Foreword	xi
The science of the brain	xiii
1 Contribution of this book	xiii
2 History	xiv
3 Methodology	xiv
4 Overview of results	xv
5 Conclusion	xix
References	xix
Acknowledgements	xxi
1. A CRH2-ACTH theory of autism spectrum disorder	
1.1 Introduction	1
1.2 Theory	2
1.2.1 Urocortins (UCNs)	3
1.2.2 Steroids (STRDs)	4
1.2.3 Explaining ASD symptoms and properties	4
1.3 Evidence	6
1.3.1 Stress, CRH, ACTH	7
1.3.2 Anatomical growth	8
1.3.3 Growth agents & pathways	8
1.3.4 Sex steroids	9
1.3.5 Oxytocin	11
1.3.6 Food intake	11
1.4 Treatment	12
1.4.1 Detection	12
1.4.2 Preventive treatment	12
1.4.3 Symptomatic treatment	13
1.5 Discussion	13
List of abbreviations	15
References	16
2. A CRH2-CRH1 theory of anorexia and bulimia	
2.1 Introduction	29
2.2 Theory	30
2.2.1 CRH, CRH1, CRH2, serotonin	30
2.2.2 Anorexia nervosa (AN)	31
2.2.3 Bulimia nervosa	33
2.3 Evidence	33
2.4 Treatment	36
2.5 Discussion	37
List of abbreviations	38
References	39

3. A polyunsaturated fatty acid (PUFA) theory of schizophrenia	
3.1 Introduction	47
3.2 PUFA theory of schizophrenia (P*SZ)	48
3.3 PUFAs and PUFA derivatives in health	52
3.4 PUFAs and PUFA derivatives and stress	55
3.5 Evidence for P*SZ	56
3.5.1 PUFAs	56
3.5.2 Immunity and pain	60
3.5.3 ECB system	61
3.5.4 Hyperexcitability: neuromodulators, hormones, neurotransmitters	63
3.5.5 Coordinated network activity	65
3.5.6 Summary	65
3.6 Treatment	65
3.7 Discussion	70
List of abbreviations	73
References	74
4. A dynorphin theory of depression and bipolar disorder	
4.1 Introduction	95
4.2 Stress responses and MDD	96
4.3 A theory of opioids and survival responses	97
4.4 A theory of depression and bipolar disorder	101
4.5 Evidence	103
4.6 Treatment	107
4.7 Discussion	109
List of abbreviations	110
References	111
5. A CRH-HCN theory of obsessive-compulsive disorder (OCD)	
5.1 Theory	121
5.2 Treatment	124
5.3 Key references	124
References	127
6. A KATP channel theory of attention-deficit hyperactivity disorder	
6.1 Theory	131
6.2 Treatment	133
6.3 Evidence and references	134
References	136

7. A sympathetic nervous system theory of migraine	
7.1 Introduction	141
7.2 Theory	142
7.2.1 SNS and BRRs	142
7.2.2 TRPV1, CGRP	143
7.2.3 Migraine	144
7.3 Evidence	146
7.3.1 Basal state	146
7.3.2 Acute headache state	148
7.4 Treatment	148
7.5 Discussion	149
List of abbreviations	150
Acknowledgment	151
References	151
8. A ceramide theory of multiple sclerosis	
8.1 Introduction	161
8.2 Theory	162
8.2.1 Background	162
8.2.2 Multiple sclerosis	163
8.3 Evidence	165
8.4 Treatment	167
8.5 Discussion	167
List of abbreviations	169
References	170
9. A calcium channel $\alpha 2\delta$ subunit theory of amyotrophic lateral sclerosis and frontotemporal dementia	
9.1 Introduction	177
9.2 Voltage-gated calcium channels (VGCCs)	178
9.3 Proposed calcium & $\alpha 2\delta$ impairment in ALS	179
9.3.1 Motivation	179
9.3.2 Calcium part of the theory	179
9.3.3 $\alpha 2\delta$ part of the theory	180
9.4 ALS evidence	181
9.4.1 Calcium	181
9.4.2 Explanatory power for ALS facts	183
9.4.3 $\alpha 2\delta$	184
9.4.4 Insulin	185
9.5 Autoimmunity	187
9.6 Frontotemporal dementia (FTD)	189
9.7 Discussion	191
Acknowledgments	193
References	193
10. A galactose theory of Parkinson's disease	
10.1 Introduction	211
10.2 T*PD theory of PD	212

