PART I Patterns and Processes of Becoming: A Framework for Understanding Animal Development

1 The Making of a Body and a Field Introduction to Developmental Biology 1

- 1.1 "How Are You, You?" The Questions of Developmental Biology 3
 - Articulating the questions of developmental biology 4
 - Choosing the organism to study the question: The "model system" 5
- 1.2 The Cycle of Life 7
 - An animal's life cycle 7
 - Example: A frog's life 9
 - A flowering plant's life cycle 12
 - Example: *Arabidopsis* (consider the mustard seed) 13
- 1.3 Cell Movements in the Embryo 14
 - Cell types and their behaviors 15
 - Gastrulation: "The most important time in your life" 15
 - The primary germ layers and early organs 16
- 1.4 Watching Development: Some Basic Methods 17
 - Approaching the bench:
 - "Find it, lose it, move it" 17
 - Direct observation of living embryos 17
 - Dye marking 18
 - Genetic labeling 18
 - Transgenic DNA chimeras 20
- 1.5 Personal Significance: Medical Embryology and Teratology 21
- 1.6 Developmental Biology and Evolution 22
 - Evolutionary embryology: The early years 22
 - Analogy and homology 25
 - The tree of life and our developmental relatedness 26
- Coda 33
- Snapshot Summary 34

2 Specifying Identity Mechanisms of Developmental Patterning 39

- 2.1 Levels of Commitment 36
- 2.2 Autonomous Specification 37
 - Cytoplasmic determinants and autonomous specification in tunicates 37
- 2.3 Conditional Specification 40
 - Position matters: Conditional specification in the sea urchin embryo 40
 - It depends on how you slice it: Specification in the plant embryo 42
- 2.4 Syncytial Specification 43
 - Opposing gradients define axial position 43
 - Differentially specifying all the nuclei in the room 44
- 2.5 Mapping Cell Maturation 46
- Snapshot Summary 48

3 Differential Gene Expression Mechanisms of Cell Differentiation 49

- 3.1 Defining Differential Gene Expression 50
 - Protein synthesis: A quick primer 50
- 3.2 Evidence for Genomic Equivalence 52
- 3.3 Functional Organization and Anatomy of the Gene 54
 - A view of the genomic forest 54
 - Chromatin 55
 - Exons and introns 57
- Other major elements of a eukaryotic gene 58
 - The transcription product and how it is processed 59
- 3.4 Noncoding Regulatory Elements: The On, Off, and Dimmer Switches of a Gene 59
- 3.5 Mechanisms of Differential Gene Expression: Transcription 64

- Epigenetic modification: Modulating access to genes 64
- Transcription factors regulate gene transcription 69
- Pioneer transcription factors: Breaking the silence 71
- Transcriptional regulation of floral organ identity genes: Learn the ABCs 73
- The gene regulatory network: Defining an individual cell 75
- 3.6 Mechanisms of Differential Gene Expression: Pre-messenger RNA Processing 76**
- Creating protein families through alternative pre-mRNA splicing 77

- 3.7 Mechanisms of Differential Gene Expression: mRNA Translation 79**
- Message stability and differential mRNA longevity 80
- Stored oocyte mRNAs: Selective inhibition of mRNA translation 80
- microRNAs: Specific regulation of mRNA translation and transcription 81
- 3.8 Mechanisms of Differential Gene Expression: Posttranslational Protein Modification 84**
- Coda 85
- Snapshot Summary 86

