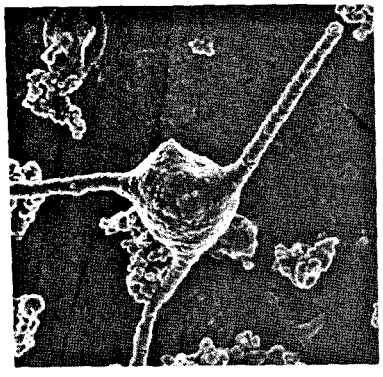
About the Authors xxxiv



PART 1
The Microbial Cell

CHAPTER 1
Microbial Life: Origin and Discovery 1

1.1 From Germ to Genome: What Is a Microbe? 2
1.2 Microbes Shape Human History 7
1.3 Medical Microbiology 15
Special Topic 1 An mRNA Vaccine for COVID-19 20
1.4 Environment and Ecology 23
1.5 The Microbial Family Tree 28
1.6 Cell Biology and the DNA Revolution 31
eResearch Activity 1 Do Bacteria Make Neurotransmitters for the Human Brain?

CHAPTER 2
Observing the Microbial Cell 39

2.1 Observing Microbes 40
2.2 Optics and Properties of Light 45
2.3 Bright-Field Microscopy and Phase-Contrast Microscopy 48
2.4 Fixation and Staining for Bright-Field Microscopy 54
2.5 Fluorescence Microscopy, FISH, and Chemical Imaging Microscopy 57
Special Topic 2 Biogeography of a Gut Pathogen 64
2.6 Electron Microscopy, Scanning Probe Microscopy, and X-Ray Crystallography 67
eResearch Activity 2 How Do Bacteria Make a Magnet Chain?

CHAPTER 3
Cell Structure and Function 79

3.1 The Bacterial Cell: An Overview 80
3.2 Membrane Molecules and Transport 87
3.3 The Envelope and Cytoskeleton 92
3.4 Bacterial Cell Division 103
3.5 Cell Asymmetry, Membrane Vesicles, and Extensions 108
Special Topic 3 Bacteria Reach Out with Pearling Tubes and Nanopods 114
3.6 Specialized Structures 114
eResearch Activity 3 How Do a Hundred Cells Divide at Once?

CHAPTER 4
Bacterial Culture, Growth, and Development 123

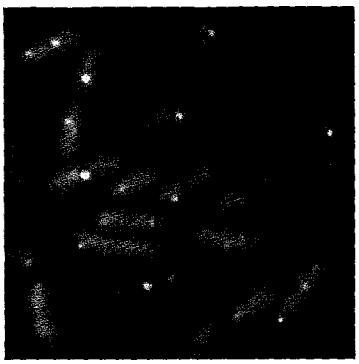
4.1 Microbial Nutrition 124
4.2 Nutrient Uptake 129
4.3 Culturing and Counting Bacteria 135
Special Topic 4 Factors from a Marine Sponge That Resuscitate "Microbial Dark Matter" 142
4.4 The Growth Cycle 146
4.5 Biofilms 153
4.6 Cell Differentiation 158
eResearch Activity 4 Can Bacteria Unite to Defeat Predators?

CHAPTER 5
Environmental Influences and Control of Microbial Growth 165

5.1 Extremophiles and the Constraints of Temperature and Pressure 166
5.2 Osmolarity and Halophiles 173
5.3 Hydronium (pH) and Hydroxide Ion Concentrations 175
5.4 Oxygen 179
5.5 Starvation and Eutrophication 183
5.6 Physical, Chemical, and Biological Control of Microbes 186
Special Topic 5 Phage Plus Antibiotics: A One-Two Punch against Bacterial Infections? 196
eResearch Activity 5 Can Microbes Survive Trapped for 100 Million Years beneath a Seabed?

CHAPTER 6
Viruses 201

6.1 Viruses in Ecosystems 202
6.2 Virus Structure 210
6.3 Viral Genomes and Classification 216
6.4 Bacteriophages: The Gut Virome 222
6.5 Coronavirus SARS-CoV-2 and Other Viral Pathogens 229
Special Topic 6 Found in Ferrets: Air Currents Carry SARS-CoV-2 232
6.6 Culturing Viruses 242
eResearch Activity 6 Muddy and ZoeJ: Can Phages Discovered by Undergraduates Save a Patient's Life?