10.3 Evidence	215
10.3.1 Gut bacteria, mucin	215
10.3.2 Galactose	216
10.3.3 Glucose	216
10.3.4 Oxidative stress	217
10.3.5 Sympathetic nervous system	217
10.3.6 Risk & protective factors	218
10.4 Treatment	219
10.5 Discussion	219
List of abbreviations	221
Acknowledgments	221
References	221
 11. A lipid-raft theory of Alzheimer's disease	
11.1 Introduction	229
11.1.1 Overview of the theory of adaptive response plasticity	230
11.1.2 Overview of the lipid-raft theory of Alzheimer's disease	230
11.2 The theory of adaptive response plasticity	233
11.2.1 Double-edged plasticity	236
11.2.2 Long-term potentiation and long-term depression	236
11.2.3 The steady state	236
11.2.4 Candidate generation	237
11.2.5 Cholesterol, apolipoprotein E, and lipid rafts	239
11.2.6 Competition resolution: winners and losers	240
11.2.7 Summary	243
11.3 The lipid-raft theory of Alzheimer's disease	243
11.3.1 Mechanisms underlying symptoms and pathology	243
11.3.2 Chronicity	244
11.3.3 Cholesterol and amyloid β	244
11.3.4 Tau	245
11.3.5 Core cause	245
11.3.6 Autosomal dominant Alzheimer's disease	246
11.4 Evidence	246
11.4.1 Lipid rafts	246
11.4.2 Cholesterol	247
11.4.3 Polyunsaturated fatty acids	248
11.4.4 Plasticity agents	248
11.4.5 Synapses	248
11.4.6 Brain areas	248
11.4.7 Genetics	249
11.4.8 Other diseases	249
11.5 Risk and protective factors	249
11.5.1 Viral infections	249
11.5.2 Traumatic brain injury	249
11.5.3 Diabetes and obesity	250
11.5.4 Vascular impairment	250
11.5.5 Immunity	250
11.5.6 Stress	251

11.5.7 Smoking	251
11.5.8 Education and bilingualism	251
11.5.9 Exercise	251
11.6 Discussion	251
11.6.1 Related theories	252
11.6.2 The theory of adaptive response plasticity	252
11.6.3 Sleep	253
11.6.4 Neurogenesis	253
11.6.5 Dementia	253
11.6.6 Theory predictions	254
References	254
 12. The brain's adaptive response process: function and anatomy	
12.1 Explaining the brain	265
12.2 The adaptive response process (ARP)	265
12.2.1 Response selection	265
12.2.2 Response release: ARAR circuits	267
12.2.3 Novel vs. Automated (learned) responses	267
12.2.4 Agents	269
12.3 IINs: competition resolution (cres) & execution	269
12.4 Goals and predictions	270
12.5 The basal ganglia and the cerebellum	271
12.6 Hierarchical sequences (HSEQs)	272
12.7 Additional evidence	273
12.8 Discussion	275
12.8.1 The explanatory power and biological logic of the theory	275
12.8.2 Function and anatomy	276
12.8.3 Other theories; contribution	276
12.8.4 Action execution, observation, imagery	277
12.8.5 Language	278
12.8.6 Fully explaining the brain	278
12.8.7 Consciousness and emotions	279
Author's comment	279
References	279
 13. The brain's 'Allow, Restrain, Amplify, Respond' (ARAR) architecture	
13.1 Introduction	285
13.2 The D1 ARAR circuit	286
13.3 The D2 circuit: automated (learned) responses	287
13.3.1 The circuit	287
13.3.2 Problems with the standard D2 account	288
13.3.3 Evidence supporting a learned movement role of the D2 path	289
13.4 The extended amygdala ARAR circuit	293
13.5 The habenula ARAR circuit	293
13.6 The superior colliculus ARAR circuit	294

13.7 The hippocampus ARAR circuit	294
13.8 The cerebellum ARAR circuit	295
13.9 Discussion	295
References	296
14. A comprehensive biological theory of sleep	
14.1 Introduction	301
14.2 Theory overview	301
14.3 Wake activity	303
14.4 Homeostasis and its restoration	307
14.5 NREM sleep	310
14.6 REM sleep	312
14.7 Consciousness	314
14.8 Memory and plasticity	316
14.9 Anesthesia	318
14.10 Discussion	318
14.11 Conclusion	321
Acknowledgment	321
References	321
Index	329