4 Cell-to-Cell Communication Mechanisms of Morphogenesis 87

- 4.1 Cell-to-Cell Communication 88**
- 4.2 Adhesion and Sorting: The Physics of Morphogenesis 89**
- Differential cell affinity 90
- The thermodynamic model of cell interactions 91
- Cadherins and cell adhesion 92
- 4.3 The Extracellular Matrix as a Source of Developmental Signals 95**
- Macromolecular components of the ECM 96
- Integrins: Receptors for ECM molecules 97
- 4.4 The Epithelial-Mesenchymal Transition 97**
- 4.5 Induction and Competence 98**
- Defining induction and competence 98
- Construction by induction: Building the vertebrate eye 99
- 4.6 Morphogen Gradients and Signal Transduction Cascades 102**
- Morphogen gradients 103
- Signal transduction cascades: The response to inducers 105
- 4.7 Paracrine Families: Inducer Molecules and Morphogens 106**
- Fibroblast growth factors 106
- The Hedgehog family 110
- The Wnt family 113
- The TGF- β superfamily 117
- Other paracrine factors 118
- 4.8 The Cell Biology of Paracrine Signaling 123**
- Diffusion of paracrine factors 123
- Focal membrane protrusions as signaling sources 126
- 4.9 Juxtacrine Signaling for Cell Identity 128**
- The Notch pathway: Juxtaposed ligands and receptors for pattern formation 129
- Paracrine and juxtacrine signaling in coordination: Vulval induction in *C. elegans* 129
- Snapshot Summary 132 5 133

5 Stem Cells Their Potential and Their Niches 133

- 5.1 The Stem Cell Concept 134**
- Division and self-renewal 134
- Potency defines a stem cell 134
- 5.2 Stem Cell Regulation 137**
- 5.3 Pluripotent Stem Cells 138**
- Meristem cells of *Arabidopsis thaliana*: The embryo and beyond 138
- Cells of the inner cell mass in the mouse embryo 141
- Adult stem cell niches in animals 143
- 5.4 The Neural Stem Cell Niche of the Adult Brain 146**
- Neural stem cells 146
- The stem cell niche of the V-SVZ 147
- 5.5 The Adult Intestinal Stem Cell Niche 153**
- Clonal renewal in the crypt 154
- 5.6 Stem Cells Fuel Diverse Cell Lineages in Adult Blood 156**
- The hematopoietic stem cell niche 156
- 5.7 Mesenchymal Stem Cells Support a Variety of Adult Tissues 159**
- Regulation of MSC development 160
- 5.8 Human Model Systems to Study Development and Disease 162**
- Embryonic stem cells and regenerative medicine 163
- Induced pluripotent stem cells 165
- Organoids: Human organogenesis in a culture dish 168
- Coda 173
- Snapshot Summary 173

PART II Gametogenesis and Fertilization: The Circle of Sex

6 Sex Determination and Gametogenesis 175

- 6.1 **Chromosomal Sex Determination in Mammals** 176
 - The mammalian pattern of sex determination 176
 - Primary sex determination in mammals 176
 - Gonadal development in humans 177
 - Decisions, decisions: Genetic mechanisms of gonadal sex determination 180
- 6.2 **Secondary Sex Determination in Mammals: Hormonal Regulation of the Sexual Phenotype** 183
 - The female phenotype 183
 - The male phenotype 186
 - Correlation of primary and secondary sexual phenotypes in humans 186
 - Mammalian sex determination: Summary 188
- 6.3 **Chromosomal Sex Determination in *Drosophila*** 189
 - The *Sex-lethal* gene 190
 - Doublesex*: The “switch gene” for sex determination 191
 - Drosophila* sex determination: Summary 192
- 6.4 **Environmental Sex Determination in Reptiles** 193
- 6.5 **Gametogenesis in Animals** 196
 - PGCs in mammals: From genital ridge to gonads 196
 - Meiosis: The intertwining of life cycles 199
 - Spermatogenesis in mammals 202
 - Oogenesis in mammals 203
- 6.6 **Sex Determination and Gametogenesis in Angiosperm Plants** 206
 - Signaling flower formation 208
 - Male and female floral organs 208
 - Gametogenesis 210
- Snapshot Summary** 211

