

Cortical Evolution in Primates

*What Primates Are, What Primates Were,
and Why the Cortex Changed*

PART I. WHAT PRIMATES ARE

1. Topics tackled	3
Overview	3
Why?	3
What?	4
When?	8
Why now?	8
Why not?	10
Why not now?	11
Why try?	12
Chapter summary	12
References	13
2. Compact cladistics	16
Overview	16
Introduction	16
Taxing terminology	17
Homology, homoplasy, and analogy	20
Trees and scales	26
Old and new areas	27
Chapter summary	29
References	29
3. Present primates	31
Overview	31
Introduction	31
Taxing taxonomy	32
Principal primate clades	33
Strepsirrhines	39
Haplorhines	40
Catarrhines	42
Chapter summary	43
To “the” or not to “the”	43
References	44

PART II. WHAT PRIMATES WERE

4. Prolog to paleontology	49
Overview	49
Introduction	49
The dating scene	50
Bodies from bones	55
Focus on forests	57
Chapter summary	60
References	61
5. Arboreal adaptations	63
Overview	63
Introduction	63
Primates true and stem	64
Into the trees	67
Chapter summary	74
Cortical considerations	74
References	75
6. Primate paleoecology	78
Overview	78
Introduction	78
Paleocene plesiadapiforms	79
Eocene Euprimates	83
Oligocene openings and Miocene monkeys	87
Miocene modifications and Plio-Pleistocene primates	96
Chapter summary	101
References	102

PART III. WHAT PRIMATE CORTEX WAS

7. Great grades of gray	109
Overview	109
Introduction	109
Measures and misconceptions	110
Grades and clades	113
Eocene expansions	116
Chapter summary	120
References	122
8. Greater grades of gray	124
Overview	124
Introduction	124
Miocene monkeys and apes	125
Plio-Pleistocene hominins	136
Body or brain?	143
Chapter summary	144
References	145
9. Tempo and temperature	149
Overview	149
Introduction	149

Time travel	150
Cooling and crisis	152
Corticalization and speciation	156
Cortex and corpus	157
Chapter summary	158
References	159
10. Other orders	160
Overview	160
Introduction	160
Pride of place	161
The origin of mammals	161
Brain expansion	165
Chapter summary	172
Parietofrontia	173
References	174
 PART IV. WHAT PRIMATE CORTEX IS	
11. Cortical comparisons	179
Overview	179
Introduction	179
A Declaration of Independence	180
Flying primates, feathered apes	181
Crucial comparisons	182
Misconceptions: minor and massive	185
Chapter summary	199
References	200
12. Suites of specializations	205
Overview	205
Introduction	205
From tip to toe	206
Suite success	211
Chapter summary	222
References	223
13. Anthropoid adaptations	228
Overview	228
Introduction	228
The big chill	229
Frontal-field phylogeny	231
Changes at the top	240
Sights and sounds on the side	243
Guilt by association	244
Chapter summary	246
References	248
14. Human hemispheres	251
Overview	251
Introduction	251
Whole hemispheres	252
Area analysis	253

xvi Contents

Sensational size	255
Temporal tracts	264
Allocortical alterations	265
Cortex and chromosomes	267
Chapter summary	271
References	272

PART V. WHY THE CORTEX CHANGED

15. Eocene expansions	281
Overview	281
Introduction	281
What's new is old	281
The cortex complete	282
Eocene enlargements	289
Chapter summary	297
References	297
16. Anthropoid augmentations	300
Overview	300
Introduction	300
Groups, grub, and gray matter	302
Statistics and significance	305
Climate and cortex	306
Principal proposal	308
Chapter summary	313
References	314
17. Pleistocene prizes	317
Overview	317
Introduction	317
Suggestions for selection	318
Self and social systems	324
Chapter summary	332
References	333
18. Corticalization and composition	336
Overview	336
Introduction	337
Cortical chauvinism	337
Parts and primates	338
Questions and conclusions	339
Instead of intelligence: representations	347
Chapter summary	348
References	349
Epilogue	350
<i>Crucial glossary</i>	353
<i>Extended glossary</i>	355
<i>Index</i>	359

