

**Probing Dynamics at Different Time Scales: an
Investigation of Electron and Nuclei Behavior
Through Density Functional Theory**

Dissertation
zur
Erlangung der naturwissenschaftlichen Doktorwürde
(Dr. sc. nat.)
vorgelegt der
Mathematisch-naturwissenschaftlichen Fakultät
der
Universität Zürich
von
Fernanda Brandalise Nunes
aus
Brasilien

Promotionkommission
Prof. Dr. Jürg Hutter (Vorsitz)
Prof. Dr. Marcella Mauri-Iannuzzi (Leitung)
Prof. Dr. Johan Chang

Zürich, 2023

Contents

1	Introduction	1
1.1	Brief history	1
1.2	Dynamical phenomena	2
2	Computational methods	7
2.1	The molecular Hamiltonian	7
2.2	Time-independent Density Functional theory	8
2.3	<i>Ab initio</i> Molecular Dynamics	17
2.3.1	Born–Oppenheimer Molecular Dynamics	18
2.3.2	Metadynamics	21
2.4	Real-time time-dependent Density Functional theory	24
3	Dynamic Equilibrium at the HCOOH-Saturated TiO₂(110)–Water Interface	29
3.1	Introduction	29
3.2	Experimental details	31
3.3	Computational methods	32
3.4	Results and Discussion	36
3.4.1	Experimental data analysis	36
3.4.2	Computational analysis	40
3.5	Conclusion	46
4	X-ray absorption spectroscopy by means of RT-TDDFT	47
4.1	Computational Methodology	47
4.2	Results	49
4.2.1	Time step	50
4.2.2	Total simulation time	51
4.2.3	Applied electric field intensity	52
4.2.4	Real-time propagation vs. linear response	53
4.3	Conclusions	55
4.3.1	Simulation protocol	56

5 X-ray induced ultrafast charge transfer in thiophene-based conjugated polymers controlled by core-hole clock spectroscopy	59
5.1 Introduction	59
5.2 Experimental details	62
5.3 Theory	63
5.3.1 Core-hole clock spectroscopy	63
5.3.2 Computational methods	65
5.4 Results and Discussion	67
5.4.1 Experimental data analysis	67
5.4.2 Computational analysis	72
5.5 Conclusion	77
6 Conclusion	81
References	83