7 Fertilization Beginning a New Organism 211

- 7.1 **Structure of the Gametes** 212
 - Sperm anatomy 212
 - Egg anatomy 214
- 7.2 **External Fertilization in Echinoderms** 217
 - Sperm attraction: Action at a distance 218
 - The acrosome reaction 220
 - Recognition of the egg's extracellular coat 221
 - Fusion of the egg and sperm cell membranes 222
 - Prevention of polyspermy 223
 - Activating the egg and initiating development 227
 - Late responses: Resumption of DNA and protein synthesis 228
 - Fusion of genetic material 230
- 7.3 **Internal Fertilization in Mammals** 231
 - Getting the gametes into the oviduct: Translocation 232
 - Capacitation 233
 - Hyperactivation, directed sperm migration, and the acrosome reaction 234
 - Recognition at the zona pellucida 235
 - Gamete fusion and sperm entry 236
 - Activation of the mammalian egg 238
 - Fusion of genetic material 239
- 7.4 **Fertilization in Angiosperm Plants** 240
 - Pollination and the progamic phase 240
 - Double fertilization and gamete activation 243
- Coda** 244
- Snapshot Summary** 245

PART III Early Development: Cleavage, Gastrulation, and Axis Specification

8 Conceptualizing Early Development An Overview of the Essential Processes 247

- 8.1 **Early Development Shapes the Tree of Life** 248
 - Diploblastic animals: Cnidarians and ctenophores 248
 - Triploblastic animals: Protostomes and deuterostomes 250
 - Common themes of early development 250
- 8.2 **From One Cell to Many: Cleavage** 251
 - Patterns of cleavage 252
- 8.3 **The “Goals” of Gastrulation** 255
 - Cell movements during gastrulation 255
 - The evolutionary origins of gastrulation 255
 - The evolutionary context of gastrulation: A summary 260
- 8.4 **Achieving the “Goals”: Canonical Events that Power Gastrulation** 260
 - Step 1: Initiate the site of internalization 261
 - Step 2: Move cells inside 263
 - Step 3: Axis elongation 266

| | | | | |
|-----|--|-----|--|-----|
| 8.5 | The “Aim” of Axis Determination | 270 | The common developmental mode for axis formation | 274 |
| | Organizing the embryo: A historical transformation | 271 | Snapshot Summary | 276 |
| | Organizing the embryo: Futuristic formations | 273 | | |

9 Snails, Flowers, and Nematodes Different Mechanisms for Similar Patterns of Specification **277**

| | | | | | |
|-----|--|-----|-----|---|-----|
| 9.1 | Spiral Patterning and Cleavage in Snail Embryos | 278 | 9.4 | The Nematode <i>C. elegans</i> | 292 |
| | Maternal regulation of snail cleavage | 279 | | Fertilization and cleavage in <i>C. elegans</i> | 293 |
| 9.2 | Developing a Spiral: A Plant’s Perspective | 282 | | Gastrulation in <i>C. elegans</i> | 294 |
| | Spiral patterns from stresses in the inflorescence meristem | 284 | | Anterior-posterior axis formation | 296 |
| | Auxin: Spiral patterns by positive feedback | 285 | | Dorsal-ventral and right-left axis formation | 297 |
| 9.3 | Gastrulation and Axis Determination in Snails | 288 | | Control of blastomere identity | 298 |
| | The D quadrant “organizer” | 289 | | Coda | 300 |
| | It depends how you slice it: The role of BMP/Dpp signaling in spiralian axis specification | 291 | | Snapshot Summary | 301 |

10 The Genetics of Axis Specification in *Drosophila* **303**

| | | | | | |
|------|---|-----|------|--|-----|
| 10.1 | Early <i>Drosophila</i> Development | 305 | 10.4 | Segmentation Genes | 319 |
| | Fertilization | 306 | | Segments and parasegments | 319 |
| | Cleavage | 306 | | The gap genes | 320 |
| | The mid-blastula transition | 308 | | The pair-rule genes | 322 |
| | Gastrulation | 308 | | The segment polarity genes | 323 |
| 10.2 | The Genetic Mechanisms Patterning the <i>Drosophila</i> Body | 312 | 10.5 | The Homeotic Selector Genes | 325 |
| 10.3 | Maternal Gradients: Anterior-Posterior Polarity | 314 | 10.6 | Generating the Dorsal-Ventral Axis | 328 |
| | Polarity regulation by the oocyte cytoplasm | 315 | | Dorsal-ventral patterning in the oocyte | 328 |
| | Gradients of translational inhibitors | 316 | | Generating the dorsal-ventral axis within the embryo | 329 |
| | The terminal gene group | 318 | 10.7 | Axes and Organ Primordia: The Cartesian Coordinate Model | 331 |
| | Specifying anterior-posterior polarity in <i>Drosophila</i> : Summary | 318 | | Coda | 332 |
| | | | | Snapshot Summary | 333 |

