Contents

About the Authors	iii
Preface	ix
Acknowledgments	xvi

PART I

Basic Principles: How Traits Are Transmitted 1

Lawrence Manning/Corbis/Getty Images

chapter 1

Mendel's Principles of Heredity 1

- 1.1 The Puzzle of Inheritance 2
- 1.2 Genetic Analysis According to Mendel 4
- 1.3 Mendelian Inheritance in Humans 13

chapter 2

Extensions to Mendel's Laws 28

- 2.1 Extensions to Mendel for Single-Gene Inheritance 29
- 2.2 Extensions to Mendel for Two-Gene Inheritance 38
- 2.3 Extensions to Mendel for Complex Trait Inheritance 48
- 2.4 A Comprehensive Example: Dog Coat Color Genes 52

chapter 3

Chromosomes and Inheritance 67

- 3.1 Chromosomes: The Carriers of Genes 68
- 3.2 Mitosis: Cell Division that Preserves Chromosome Number 70
- 3.3 Meiosis: Cell Divisions that Halve Chromosome Number 76

■ *Genetics and Society: Prenatal Genetic Diagnosis* 71

chapter 4

Sex Chromosomes 91

- 4.1 Sex Chromosomes and Sex Determination 92

- 4.2 Gametogenesis 96
- 4.3 Sex Linkage 98
- 4.4 Sex-Linked and Sexually Dimorphic Traits in Humans 102
- 4.5 Human Intersexuality 106

■ *Fast Forward: Transgenic Mice Prove that SRY Is the Maleness Factor* 94

■ *Fast Forward: Visualizing X-Chromosome Inactivation in Transgenic Mice* 105

chapter 5

Linkage, Recombination, and Gene Mapping 119

- 5.1 Gene Linkage and Recombination 120
- 5.2 Recombination: A Result of Crossing-Over During Meiosis 124
- 5.3 Mapping: Locating Genes Along a Chromosome 129
- 5.4 The Chi-Square Test and Linkage Analysis 138
- 5.5 Tetrad Analysis in Fungi 142
- 5.6 Mitotic Recombination and Genetic Mosaics 150

■ *Fast Forward: Mapping the Crossovers that Generate the Chromosomes of Individual Human Sperm* 136

■ *Fast Forward: Gene Mapping Has Led to Treatments for Cystic Fibrosis* 138

■ *Tools of Genetics: The Chi-Square Test for Goodness of Fit* 141

■ *Genetics and Society: Mitotic Recombination and Cancer* 152

PART II

What Genes Are and What They Do 168

Adrian Neal/Lifesize/Getty Images

chapter 6

DNA Structure, Replication, and Recombination 168

- 6.1 Experimental Evidence for DNA as the Genetic Material 169

- 6.2 The Watson and Crick Double Helix Model of DNA 173
- 6.3 Genetic Information in Nucleotide Sequence 179
- 6.4 DNA Replication 181
- 6.5 Homologous Recombination at the DNA Level 188
- 6.6 Site-Specific Recombination 196

chapter 7

Mutation 207

- 7.1 Mutations: Primary Tools of Genetic Analysis 208
- 7.2 Molecular Mechanisms that Alter DNA Sequence 213
- 7.3 DNA Repair Mechanisms 222
- *Fast Forward: Trinucleotide Repeat Diseases* 220

chapter 8

Using Mutations to Understand Genes 235

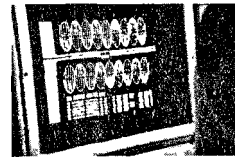

- 8.1 What Mutations Tell Us About Gene Structure 236
- 8.2 What Mutations Tell Us About Gene Function 244
- 8.3 What Mutations Tell Us About the Genetic Code 251
- 8.4 A Comprehensive Example: Mutations that Affect Vision 261

chapter 9

Gene Expression: The Flow of Information from DNA to RNA to Protein 275

- 9.1 Transcription: From DNA to RNA 276
- 9.2 Translation: From mRNA to Protein 285
- 9.3 Differences in Gene Expression Between Prokaryotes and Eukaryotes 292
- 9.4 The Effects of Mutations on Gene Expression and Function 294
- *Genetics and Society: HIV and Reverse Transcription* 280

PART III

CBS Photo Archive/Getty Images

Analysis of Genetic Information 311

chapter 10

Digital Analysis of DNA 311

- 10.1 Fragmenting DNA 312
- 10.2 Cloning DNA Fragments 317
- 10.3 Sequencing DNA 321
- 10.4 Sequencing Genomes 325

■ *Tools of Genetics: Serendipity in Science: The Discovery of Restriction Enzymes* 314

chapter 11

Genome Annotation 335

- 11.1 Finding the Genes in Genomes 336
- 11.2 Genome Architecture and Evolution 341
- 11.3 Bioinformatics: Information Technology and Genomes 349
- 11.4 A Comprehensive Example: The Hemoglobin Genes 350

chapter 12

Analyzing Genomic Variation 360

- 12.1 Variation Among Genomes 361
- 12.2 Genotyping a Known Disease-Causing Mutation 365
- 12.3 Sampling DNA Variation in a Genome 370
- 12.4 Positional Cloning 376
- 12.5 The Era of Whole-Genome Sequencing 383

