Continuous Parameter Markov Processes and Stochastic Differential Equations

Springer

Contents

1	A Review of Martingales, Stopping Times, and the Markov Property	1
	Exercises	15
2	Semigroup Theory and Markov Processes	17
	Exercises	33
3	Regularity of Markov Process Sample Paths	35
	Exercises	39
4	Continuous Parameter Jump Markov Processes	41
	Exercises	59
5	Processes with Independent Increments	65
	Exercises	95
6	The Stochastic Integral	99
	Exercises	111
7	Construction of Diffusions as Solutions of Stochastic Differential Equations	115
7.1	Construction of One-Dimensional Diffusions	116
7.2	Extension to Multidimensional Diffusions	122
7.3	An Extension of the Itô Integral & SDEs with Locally Lipschitz Coefficients	126
7.4	Strong Markov Property	131
7.5	An Extension to SDEs with Nonhomogeneous Coefficients	133
7.6	An Extension to k -Dimensional SDE Governed by r -Dimensional Brownian Motion	134
	Exercises	135
8	Itô's Lemma	139
8.1	Asymptotic Properties of One-Dimensional Diffusions: Transience and Recurrence	152
	Exercises	157

9	Cameron–Martin–Girsanov Theorem	159
	Exercises	175
10	Support of Nonsingular Diffusions	179
	Exercises	182
11	Transience and Recurrence of Multidimensional Diffusions	185
	Exercises	209
12	Criteria for Explosion	211
	Exercises	217
13	Absorption, Reflection, and Other Transformations of Markov Processes	219
	13.1 Absorption	221
	13.2 General One-Dimensional Diffusions on Half-Line with Absorption at Zero	224
	13.3 Reflecting Diffusions	230
	Exercises	236
14	The Speed of Convergence to Equilibrium of Discrete Parameter Markov Processes and Diffusions	239
	Exercises	270
15	Probabilistic Representation of Solutions to Certain PDEs	273
	15.1 Feynman–Kač Formula for Multidimensional Diffusion	277
	15.2 Kolmogorov Forward Equation (The Fokker–Planck Equation) ...	280
	Exercises	283
16	Probabilistic Solution of the Classical Dirichlet Problem	287
	Exercises	297
17	The Functional Central Limit Theorem for Ergodic Markov Processes	299
	17.1 A Functional Central Limit Theorem for Diffusions with Periodic Coefficients	308
	Exercises	316
18	Asymptotic Stability for Singular Diffusions	317
	Exercises	327
19	Stochastic Integrals with L^2-Martingales	329
	Exercises	342
20	Local Time for Brownian Motion	345
	Exercises	352
21	Construction of One-Dimensional Diffusions by Semigroups	355
	Exercises	395

22	Eigenfunction Expansions of Transition Probabilities for One-Dimensional Diffusions	401
	Exercises	408
23	Special Topic: The Martingale Problem	411
	Exercises	418
24	Special Topic: Multiphase Homogenization for Transport in Periodic Media	421
	Exercises	442
25	Special Topic: Skew Random Walk and Skew Brownian Motion	445
	Exercises	460
26	Special Topic: Piecewise Deterministic Markov Processes in Population Biology	463
	Exercises	474
A	The Hille–Yosida Theorem and Closed Graph Theorem	477
	References	483
	Related Textbooks and Monographs	491
	Symbol Index	495
	Author Index	497
	Subject Index	501