11 Sea Urchins and Tunicates Deuterostome Invertebrates **335**

| | | | | | |
|------|--|-----|------|--|-----|
| 11.1 | Early Development in Sea Urchins | 336 | 11.4 | Early Development in Tunicates | 350 |
| | Early cleavage | 336 | | Tunicate cleavage | 351 |
| | Blastula formation | 338 | | Tunicate gastrulation | 351 |
| 11.2 | Sea Urchin Gastrulation | 339 | 11.5 | Axis Determination in the Tunicate Embryo | 352 |
| | Ingression of the skeletogenic mesenchyme | 340 | | The tunicate fate map | 352 |
| 11.3 | Determination of the Sea Urchin Blastomeres | 346 | | Autonomous and conditional specification of tunicate blastomeres | 353 |
| | Gene regulatory networks and skeletogenic mesenchyme specification | 347 | | Snapshot Summary | 356 |
| | Specification of the vegetal cells | 350 | | | |

12 Amphibians and Fish 357

- 12.1 **Fertilization and Cleavage in Amphibians** 358
 - Fertilization and cortical rotation 358
 - Cleavage 360
 - The mid-blastula transition:
 - Preparing for gastrulation 361
- 12.2 **Amphibian Gastrulation** 361
 - Epiboly of the prospective ectoderm 361
 - Vegetal rotation and invagination of the bottle cells 363
 - Involution at the blastopore lip 366
 - Convergent extension of the dorsal mesoderm 368
 - Specification of the germ layers 370
- 12.3 **Axis Formation and the Amphibian Organizer: Molecular Mechanisms** 372
 - Discovery of the organizer 373
 - How does the organizer form? 373
- 12.4 **Functions of the Organizer** 378
- Induction of neural ectoderm and dorsal mesoderm:
 - BMP antagonists 379
 - Conservation of BMP signaling during dorsal-ventral patterning 382
- 12.5 **Neural Induction along the Anterior-Posterior Axis** 382
 - Anterior-posterior and dorsal-ventral axis formation: A Summary 386
- 12.6 **The Amphibian Left-Right Axis** 387
- 12.7 **Early Zebrafish Development** 388
 - Zebrafish cleavage: Yolking up the process 388
 - Gastrulation and formation of the germ layers 392
 - The embryonic shield and the neural keel 395
- 12.8 **Axis Formation in Zebrafish** 396
 - Teasing apart the powers of Nodal and BMP during axis determination 397
 - Left-right axis formation 399
- Snapshot Summary** 400

13 Birds and Mammals 403

- 13.1 **Early Development in Birds** 405
 - Fertilization and cleavage 405
 - Avian gastrulation 405
- 13.2 **The Primitive Streak: Gateway to Gastrulation** 409
 - The avian primitive streak 409
 - Axis specification and the avian “organizer” 410
 - Regression of the primitive streak and epiboly of the ectoderm 413
 - Left-right axis formation 414
 - The tail: A coda to gastrulation 416
- 13.3 **Early Mammalian Development** 416
 - The unique nature of mammalian cleavage 417
 - Compaction and the formation of the blastocyst 418
 - Cavitation 419
- 13.4 **Mammalian Gastrulation** 420
 - Modifications for development inside another organism 420
- 13.5 **Mammalian Axis Formation** 424
 - The anterior-posterior axis:
 - Two signaling centers 424
 - Anterior-posterior patterning:
 - The Hox code hypothesis 426
 - The vertebrate tail 431
- Coda** 432
- Snapshot Summary** 434