■ *Fast Forward: Genetic Genealogy* 374

■ *Tools of Genetics: The Lod Score Statistic* 380

PART IV**How Genes Travel on Chromosomes 405**

(left): Texas A&M University/FEMA/Handout/Getty Images;
(right): Alpha/Zumapress/Newscom

chapter 13**The Eukaryotic Chromosome 405**

- 13.1 Chromosomal DNA and Proteins 406
- 13.2 Chromosome Structure and Compaction 407
- 13.3 Chromosomal Packaging and Gene Expression 412
- 13.4 Replication of Eukaryotic Chromosomes 418
- 13.5 Chromosome Segregation 421
- 13.6 Artificial Chromosomes 424

chapter 14**Chromosomal Rearrangements 435**

- 14.1 Rearrangements of Chromosomal DNA 436
- 14.2 The Effects of Rearrangements 440
- 14.3 Transposable Genetic Elements 450
- 14.4 Genome Restructuring and Evolution 457

■ **Fast Forward: Programmed DNA Rearrangements and the Immune System 438**

chapter 15**Ploidy 470**

- 15.1 Aberrations in Chromosome Number: Aneuploidy 471
- 15.2 Variation in Number of Chromosome Sets: Euploidy 474
- 15.3 Whole-Genome Duplication as a Driver of Evolution 480

chapter 16**Bacterial Genetics 488**

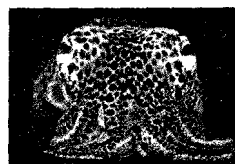

- 16.1 The Enormous Diversity of Bacteria 489
- 16.2 Bacterial Genomes 490
- 16.3 Bacteria as Experimental Organisms 495
- 16.4 Gene Transfer in Bacteria 497
- 16.5 Using Genetics to Study Bacterial Life 509
- 16.6 A Comprehensive Example: How *N. gonorrhoeae* Became Resistant to Penicillin 511

■ **Genetics and Society: The Human Microbiome Project 494**

chapter 17**Organellar Inheritance 522**

- 17.1 Mitochondria and Their Genomes 523
- 17.2 Chloroplasts and Their Genomes 526
- 17.3 The Relationship Between Organellar and Nuclear Genomes 528
- 17.4 Non-Mendelian Inheritance of Mitochondria and Chloroplasts 530
- 17.5 Mutant Mitochondria and Human Disease 535

■ **Fast Forward: Mitochondrial Eve 535**

PART V**How Genes Are Regulated 547**

Mattias Ormestad and Eric Roettinger/Kahi Kai

chapter 18**Gene Regulation in Prokaryotes 547**

- 18.1 The Elements of Prokaryotic Gene Expression 548
- 18.2 Regulation of Transcription Initiation via DNA-Binding Proteins 549
- 18.3 RNA-Mediated Mechanisms of Gene Regulation 561
- 18.4 Discovering and Manipulating Bacterial Gene Regulatory Mechanisms 565
- 18.5 A Comprehensive Example: Control of Bioluminescence by Quorum Sensing 570

chapter 19**Gene Regulation in Eukaryotes 582**

- 19.1 Overview of Eukaryotic Gene Regulation 583
- 19.2 Control of Transcription Initiation Through Enhancers 583
- 19.3 Regulation After Transcription 594
- 19.4 A Comprehensive Example: Sex Determination in *Drosophila* 599

■ **Tools of Genetics: The Gal4/UAS_G Binary Gene Expression System 590**

chapter 20**Epigenetics 612**

- 20.1 Transcriptional Regulation Through DNA Methylation 613
- 20.2 Genomic Imprinting 614
- 20.3 Inheritance of Programmed Gene Repression 617
- 20.4 Transgenerational Epigenetic Inheritance 620
- 20.5 A Comprehensive Example: Epigenetic Inheritance at the A Locus in Mice 622

PART VI

Michael Goldberg

Using Genetics 633**chapter 21****Manipulating the Genomes of Eukaryotes 633**

- 21.1 Creating Transgenic Organisms 634
- 21.2 Uses of Transgenic Organisms 637
- 21.3 Targeted Mutagenesis 641
- 21.4 Human Gene Therapy 648

■ *Tools of Genetics: Cloning by Somatic Cell Nuclear Transfer* 639

■ *Tools of Genetics: How Bacteria Use CRISPR/Cas9 to Vaccinate Themselves Against Viruses* 647

■ *Genetics and Society: Should We Alter Human Germ-Line Genomes?* 652

chapter 22**Genetic Analysis of Development 663**

- 22.1 Model Organisms: Prototypes for Developmental Genetics 664
- 22.2 Mutagenesis Screens 665
- 22.3 Determining Where and When Genes Act 671
- 22.4 Ordering Genes in a Pathway 674
- 22.5 A Comprehensive Example: Body Plan Development in *Drosophila* 675

chapter 23**The Genetics of Cancer 699**

- 23.1 Characteristics of Cancer Cells 700
- 23.2 The Genetic Basis of Cancers 702
- 23.3 How Cell Division Is Normally Controlled 705
- 23.4 How Mutations Cause Cancer 711
- 23.5 Personalized Cancer Treatment 717

■ *Tools of Genetics: Analysis of Cell-Cycle Mutants in Yeast* 709

PART VII

Frank Kraemer/Radius Images/Getty Images

Beyond the Individual Gene and Genome 730**chapter 24****Variation and Selection in Populations 730**

- 24.1 The Hardy-Weinberg Law: Predicting Genetic Variation in "Ideal" Populations 731
- 24.2 What Causes Allele Frequencies to Change in Real Populations? 737
- 24.3 Ancestry and the Evolution of Modern Humans 748

chapter 25**Genetic Analysis of Complex Traits 764**

- 25.1 Heritability: Genetic Versus Environmental Influences on Complex Traits 765
- 25.2 Mapping Quantitative Trait Loci (QTLs) 774

■ *Tools of Genetics: The Chi-Square Test for Independence* 781

Guidelines for Gene Nomenclature A-1

Brief Answers to Odd-Numbered Problems B-1

Glossary G-1

Index I-1