PART 2
Genes and Genomes

CHAPTER 7
Genomes and Chromosomes 249

7.1 DNA: The Genetic Material 250
7.2 Genome Organization 250
Special Topic 7 DNA as Digital Storage 256
7.3 DNA Replication 260
7.4 Plasmids and Secondary Chromosomes 270
7.5 Eukaryotic and Archaeal Chromosomes 275
7.6 Microbiomes and Metagenomes 277
eResearch Activity 7 Can Single-Cell Genomics Reveal Prebiotic Consumers of the Gut Microbiome?

CHAPTER 8
Transcription, Translation, and Protein Processing 287

8.1 From DNA to RNA to Protein 288
8.2 Transcription of DNA to RNA 289
8.3 Translation of RNA to Protein 298
Special Topic 8 Rewriting the Genetic Code to Arrest Viral Infection 312
8.4 Protein Modification, Folding, and Degradation 314
8.5 Secretion: Protein Traffic Control 318
eResearch Activity 8 How Do Cells of the Same Species Recognize Each Other for DNA Exchange?

CHAPTER 9
Genetic Change and Genome Evolution 327

9.1 Mutations 328
9.2 DNA Repair 334
9.3 Gene Transfer Mechanisms 340
9.4 Mobile Genetic Elements 350
9.5 Genome Evolution 355
Special Topic 9 Gut Microbiome Caught in the Act of Gene Transfer 362
eResearch Activity 9 How Do Mobile Genomic Islands Exploit Incoming Plasmids for Their Ticket to New Hosts?

CHAPTER 10

Molecular Regulation 369

10.1 Transcription Repressors and Activators 370
10.2 Alternative Sigma Factors and Anti-Sigma Factors 382
10.3 Regulation by RNA 384
10.4 Second Messengers 392
10.5 Clocks, Thermometers, and Switches 400
Special Topic 10 Inteins, Exteins, and "Spliced-Up" Regulation 402
eResearch Activity 10 How Do Colonizing Symbiotic Bacteria Tell Their Hosts to Shut the Door Behind Them?

CHAPTER 11

Viral Molecular Biology 411

11.1 Phage Lambda: Enteric Bacteriophage 412
11.2 Influenza Virus: (–) strand RNA Virus 421
Special Topic 11 Designing a Pandemic Flu 428
11.3 Human Immunodeficiency Virus (HIV): Retrovirus 432
11.4 Endogenous Retroviruses and Lentiviral Gene Therapy 443
11.5 Herpes Simplex Virus: DNA Virus 448
eResearch Activity 11 Could a Lentiviral Vector with CRISPR Cure Herpes?

CHAPTER 12

Molecular Complexity and Synthetic Biology 457

12.1 Chemotaxis: Movement with a Destination 458
12.2 Biofilm Formation by *Pseudomonas aeruginosa* 463
12.3 CRISPR and Other Antiphage Defenses 469
12.4 Synthetic Biology: Biology by Design 481
Special Topic 12 Constructing the Smallest Genome for Cellular Life 484
eResearch Activity 12 Can Phage Jam a Host's Communications to Block Antiphage Defense?

PART 3
Metabolism and Biochemistry

CHAPTER 13
Energetics and Catabolism 493

13.1 Energy for Life 494
13.2 Energy Carriers and Electron Transfer 501
13.3 Catabolism: The Microbial Buffet 509
13.4 Glucose Fermentation and Respiration 514
13.5 Our Gut Microbiome: Friends with Benefits 529
Special Topic 13 Gut Bacteria Guide Host Behavior 530
13.6 Aromatic Catabolism and Syntrophy 534
eResearch Activity 13 Can *Escherichia coli* with a Rat Enzyme Convert Used Plastic Bottles to Vanillin?

CHAPTER 14
Electron Flow in Organotrophy, Lithotrophy, and Phototrophy 543

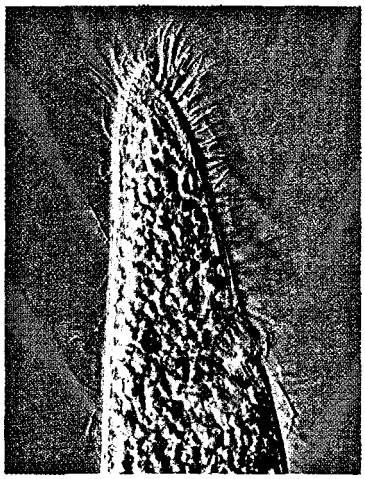
14.1 Electron Transport Systems and the Proton Motive Force 544
14.2 The Respiratory ETS and ATP Synthase 555
14.3 Anaerobic Respiration 562
14.4 Nanowires, Electron Shuttles, and Fuel Cells 564
14.5 Lithotrophy and Methanogenesis 569
Special Topic 14 Bacteria with "Locs" Rule the Bay 570
14.6 Phototrophy 578
eResearch Activity 14 Can Silver Extensions Amplify Bacterial Electricity?

