary 692
 - Key Terms 692
 - Review Questions 692
 - Key Concept Application Questions 693
 - Suggested Readings 693

CHAPTER 19 Human Evolution

695

- 19.1 Evolutionary Relationships among the Great Apes 698
- 19.2 The Hominin Clade 701
 - The First Hominins 705
 - The Archaic Hominins 706
 - The Genus *Homo* 707
- 19.3 The Emergence of Anatomically Modern Humans 711
 - Models for the Evolution of Modern Humans 712
 - Evidence for the Out-of-Africa Model 713
 - From *Homo heidelbergensis* to Modern Humans 714
- 19.4 Interbreeding among Modern Humans, Neanderthals, and Denisovans 717
 - Interbreeding with Neanderthals 717
 - Gene Flow from Denisovans 719
 - A New View of Hominin Evolution 719
- 19.5 Migration of Modern Humans 720
 - Gene Trees for Modern Human Populations 721
 - Multilocus Studies of Population History 723
 - BOX 19.1** Host–Pathogen Coevolution Reflects the History of Human Migrations 728

Summary 731
Key Terms 732
Review Questions 732
Key Concept Application Questions 732
Suggested Readings 733

CHAPTER 20 Evolution and Medicine **735**

20.1 Fever 738
Consequences of Fever 739
The Smoke Detector Principle 740

20.2 Vulnerability to Disease 741
Levels of Explanation 741
Six Explanations for Vulnerability to Disease 742

20.3 Coevolutionary Arms Races between Pathogens and Hosts 744
Immune Strategies 745
Evolution of Pathogens to Subvert Immune Systems 750
Effects of Immune Systems on Pathogens 751

20.4 The Evolution of Virulence 752
Myxoma Virus 753
The Trade-off Model of Virulence Evolution 754
The Short-Sighted Evolution Model 756

20.5 Phylogenetic Constraint and Vulnerability to Choking 757

20.6 Senescence 760
Vulnerability to Senescence 761
Rate-of-Living Hypothesis for Senescence 762
An Evolutionary View of Senescence 764
BOX 20.1 Do We Expect All of the Body's Systems to Break Down at Once? 770
Summary 775
Key Terms 776
Review Questions 776
Key Concept Application Questions 776
Suggested Readings 778