14 Early Human Development 435

- 14.1 **Some Distinctions of Human Development** 436
 - The *Homo sapiens* life cycle (very briefly) 436
 - The specialized vocabulary of human embryology 437
 - Pregnancy and embryonic development 439
 - Birth 440
- 14.2 **Oogenesis and Ovulation** 441
 - Oogenesis 442
 - Ovulation 443
 - Aneuploidy: When meiosis generates the wrong number of chromosomes 444
- 14.3 **Fertilization, Cleavage, and Hatching** 447
 - Activation of the oocyte 447
 - Cleavage 447
 - Hatching 450
- 14.4 **Implantation: The Interplay of Trophoblast and Uterus** 450
 - Preparing the uterus for pregnancy 450
 - Implantation 451
 - The inflammation theory of implantation:
 - Turning foes into allies 454

- 14.5 Gastrulation and the Formation of Extraembryonic Tissues** 456
Preparing for gastrulation: Formation of the epiblast and amnion 456
Gastrulation and the placenta 456
Formation of the placenta 458
Twinning 462
- 14.6 Infertility: Problems Initiating Development** 463
Circumventing infertility: In vitro fertilization 464
- 14.7 Developmental Disorders: Genetic Alterations** 465
The developmental nature of human syndromes 465
Genetic and phenotypic heterogeneity 468
- 14.8 Environmental Disruption of Human Development** 469
Alcohol as a teratogen 471
Endocrine disruptors 473
Endocrine disruptors and gametogenesis 475
BPA and aneuploidy 477
Transgenerational inheritance of developmental disorders 477
- 14.9 The Role of Chance in Altering Human Development** 479
Snapshot Summary 481

PART IV Building with Ectoderm: The Vertebrate Nervous System and Epidermis

15 Neural Tube Formation and Patterning 481

- 15.1 Neurulation: The Birth of the Nervous System** 482
Transforming the neural plate into the neural tube 483
Primary neurulation 485
Secondary neurulation 493
- 15.2 Patterning the Central Nervous System** 494
The anterior-posterior axis 495
The dorsal-ventral axis 496
Opposing morphogens 496
- 15.3 The Axes Come Together** 499
Snapshot Summary 501

16 Brain Growth 503

- 16.1 Neuroanatomy of the Developing Central Nervous System** 504
The cells of the developing central nervous system 504
Tissues of the developing central nervous system 505
- 16.2 Developmental Mechanisms Regulating Brain Growth** 509
Neural stem cell behaviors during division 509
Neurogenesis: Building from the bottom up (or from the inside out) 510
- Glia as scaffolds for layering the cerebellum and neocortex 512
Signaling mechanisms regulating development of the neocortex 513
- 16.3 Development of the Human Brain** 518
Fetal neuronal growth rate continues after birth 518
Hills raise the horizon for learning 519
Changes in transcript quantity 522
Snapshot Summary 524

17 Neural Crest Cells and Axonal Specificity 525

- 17.1 The Nature of the Neural Crest** 526
Regionalization of the neural crest 526
Are most neural crest cells multipotent? 528
Specification of neural crest cells 530
- 17.2 Neural Crest Cell Migration: Epithelial to Mesenchymal and Beyond** 532
Delamination 533
The driving force of contact inhibition 535
Collective migration 535
- 17.3 Migration Pathways of Trunk Neural Crest Cells** 536
The ventral pathway 537
The dorsolateral pathway 540
The neural crest (so far): A brief summary 542
- 17.4 Migration of Cranial Neural Crest Cells** 542
The "chase and run" model: An elaborate collaboration of pushes and pulls 544
Neural crest-derived head skeleton 546
- 17.5 Cardiac Neural Crest** 547

