Contents

Preface	xi
Acknowledgments	xii
Chapter 1. Shuffling cards: An introduction	1
1.1. Riffle shuffling and total variation	1
1.2. The problem, its motivation, and some theorems	3
1.3. Outline of the book	5
1.4. Background for reading this book	8
Chapter 2. Practice and history of shuffling cards	11
2.1. Illustrations of some shuffles	11
2.2. Some early history	20
Chapter 3. Convergence rates for riffle shuffles	25
3.1. Basic properties of riffle shuffling	25
3.2. Total variation and relative entropy	30
3.3. Effect of cuts	31
3.4. Guessing strategies and games	34
3.5. Strong uniform times and separation distance	39
3.6. Coupling and riffle shuffles	43
3.7. Appendix: Distances between probability distributions	47
Chapter 4. Features	51
4.1. A single card	52
4.2. Shuffling with repeated cards	54
4.3. Different methods of dealing	58
4.4. Cycle structure, random polynomials, and Lie theory	62
4.5. Inversions	67
4.6. RSK shape, shuffling, and character theory of S_∞	68
4.7. The sign function	75
4.8. Other techniques	78
Chapter 5. Eigenvectors and Hopf algebras	81
5.1. Overview	81
5.2. Combinatorics of words	83
5.3. The main theorem	84
5.4. Hopf algebras and Markov chains	86
5.5. Restriction/induction (with shuffling and Hopf algebras)	89
5.6. Shuffling and Hochschild homology	91
5.7. Appendix 1: Uses for eigenvectors	93
5.8. Appendix 2: Eigenvectors in this book	97

Chapter 6. Shuffling and carries	99
6.1. Introduction to carries	99
6.2. Connection with riffle shuffles	102
6.3. A bit of why	103
6.4. Convergence rates of the carries chain	105
6.5. Eigenvalues and eigenvectors of the carries chain	107
6.6. Balanced carries	112
6.7. Carries, number theory, and fractals	116
6.8. Other connections	121
6.9. Appendix: Some proofs	123
Chapter 7. Different models for riffle shuffling	127
7.1. Perfect shuffles	127
7.2. Thorp shuffle	136
7.3. Neat and clumpy shuffles: The Markov model	138
7.4. Dynamical systems and work of Lalley	140
7.5. Shuffling big decks	140
Chapter 8. Move-to-front shuffling and variations	147
8.1. Coupling and convergence rates for the move-to-front shuffle	148
8.2. Formula for move-to-front shuffle	149
8.3. Spectral aspects of the move-to-front shuffle	151
8.4. Statistics of features after iterations of top-to-random shuffle	153
8.5. Weighted move to front and the Plackett-Luce model	155
8.6. Move-to-front shuffle with Markov dependent requests	157
8.7. Move to root for binary search trees	159
8.8. Connection with Stein's method	161
8.9. Random-to-random shuffle	163
Chapter 9. Shuffling and geometry	165
9.1. Hyperplane arrangements and random walks	166
9.2. Examples	167
9.3. General theory of hyperplane walks	171
9.4. An analog of riffle shuffling for general hyperplane arrangements	176
9.5. Stationary distribution, eigenfunctions, and lumped chains	179
9.6. Extensions	183
9.7. Connections and unification	191
9.8. Adjacent transpositions	193
9.9. Research problems	193
9.10. Appendix: Some proofs	194
Chapter 10. Shuffling and algebraic topology	199
10.1. A topology teaser	199
10.2. First steps: Homology	200
10.3. Triangulating a product of simplices (and shuffling)	202
10.4. The Künneth formula	204
10.5. Translating shuffling theorems into homology	204
10.6. A different application of shuffling to topology	207
10.7. Final remarks	208

Chapter 11. Type B shuffles and shelf-shuffling machines	209
11.1. Models of Type B shuffles	209
11.2. Cycle structure and RSK shape	211
11.3. Shelf shufflers	215
11.4. Other types	219
11.5. Research problems	222
11.6. Appendix: Proof of Proposition 11.3.2	223
Chapter 12. Descent algebras, P -partitions, and quasisymmetric functions	225
12.1. Descent theory	225
12.2. P -partitions and shuffling	230
12.3. Quasisymmetric functions and shuffles with biased cuts	238
12.4. Algebras of shuffles	244
12.5. A strange inequality	245
12.6. And then . . .	247
Chapter 13. Overhand shuffling	249
13.1. Introduction to the overhand shuffle	249
13.2. Mathematical models	250
13.3. Some theorems	252
13.4. Entertaining (and cheating) with overhand shuffles	254
13.5. The over-under shuffle	260
13.6. Coupling and the coin tossing model	261
13.7. Braid arrangement and overhand shuffles	266
13.8. Interval exchange maps and overhand shuffles	267
Chapter 14. “Smooosh” shuffle	271
14.1. Introduction	271
14.2. Tests of mixing for smooosh shuffles	272
14.3. A mathematical model for spatial mixing	274
14.4. Some analysis	277
14.5. Bells, whistles, and computer implementation	280
14.6. A different model for spatial mixing	281
14.7. Combining shuffles and some practical tests	284
Chapter 15. How to shuffle perfectly (randomly)	287
Chapter 16. Applications to magic tricks, traffic merging, and statistics	295
16.1. Rising sequences	295
16.2. The Gilbreath principle	297
16.3. Tops and bottoms are special	298
16.4. A performable magic trick	298
16.5. A homework problem	299
16.6. Riffle stacking	300
16.7. Close stays close	301
16.8. Reds and blacks	301
16.9. Overhand shuffle	301
16.10. Smooshing	302
16.11. An application of shuffling to cars merging in traffic	303
16.12. Statistics of permutations	304

Chapter 17. Shuffling and multiple zeta values	307
17.1. Multiple zeta values	307
17.2. A bit of proof	313
17.3. Chen's integrals	316
17.4. Periods	318
Bibliography	321
Index	341
