

Probing the CPEB3 Ribozyme Structure by Nuclear Magnetic Resonance

Dissertation

zur

**Erlangung der naturwissenschaftlichen Doktorwürde
(Dr. sc. nat.)**

vorgelegt der

Mathematisch-naturwissenschaftlichen Fakultät

der

Universität Zürich

von

Irina Kalb

aus

Israel

Promotionskommission

Prof. Dr. Roland K.O. Sigel (Vorsitz)

Prof. Dr. Oliver Zerbe

Prof. Dr. Michael Kovermann

Zürich 2023

Table of Contents

Abstract.....	11
1 Introduction	15
1.1 General historical discoveries in nucleic acids.....	17
1.2 Nucleic acids. From DNA to RNA and proteins.....	19
1.3 Structure of RNA.....	21
1.4 Non-coding RNAs	25
1.5 Ribozymes – RNA with self-catalytic activity.....	27
1.5.1 Small ribozymes	27
1.5.2 Large ribozymes	31
1.5.3 List of confirmed classes of ribozymes	33
1.6 HDV ribozyme	36
1.6.1 Proton transfer in HDV ribozyme	39
1.6.2 Attempt to capture the HDV pre-cleaved state.....	40
1.6.3 HDV-like self-cleaving ribozymes.....	41
1.6.4 CPEB3 ribozyme	44
Project aims	49
2.1 Determination of the pK _a value	51
2.2 NMR structure of the CPEB3 ribozyme.....	52
2.3 Application of ¹⁹ F NMR methodology	54
Experimental part	55
3.1 NMR study of RNA.....	57
3.1.1 Chemical shift ranges in RNA.....	57
3.1.2 Methods and approaches for the assignment of RNA resonances.....	59
3.1.3 Complications of NMR study of RNA	64
3.1.4 Structure calculation of RNA	66
3.2 Experiment description.....	72

3.2.1	RNA preparation.....	72
3.2.2	Determination of the pK _a value in NMR.....	74
3.2.3	Study of the ¹⁹ F Uracil labeled CPEB3 ribozyme by ¹⁹ F NMR spectroscopy.....	77
3.2.4	Theory of the T1 relaxation time measurement of the 5F-U-labeled CPEB3 ribozyme.....	80
3.3	Previous work done on the pt.CPEB3txn ribozyme in the laboratory.....	86
3.3.1	Assignment of the P2 helical region.....	87
3.3.2	Assignment of the selectively labeled CPEB3 ribozyme.....	102
4	Results.....	109
4.1	Determination of the pK _a value of the C57.....	111
4.1.1	pH-titrations of the pt.CPEB3txn ¹³ C, ¹⁵ N-Cytosine labeled sample in the absence and in the presence of 5 mM MgCl ₂	111
4.2	Redefining of the investigated construct.....	117
4.3	Search for the new investigating construct.....	119
4.3.1	First transcription conditions optimization for the extended construct.....	119
4.3.2	Second adjustment of transcription trials for the extended CPEB3 ribozyme with the inhibitor strand.....	122
4.3.3	Third adjustment of transcription trials for the CPEB3 cleaved ribozyme.....	128
4.4	¹ H NMR spectroscopy.....	130
4.4.1	Approach for the assignment of the full-length pt.CPEB3cl structure.....	130
4.4.2	Imino-NOESY.....	132
4.4.3	[¹ H, ¹ H]-TOCSY.....	148
4.4.4	Additional spectra aiding to the assignments of non-exchangeable protons in the [¹ H, ¹ H]-NOESY.....	161
4.4.5	[¹ H, ¹ H]-NOESY.....	168
4.4.6	Special correlations.....	174
4.5	¹⁹ F NMR spectroscopy.....	184
4.5.1	Study of the cleavage rate difference of the natural abundance and the 5F-U-labeled pt.CPEB3cl samples.....	186

4.5.2	Study of the temperature influence on the 1D 5F-U-labeled pt.CPEB3cl sample ..	188
4.5.3	Assignments of the helical regions in the [¹ H, ¹ H]-NOESY spectrum of the 5F-U-labeled pt.CPEB3cl sample	191
4.5.4	NMR study of the 5-fluorouracil	193
4.5.5	NMR study of 5F-U-labeled pt.CPEB3cl ribozyme.....	196
4.5.6	T1 relaxation time measurement of the 5F-U-labeled pt.CPEB3cl sample	200
4.5.7	pH-titrations of the 5F-U-labeled pt.CPEB3cl sample	204
4.6	Structure calculation	207
5	Summary and outlook.....	213
6	Appendix	219
6.1	List of Abbreviations	221
6.2	Distance and dihedral angle restraints for the structure calculation of the pan troglodytes CPEB3 cleaved ribozyme	223
6.3	List of Figures.....	252
	CURRICULUM VITAE.....	281