- 17.6 Establishing Axonal Pathways in the Nervous System** 549
 - The growth cone: Driver and engine of axon pathfinding 550
 - Rho, Rho, Rho your actin filaments down the signaling stream 550
 - Axon guidance 551
- 17.7 The Intrinsic Navigational Programming of Motor Neurons** 553
 - Cell adhesion: "Grabbing the road" 554
 - Local and long-range guidance molecules: "Street signs" 555
 - Ephrins and semaphorins: Repulsion patterns 555
- 17.8 Commissural Neurons: How Did the Axon Cross the Road?** 557
 - Netrin 557
 - Slit and Robo 558
- 17.9 The Travels of Retinal Ganglion Axons** 561
 - Growth of the retinal ganglion axon to the optic nerve 561
 - Growth of the retinal ganglion axon through the optic chiasm 561
- 17.10 Target Selection: "Are We There Yet?"** 563
 - Chemotactic proteins: Chemical addresses 563
 - Quantity and quality 563
 - Target selection by retinal axons: "Seeing is believing" 563
- 17.11 Synapse Formation** 566
- Snapshot Summary** 570

18 Ectodermal Placodes and the Epidermis 573

- 18.1 Cranial Placodes: The Senses of Our Heads** 574
 - Anterior, intermediate, and posterior cranial placodes 574
 - Cranial placode induction 575
- 18.2 Otic-Epibranchial Development: A Shared Experience** 576
 - Otic and epibranchial placode induction 577
 - Otic morphogenesis 578
 - Anatomy of the inner ear 580
 - Axis determination of the otocyst 580
- 18.3 Development of the Vertebrate Eye** 581
 - Morphogenesis of the eye 581
 - Formation of the eye field:
 - The beginnings of the retina 583
 - The lens-retina induction cascade 585
- 18.4 Non-Sensory Placodes: The Epidermis and Its Cutaneous Appendages** 587
 - Stem cells to dead cells:
 - The saga of the epidermis 587
 - The ectodermal appendages 589
 - Recombination experiments: The roles of epithelium and mesenchyme 590
 - Signaling pathways you can sink your teeth into 591
 - Stem cells of the epidermal appendages 592
- Snapshot Summary** 596

PART V Building with Mesoderm and Endoderm: Organogenesis

19 Paraxial Mesoderm The Somites and Their Derivatives **597**

- 19.1 Cell Types of the Somite** 600
- 19.2 Establishing the Paraxial Mesoderm and Cell Fates along the Anterior-Posterior Axis** 601
 - Specification of the paraxial mesoderm 602
 - A rostral-caudal antagonism specifies paraxial mesoderm from neural fates 602
 - Spatiotemporal collinearity of Hox genes determines identity along the trunk 603
- 19.3 Somitogenesis** 606
 - Axis elongation: A caudal progenitor zone and tissue-to-tissue forces 607
 - How a somite forms: The clock-wavefront model 611
 - Linking the clock-wavefront to Hox-mediated axial identity and the end of somitogenesis 617
- 19.4 Sclerotome Development** 619
 - Vertebrae formation 621
 - Tendon formation: The syndetome 624
- 19.5 Dermomyotome Development** 625
 - Determination of the central dermomyotome 627
 - The myotome and muscle development: Myogenic regulatory factors 627
- Snapshot Summary** 631

20 Intermediate and Lateral Plate Mesoderm Heart, Blood, and Kidneys 633

- 20.1 **Intermediate Mesoderm: The Kidney** 634
 - Specifying the intermediate mesoderm: Pax2, Pax8, and Lim1 636
 - Reciprocal interactions of developing kidney tissues 637
 - Mechanisms of reciprocal induction 638
- 20.2 **Lateral Plate Mesoderm: Heart and Circulatory System** 643
- 20.3 **Heart Development** 644
 - A minimalist heart 644
 - Formation of the heart fields 645
 - Specification of cardiogenic mesoderm 647
 - Migration of the cardiac precursor cells 647

- Initial heart cell differentiation 650
- Looping of the heart 650
- 20.4 **Blood Vessel Formation** 652
 - Vasculogenesis: The initial formation of blood vessels 652
 - Angiogenesis: Sprouting of blood vessels and remodeling of vascular beds 655
- 20.5 **Hematopoiesis: Stem Cells and Long-Lived Progenitor Cells** 656
 - Sites of hematopoiesis 656
 - The bone marrow HSC niche 658