List of figures and tables

Figures

Reference figure	xx
1.1 The brain of an extinct primate	10
2.1 Graphical definitions of cladistic terms	18
2.2 Phyletic dwarfism in callitrichid primates	20
3.1 Differing views of primate relations	34
3.2 Mammalian evolutionary tree before molecular phylogenies	35
3.3 An evolutionary tree of eutherian mammals	37
3.4 An evolutionary tree of Euarchontoglires	38
3.5 An evolutionary tree of Euarchontoglires, emphasizing anthropoids	41
3.6 An evolutionary tree of catarrhines	42
4.1 Geological epochs and eras	50
4.2 Chronograms of Euarchontoglires and primates	52
4.3 Tooth morphology and diet	57
4.4 Global surface temperature during the Cenozoic	59
5.1 An evolutionary tree of primates	65
5.2 Dentition in plesiadapiforms	68
5.3 Eocene geography	75
6.1 Convergent evolution in distantly related primates	89
6.2 Chronogram of Euarchontans	90
6.3 Anthropoid extinctions during the Oligocene bottleneck in North Africa	92
6.4 The evolution of body size in anthropoids	93
6.5 Selective pressures and anthropoid adaptations	94
6.6 Evolutionary trajectories of femur morphology in anthropoids	95
6.7 Climate change and adaptive radiations	97
7.1 Brain–body relationships in primates and other mammals	110
7.2 Virtual cranial endocasts of fossil primates	115
7.3 Eocene grade-shifts in encephalization	117
7.4 Eocene grade-shifts in corticalization	118
7.5 Longevity and encephalization	120
7.6 Summary of Eocene grade-shifts	121
8.1 Encephalization quotients in mammals	126

xviii List of figures and tables

8.2	Upward grade-shifts during anthropoid evolution	127
8.3	The emergence and loss of sulci in anthropoids	131
8.4	Olfactory bulb contraction	134
8.5	Cortical expansion in hominins	136
8.6	Encephalization in hominins	137
8.7	Encephalization quotients and estimated divergence times in hominins and panins	138
8.8	Changes in human brains and brain shape in hominids	140
8.9	Skull shape in <i>Homo</i> species	141
8.10	Anterior temporal bulging in four human species and chimpanzees	142
8.11	Grade-shifts in brain size–body size allometry in primates	143
8.12	Summary of Eocene and Miocene grade-shifts	144
9.1	Upward grade-shifts in cortex size and periods of global cooling	153
9.2	Brain size, body size, land productivity, and rainfall	157
10.1	EQ values in fossil and modern mammals	162
10.2	Cortical grade-shifts in cetaceans	168
10.3	Cortical grade-shifts in artiodactyls	170
10.4	Cortical grade-shifts in carnivores	171
10.5	Cortical grade-shifts in rodents	173
11.1	Diversity of Euarchontoglires cortex	182
11.2	Tree shrew phylogeny	184
11.3	Grade difference in posterior parietal cortex	187
11.4	Ideas about homologies among frontal areas in rodents and primates	189
11.5	Types of cerebral cortex	190
11.6	Cortical organization in mammals	196
12.1	Cortical maps in selected Euarchontoglires	212
12.2	Action maps in selected Euarchontoglires	218
12.3	Transcortical networks	219
13.1	Relative size of the frontal lobe in Euarchontoglires	232
13.2	Cortical maps of an anthropoid and a strepsirrhine	234
13.3	Types of frontal cortex in selected Euarchontoglires	235
13.4	Phylogeny of traits involved in grasping and manipulation	239
13.5	Fingers, “foveas,” and frugivory	239
13.6	Action maps in galagos, squirrel monkeys, and rhesus macaques	241
14.1	Prefrontal predominance in humans	256
14.2	Expansion of the prefrontal cortex in humans	257
14.3	Preferential expansion of prefrontal cortex	258
14.4	Myelin density in the cortex of four anthropoids	260
14.5	Relative expansion of cortical regions	263

14.6	Evolutionary changes in the temporal lobe of anthropoids and frontotemporal pathways	265
14.7	Hippocampal contraction in anthropoids, followed by expansion in humans	266
14.8	Neuronal density and counts for the cerebral cortex	267
14.9	Genetics of cortical expansion in hominins	269
15.1	Conjunctive representations in the cortex of primates	286
15.2	The ventral visual stream in anthropoids	288
15.3	Primate social and mating systems	293
16.1	Relation between clique size and corticalization	303
16.2	Anthropoid synapomorphies	304
16.3	The sources of visual feature conjunctions in frontal cortex: dorsal and ventral visual streams	312
17.1	Transcortical networks in humans	321
17.2	Technological knowledge and cortical expansion	323
18.1	Cortical evolution in primates	340
18.2	Cortical evolution in primates: simplified	347

Table

17.1	Selective factors that might have contributed to cortical expansion in hominins	318