CHAPTER 15
Biosynthesis 591

15.1 Overview of Biosynthesis 592
15.2 CO_2 Fixation: The Calvin Cycle and Other Pathways 596
Special Topic 15 Sunlight Makes Industrial Chemicals 604
15.3 Fatty Acids and Antibiotics 607
15.4 Nitrogen Fixation and Regulation 614
15.5 Amino Acids and Nucleobases 619
eResearch Activity 15 How Does Coculture Reveal a New Antibiotic from Sea Squirt Bacteria?

CHAPTER 16
Food and Industrial Microbiology 629

16.1 Microbial Foods 630
16.2 Acid-Fermented and Alkali-Fermented Foods 635
16.3 Ethanolic Fermentation: Bread and Wine 642
16.4 Food Spoilage and Preservation 646
16.5 Industrial Microbiology 656
Special Topic 16 Microbial Vitamins for Sale 658
16.6 Vaccines and Gene Therapy Vectors 665
eResearch Activity 16 How Did Microbial Enzymes Make the First COVID-19 Drug?



PART 4
Microbial Diversity and Ecology

CHAPTER 17
Origins and Evolution 673

17.1 Origins of Life 674
17.2 Forming the First Cells 683
17.3 Evolution: Phylogeny and Gene Transfer 686
17.4 Natural Selection and Adaptation 695
Special Topic 17 A Giant Petri Dish and the Race to Drug Resistance 696
17.5 Microbial Species and Taxonomy 705
17.6 Symbiosis and the Origin of Mitochondria and Chloroplasts 709
eResearch Activity 17 Does a Food Preservative Select for Stress-Induced Mutations?

CHAPTER 18
Bacterial Diversity 715

18.1 Bacterial Diversity at a Glance 716
18.2 Cyanobacteria: Oxygenic Phototrophs 723
18.3 Firmicutes, Mycoplasma, and Actinobacteria 728
Special Topic 18 Gut Bacterial Hairballs 732
18.4 Proteobacteria: From Photoheterotrophs to Lithotrophs 741
18.5 Spirochetes, Acidobacteria, Bacteroidetes, and Chlorobi 755
18.6 Planctomycetes, Verrucomicrobia, and Chlamydiae 758
eResearch Activity 18 Do Fecal Firmicutes Rewrite the Genetic Code?

CHAPTER 19
Archaeal Diversity 763

19.1 Archaeal Diversity at a Glance 764
19.2 TACK Hyperthermophiles Eat Sulfur 772
19.3 Thaumarchaeota: Ammonia Oxidizers and Animal Symbionts 779
Special Topic 19 Ammonia-Oxidizing Archaea Keep Your Fish Healthy 782
19.4 Euryarchaeota: Methanogens from Gut to Globe 784
19.5 Haloarchaea and Other Euryarchaeotes: Underground and Under Ocean 791
19.6 DPANN Symbionts, Altiarchaeales, and Asgard: Branch to Eukaryotes 797
eResearch Activity 19 Can an Archaeal Fuel Cell Make Electric Current in Boiling Water?

CHAPTER 20
Eukaryotic Diversity 803

20.1 Phylogeny of Eukaryotes 804
20.2 Fungi 812
Special Topic 20 Yeast: A Single-Celled Human Brain 816
20.3 Amoebozoa: Amebas and Slime Molds 824
20.4 Algae 828
20.5 Alveolates: Ciliates, Dinoflagellates, and Apicomplexans 835
20.6 Parasitic Protozoa and Microscopic Animals 842
eResearch Activity 20 Can Coral Endosymbiotic Algae Adapt to Rising Heat?