Coda 661
Snapshot Summary 662

21 Development of the Tetrapod Limb 663

- 21.1 **The Limb Bud** 665
- 21.2 **Hox Gene Specification of Limb Skeleton Identity** 666
 - From proximal to distal: Hox genes in the limb 666
 - Hox genes and beyond 668
- 21.3 **Determining What Kind of Limb to Form and Where to Put It** 669
 - Specifying the limb fields 669
 - Induction of the early limb bud 670
 - The apical ectodermal ridge generates a second feedback loop 675
- 21.4 **Outgrowth: The Proximal-Distal Axis** 675
 - Determining proximal-distal polarity: The role of the AER 676
 - Gradient models of limb patterning 677

- 21.5 **Turing's Model: A Mechanism for Proximal-Distal Limb Development** 680
 - 21.6 **Specifying the Anterior-Posterior Axis** 684
 - Sonic hedgehog defines a zone of polarizing activity 684
 - Specifying digit identity by Sonic hedgehog 686
 - Sonic hedgehog and FGFs: Yet more feedback loops 687
 - Hox genes are part of the regulatory network specifying digit identity 688
 - 21.7 **Generating the Dorsal-Ventral Axis** 693
 - 21.8 **Cell Death and the Formation of Digits and Joints** 694
 - Sculpting the autopod 695
 - Forming the joints 695
 - 21.9 **Evolution by Altering Limb Signaling Centers** 697
- Snapshot Summary** 700

22 The Endoderm Tubes and Organs for Digestion and Respiration 701

- 22.1 **Emergence of the Endoderm** 702
- 22.2 **The Pharynx** 705
- 22.3 **The Digestive Tube and Its Derivatives** 706
 - Specification of the gut tissue 706
 - The intestines 709
- 22.4 **Accessory Organs: Liver, Pancreas, and Gallbladder** 711
 - Liver formation 711

- Pancreas formation 712
 - The gallbladder 715
 - 22.5 **The Respiratory Tube** 715
 - Epithelial-mesenchymal interactions and the biomechanics of branching in the lungs 716
- Snapshot Summary** 720

PART VI Postembryonic Development

23 Metamorphosis The Hormonal Reactivation of Development 721

- | | |
|--|--|
| <p>23.1 Amphibian Metamorphosis 722</p> <p>Morphological changes associated with amphibian metamorphosis 722</p> <p>Hormonal control of amphibian metamorphosis 725</p> <p>Regionally specific developmental programs 727</p> | <p>23.2 Metamorphosis in Insects 728</p> <p>Imaginal discs 729</p> <p>Hormonal control of insect metamorphosis 732</p> <p>The molecular biology of 20-hydroxyecdysone activity 734</p> <p>Determination of the wing imaginal discs 735</p> <p>Snapshot Summary 738</p> |
|--|--|

24 Regeneration The Development of Rebuilding 739

- | | |
|---|--|

26 Developmental Mechanisms of Evolutionary Change 807

| | | | |
|-------------|---|------------|--|
| 26.1 | Preconditions for Evolution: The Developmental Structure of the Genome | 808 | |
| | Modularity: Divergence through dissociation | 808 | |
| | Molecular parsimony: The small toolkit | 811 | |
| | Gene duplication and divergence | 812 | |
| 26.2 | Mechanisms of Evolutionary Change | 814 | |
| | Heterotopy | 814 | |
| | Heterochrony | 816 | |
| | Heterometry | 817 | |
| | Heterotypy | 820 | |
| 26.3 | Developmental Constraints on Evolution | 824 | |
| | Physical constraints | 824 | |
| | Morphogenetic constraints | 824 | |
| | Pleiotropy | 824 | |
| 26.4 | Ecological Evolutionary Developmental Biology | 825 | |
| | Plasticity-first evolution and genetic assimilation | 826 | |
| | Selectable epigenetic variation | 829 | |
| 26.5 | Evolution and Developmental Symbiosis | 830 | |
| | Symbiogenesis | 831 | |
| | Coda | 834 | |
| | Snapshot Summary | 835 | |
