

Modern Quantum Theory

From Quantum Mechanics to Entanglement and Quantum Information

Reinhold A. Bertlmann

Faculty of Physics, University of Vienna

Nicolai Friis

Institute of Atomic and Subatomic Physics—Atominstitut, TU Wien

OXFORD
UNIVERSITY PRESS

Contents

PART I QUANTUM MECHANICS	
1 Wave-Particle Duality	3
1.1 Planck's Law of Black-Body Radiation	3
1.2 The Photoelectric Effect	11
1.3 The Compton Effect	15
1.4 Bohr's Theses	18
1.5 Wave Properties of Matter	21
1.6 Heisenberg's Uncertainty Principle	23
1.7 The Double-Slit Experiment	26
1.8 Schrödinger's Cat	31
2 The Time-Dependent Schrödinger Equation	36
2.1 Wave Function and Time-Dependent Schrödinger Equation	36
2.2 The Continuity Equation	41
2.3 States and Observables	43
2.4 Expectation Values and Variances	49
2.5 The Uncertainty Principle	56
2.6 Time Evolution in Quantum Mechanics	61
2.7 Recovering Classical Physics	69
3 Mathematical Formalism of Quantum Mechanics	72
3.1 Hilbert Space	72
3.2 Operators on Finite-Dimensional Hilbert Spaces	77
3.3 Infinite-Dimensional Hilbert Spaces	82
4 The Time-Independent Schrödinger Equation	89
4.1 Solving the Schrödinger Equation	89
4.2 Bound States	94
4.3 Scattering and the Tunnel Effect	109
5 The Quantum Harmonic Oscillator	118
5.1 Algebraic Method	118
5.2 Analytic Method	124
5.3 Zero-Point Energy	126
5.4 Comparison with the Classical Oscillator	128
5.5 The Three-Dimensional Harmonic Oscillator	129
6 Orbital Angular Momentum	137
6.1 Angular Momentum and the Rotation Group	137

6.2	Rotations in the Hilbert Space	142
6.3	Angular Momentum Eigenstates and Eigenvalues	146
6.4	Angular Momentum Eigenfunctions	150
7	The Three-Dimensional Schrödinger Equation	159
7.1	The Radial Schrödinger Equation	159
7.2	Bound States in Three Dimensions	161
7.3	The Spherical Potential Well	164
7.4	The Coulomb Potential and the Stability of Matter	167
7.5	The Hydrogen Atom	176
8	Spin and Atomic Structure	185
8.1	The Magnetic Dipole Moment	185
8.2	Spin	191
8.3	The Atomic Structure—Revisited	202
9	Electromagnetism in Quantum Mechanics	224
9.1	The Pauli Equation	224
9.2	Gauge Symmetries in Quantum Mechanics	230
9.3	The Aharonov–Bohm effect	232
9.4	Geometric Phases	235
9.5	A Rush through Differential Geometry and Topology	248
9.6	Topological Interpretation of Physical Effects	261
10	Perturbative Methods in Quantum Mechanics	269
10.1	Time-Independent Perturbation Theory	269
10.2	The Fine Structure of the Hydrogen Atom	277
10.3	The Zeeman Effect	288
10.4	The Stark Effect for the Hydrogen Atom	293
10.5	Time-Dependent Perturbation Theory	307
 PART II ENTANGLEMENT AND NON-LOCALITY		
11	Density Matrices	321
11.1	Pure States	321
11.2	Mixed States	324
11.3	Time Evolution of Density Matrices	326
11.4	Density Matrices for Quantum Systems in Thermal Equilibrium	329
11.5	Density Matrices for Two-Level Quantum Systems	332
11.6	Geometry of the State Space	341
11.7	Density Matrices for Bipartite Quantum Systems	345
12	Hidden-Variable Theories	350
12.1	Historical Overview and Hidden-Variable Basics	350
12.2	Von Neumann and Additivity of Measurement Values	352
12.3	Contextuality	354
12.4	Statements Incompatible with Quantum Mechanics	355
12.5	The Kochen–Specker Theorem	357

