## Fundamentals of Developmental Cognitive Neuroscience

**Heather Bortfeld** 

University of California, Merced

## Silvia A. Bunge

University of California, Berkeley

## Contents

Preface					
AC	KHOW	leagments	XXII		
1	Introduction to Developmental Cognitive Neuroscience				
	1.1	What Is Developmental Cognitive Neuroscience?	1		
	1.2	Levels of Analysis and Levels of Structure	2		
	1.3	What Do We Gain from Understanding How the Brain Develops?	5		
	1.4	Brief History of the Field	6		
	1.5	Why Study Developmental Cognitive Neuroscience? (or How Do I Tell			
		Grandma What I'm Studying?)	8		
	1.6	What to Expect	9		
	Refe	rences	9		
2	Metl	nods and Populations	11		
	2.1	Studying Behavior across Development	12		
		2.1.1 Study Designs	13		
		2.1.2 Converging Technologies and Methods	15		
	2.2	Behavioral Studies	15		
		2.2.1 Studying Infant Cognition	16		
		2.2.2 Studying Child and Adolescent Cognition	17		
	2.3	Probing Human Brain Structure	19		
		2.3.1 Structural MRI	21		
		2.3.2 Diffusion-Weighted Imaging (DWI)	22		
	2.4	Probing Human Brain Function: Measures of Electrical Activity	25		
		2.4.1 Electroencephalography (EEG)	25		
		2.4.2 Event-Related Potentials (ERPs) Derived from EEG	29		
		2.4.3 Magnetoencephalography (MEG)	31		
	2.5	Probing Human Brain Function: Blood-Based Measures	33		
		2.5.1 Cerebral Blood Volume and Flow	33		
		2.5.2 Overview of fMRI	35		
		2.5.3 fNIRS	37		
	2.6	fMRI Data Analysis	42		
		2.6.1 The Basics	42		
		2.6.2 Interpretation of Pediatric fMRI Data	43		
		2.6.3 Functional Connectivity	44		

	Sun	nmary	48

	Fur	ther Reading	49	
	Ref	49		
3	Genes and Epigenetics			
	3.1	Interactive Specialization	55	
	3.2	Tracking Sources of Individual Variation	56	
		3.2.1 Heritability	57	
		3.2.2 Developmental Variance	58	
	3.3	What Genes Are	59	
		3.3.1 Genes as Units of Inheritance	59	
		3.3.2 Genes as Protein Encoders	62	
		3.3.3 The Big Picture	65	
	3.4	Genetic Variation	66	
		3.4.1 Mitosis	66	
		3.4.2 Meiosis	67	
	3.5	Mutations	68	
		3.5.1 Point Mutations	68	
		3.5.2 Single Nucleotide Polymorphisms	70	
		3.5.3 Chromosomal Mutations	71	
		3.5.4 Environmentally Induced Mutations	71	
	3.6	Epigenetics	72	
		3.6.1 Evidence of Epigenetic Effects in Humans	73	
		3.6.2 DNA Methylation	74	
		3.6.3 Histone Modification	75	
		3.6.4 The Epigenome as a Product of Gene–Environment		
		Interactions	75	
	3.7	"Genetic" Is Not Synonymous with "Heritable"	77	
	3.8	Neurodevelopmental Disorders (NDDs)	//	
	Sum	mary	80	
	Kev:	ew Questions	80	
	Fur	rences	80	
	Refe	rences	01	
4	Braiı	n Development	84	
	4.1	Basics of Brain Anatomy	85	
	4.2	Prenatal Brain Development: An Overview	89	
	4.3	From First Cell to Newborn	92	
		4.3.1 Gastrulation and Neural Induction	92	
		4.3.2 Emergence of Early Structure	93	
		4.3.3 Process of Neuronal Proliferation and Migration	96	
		4.3.4 Neuronal Differentiation and Death	96	

4.4.1   Early Cortical Expansion   98     4.4.2   Large-Scale Changes in Gray and White Matter   100     4.4.3   Gray Matter Thining   102     4.4.4   White Matter Microstructural Changes   104     4.4.5   Reorganization of Functional Brain Architecture   106     Summary   109     Review Questions   109     Further Reading   110     References   110     5   Brain Plasticity   114     5.1   Learning and Development: Broad Categories of Plasticity   115     5.1.2   Experience-Independent Brain Development   116     5.1.3   Experience-Dependent Brain Development   116     5.1.4   A Continuum from Development to Learning   117     5.2.1   Origins of the Idea   117     5.2.2   Dendritic Spines   118     5.3.3   Long-Term Potentiation and Hebbian Plasticity   119     5.3.4   A Critical Period for Plasticity   121     5.3.3   Long-Term Potentiation and Hebbian Plasticity   124     5.4.4   Critical Period for Plasticity   124     5.4.5		4.4	Postna	atal Brain Development	98
44.2   Large-Scale Changes in Gray and White Matter   100     44.3   Gray Matter Thinning   102     4.4.4   White Matter Microstructural Changes   104     4.4.5   Reorganization of Functional Brain Architecture   106     Summary   109   Review Questions   109     Review Questions   109   Review Questions   109     References   110   References   110     5   Brain Plasticity   115   5.1.1   Experience-Independent Brain Development   115     5.1.2   Experience-Dependent Brain Development   116   5.1.3   Experience-Dependent Brain Development   116     5.1.3   Experience-Dependent Brain Development   116   5.1.4   A Continuum from Development to Learning   117     5.2.7   Origins of the Idea   117   5.2.2   Dendritic Spines   118     5.3.1   Environmental Enrichment   119   5.3.2   A Critical Period for Plasticity   119     5.3.2   A Critical Period for Plasticity   124   124   124   124     5.4   Cortical Reorganization under Sensory Deprivation   126   5.4.2 <th></th> <th></th> <th>4.4.1</th> <th>Early Cortical Expansion</th> <th>98</th>			4.4.1	Early Cortical Expansion	98