CHAPTER 21
Microbial Ecology 849

21.1 Microbial Communities: Omics Analysis 850
21.2 Functional Ecology: Microbial Culture and Abiotic Factors 861
21.3 Symbiosis 869
21.4 Animal Digestive Microbiomes 876
21.5 Marine and Freshwater Microbes 883
Special Topic 21 Marine Biofilm Bacteria Eat Plasticizers 890
21.6 Soil and Plant Microbial Communities 896
eResearch Activity 21 What Builds Hedgehogs and Corncobs on Your Teeth?

CHAPTER 22
Element Cycles and Environmental Microbiology 909

22.1 The Carbon Cycle and Climate Change 910
22.2 The Hydrologic Cycle and Wastewater Treatment 921
22.3 The Nitrogen Cycle 927
22.4 Sulfur, Phosphorus, and Metals 933
22.5 Our Built Environment 939
Special Topic 22 A Microbial Jungle in a Kitchen Sponge 942
22.6 Astrobiology 945
eResearch Activity 22 Look Up: Can We See Life on Distant Planets?

PART 5
Medicine and Immunology

CHAPTER 23
The Human Microbiome and Innate Immunity 953

23.1 The Human Microbiome 954
23.2 Benefits and Risks of Microbiota 963
23.3 Overview of the Immune System 970
Special Topic 23 Why Do Tattoos Last Forever? 976
23.4 Physical and Chemical Defenses against Infection 980
23.5 Innate Immunity: Surveillance, Cytokines, and Inflammation 984
23.6 Complement and Fever 993
eResearch Activity 23 Can Altering the Gut Microbiome Affect Memory?

CHAPTER 24
The Adaptive Immune Response 999

24.1 Overview of Adaptive Immunity 1000
24.2 Antibody Structure, Diversity, and Synthesis 1006
24.3 T Cells Link Antibody and Cellular Immune Systems 1018
24.4 Complement as Part of Adaptive Immunity 1030
24.5 Gut Mucosal Immunity and the Microbiome 1032
24.6 Immunization 1035
24.7 Hypersensitivity and Autoimmunity 1039
Special Topic 24 A Monoclonal Magic Bullet for Ebola? 1040
eResearch Activity 24 Can a Subset of Regulatory T Cells Prevent Allergies and Autoimmunity?

CHAPTER 25
Pathogenesis 1051

25.1 Host-Pathogen Interactions 1052
25.2 Microbial Attachment: First Contact 1061
25.3 Toxins Subvert Host Functions 1066
Special Topic 25 Chronic Staph Infections Work with a NET 1070
25.4 Deploying Toxins and Effectors 1078
25.5 Surviving within the Host 1082
25.6 Tools Used to Probe Pathogenesis 1095
eResearch Activity 25 Why Does *Shigella* "Prefer" Humans and Gorillas over Other Mammals?

CHAPTER 26
Microbial Diseases 1101

26.1 Basics of Diagnosis and Infections of Skin, Soft Tissue, and Bone 1102
26.2 Respiratory Tract Infections 1109
26.3 Gastrointestinal Tract Infections 1120
26.4 Genitourinary Tract Infections 1132
26.5 Cardiovascular and Systemic Infections 1142
Special Topic 26 How Neutrophils Ambush *Staphylococcus aureus* in a Lymph Node 1144
26.6 Central Nervous System Infections 1154
eResearch Activity 26 Can a Microbiome "Learn" from an Infection?

CHAPTER 27
Antimicrobial Therapy and Discovery 1165

27.1 Fundamentals of Antimicrobial Therapy 1166
27.2 Antibiotic Mechanisms of Action 1173
27.3 Challenges of Drug Resistance and Discovery 1185
Special Topic 27 Artificial Intelligence Tackles the Superbug Threat 1198
27.4 Antiviral Agents 1201
27.5 Antifungal Agents 1209
eResearch Activity 27 Can a Selective, Narrow-Spectrum Antibiotic for Lyme Disease Be Found?

CHAPTER 28
Clinical Microbiology and Epidemiology 1215

28.1 Clinical Specimen Collection and Handling 1216
28.2 Pathogen Identification by Culture and Phenotype 1222
28.3 Molecular and Serological Identification of Pathogens 1230
Special Topic 28 Next-Generation Diagnostics: CRISPR Launches a "Flare" 1236
28.4 Epidemiology 1244
28.5 Detecting Emerging Microbial Diseases 1251
28.6 Infectious Disease and Health Disparities 1259
eResearch Activity 28 How Does SARS-CoV-2 Evolve in the Human Host?

Glossary G-1
Credits C-1
Index I-1