13 Bell Inequalities	367
13.1 The EPR Paradox	367
13.2 Bell Inequalities—Theory	373
13.3 Bell Inequalities—Experiments	382
13.4 Interpretations of Quantum Mechanics	394
14 Quantum Teleportation	403
14.1 Quantum Teleportation	403
14.2 Experiments on Quantum Teleportation	408
14.3 Primitives of Quantum Communication	413
14.4 Quantum Key Distribution	428
15 Entanglement and Separability	434
15.1 Composite Quantum Systems	434
15.2 Entanglement and Separability	443
15.3 Entanglement and Non-Locality	452
15.4 Separability Criteria from Positive Maps	465
15.5 Geometry of Two-Qubit Quantum States	478
16 Quantification and Conversion of Entanglement	485
16.1 Quantifying Entanglement	485
16.2 Entanglement Measures for Mixed States	502
16.3 Entanglement Witnesses	518
16.4 Entanglement and Separability—A Choice of Factorization	530
17 High-Dimensional Quantum Systems	542
17.1 Bases for Density Matrices	542
17.2 Applications of Operator Bases	551
17.3 Entanglement of Qutrits, Qudits ...	557
17.4 Detecting and Quantifying High-Dimensional Entanglement	574
18 Multipartite Entanglement	593
18.1 Tripartite Systems	593
18.2 GHZ Theorem à la Mermin	600
18.3 Multipartite Systems	603
18.4 Entangled Entanglement	618
 PART III ADVANCED TOPICS IN MODERN QUANTUM PHYSICS	
19 Entropy of Classical Systems	629
19.1 Entropy in Thermodynamics and Statistical Physics	629
19.2 Shannon Entropy in Classical Information Theory	637
19.3 Relative Entropy, Joint and Conditional Entropy	644
19.4 Mutual Information	650
19.5 Rényi Entropy	653
20 Quantum Entropy and Correlations in Quantum Information	659
20.1 Von Neumann Entropy	659
20.2 Quantum Rényi Entropy	664

20.3	Quantum Relative Entropy and Quantum Joint Entropy	665
20.4	Quantum Conditional Entropy and Mutual Information	675
20.5	Conditional and Mutual Amplitude Operators	687
20.6	Negative Conditional Entropy and Geometry of Quantum States	694
20.7	Conditional Rényi Entropy and Non-Locality	701
21	Quantum Channels and Quantum Operations	704
21.1	Purification of Quantum States Revisited	704
21.2	Quantum Operations and Quantum Channels	705
21.3	Kraus Decomposition	708
21.4	The Church of the Larger Hilbert Space	712
21.5	Impossible Operations—No Cloning	721
22	Open Quantum Systems, Decoherence, Atom-Field Coupling	726
22.1	Interaction of System and Environment	726
22.2	Markovian Dynamics and Master Equations	732
22.3	Emission and Absorption of Photons	738
22.4	The Jaynes–Cummings Model	746
23	Quantum Measurements	758
23.1	Von Neumann Measurements	758
23.2	Positive Operator-Valued Measures (POVMs)	760
23.3	Non-Ideal Projective Measurements	767
23.4	Distinguishing Quantum States	773
24	Quantum Metrology	777
24.1	Quantum Parameter Estimation	777
24.2	The Quantum Cramér–Rao Bound and Heisenberg Scaling	791
24.3	Bayesian Parameter Estimation	804
25	Quantum States of Light	817
25.1	Quantization of the Electromagnetic Field	817
25.2	Coherent States	826
25.3	Phase Space in Quantum Mechanics—The Wigner Function	841
25.4	Gaussian States and Operations	848
26	Particle Physics—Bell Inequalities	865
26.1	K Mesons	865
26.2	Analogies and Quasi-Spin	869
26.3	Entanglement of Strangeness	870
26.4	Analogies and Differences for K Mesons	873
26.5	Bell Inequalities for K Mesons	874
27	Particle Physics—Entanglement and Decoherence	882
27.1	Decoherence Model for Entangled Particle Systems	882
27.2	Measurement of Entangled Kaons	884
27.3	Connection to Phenomenological Model	887
27.4	Decoherence and Entanglement Loss for Kaonic Systems	889

27.5 Entanglement of Beauty	897
27.6 Decoherence of Entangled Beauty	901
27.7 Open Quantum System and Particle Decay	902
