

# **The Ethereum Ecosystem from a Transaction Network Perspective**

**Dissertation  
submitted to the  
Faculty of Business, Economics and Informatics  
of the University of Zurich**

to obtain the degree of  
Doktor der Wirtschaftswissenschaften, Dr. oec.  
(corresponds to Doctor of Philosophy, PhD)

presented by

Francesco Maria De Collibus  
from Italy

approved in April 2024 at the request of

Prof. Dr. Claudio J. Tessone  
Prof. Dr. Guido Caldarelli  
Prof. Dr. Karl Schmedders

# Table of Contents

<b>I</b>	<b>Introduction and Summary</b>	<b>1</b>
<b>1</b>	<b>Introduction</b>	<b>2</b>
1.1	Introduction . . . . .	2
1.1.1	The Cambrian Explosion of Blockchain Technology . . . . .	3
1.1.2	Blockchain: Definition and Functionality . . . . .	4
1.1.3	Zero Trust: a Brief Philosophy of Blockchain . . . . .	5
1.1.3.1	Trustless and Trust of our gnoseology . . . . .	7
1.1.3.2	Trust and Trustlessness as Social Constructs . . . . .	8
1.1.3.3	Trust and Trustlessness in Computer Security . . . . .	9
1.1.3.4	A Spurious Social Correlation: The Dangerous Crusade Against Trust . . . . .	10
1.1.3.5	Centralisation and the Need for Trust are Inseparable . . . . .	12
1.1.4	Ethereum: A Distributed System and Its Consensus Mechanism . . . . .	12
1.1.5	ERC-20 Token Specification and Its Impact on Ethereum’s Ecosystem	13
1.1.6	Network Science: A Prism for Analysing Blockchain Systems . . . . .	15
1.1.7	Understanding Power Law Distributions in the Ethereum Ecosystem .	16
1.1.8	Data Mining and Labeling . . . . .	17
1.2	Research Questions and Contributions . . . . .	18
<b>2</b>	<b>Summary &amp; Research Approach</b>	<b>20</b>
2.1	Research Approach . . . . .	20
2.2	Part II - The Network Perspective . . . . .	21

2.3	Part III - The Ethereum Token network . . . . .	22
2.4	Part IV - Applications . . . . .	25
2.5	Research Design . . . . .	26
2.6	Writing Style . . . . .	27
<b>II</b>	<b>The Network Perspective</b>	<b>28</b>
<b>3</b>	<b>The Evolution of Centralisation</b>	<b>29</b>
3.1	Introduction . . . . .	29
3.2	Results . . . . .	31
3.2.1	Clustering matters. . . . .	31
3.2.2	Degree distributions. . . . .	33
3.2.3	Core-periphery structure. . . . .	35
3.2.4	Mining concentration. . . . .	36
3.2.5	Wealth inequality and spatial distribution. . . . .	37
3.3	Discussion . . . . .	39
3.3.1	Data. . . . .	40
3.3.2	Address clustering in UTXO blockchains. . . . .	41
3.3.3	Transaction networks. . . . .	43
3.4	Supplementary Information: Robustness to address clustering . . . . .	43
<b>4</b>	<b>Heterogeneous Preferential Attachment in Key Ethereum-Based Cryptoassets</b>	<b>48</b>
4.1	Introduction . . . . .	48
4.2	Related Literature . . . . .	50
4.3	Data description . . . . .	52
4.4	Methodology . . . . .	55
4.4.1	The Ethereum network . . . . .	55
4.4.2	Identification of the preferential attachment type . . . . .	57
4.5	Emergent Distributions . . . . .	58

4.5.1	Wealth distribution . . . . .	58
4.5.2	Evolution of basic statistics . . . . .	59
4.5.3	Degree distributions . . . . .	62
4.6	Preferential Attachment . . . . .	65
4.7	Conclusions . . . . .	72

### **III The ERC-20 Token Network 76**

#### **5 The structural role of smart contracts and exchanges in the centralisation of Ethereum-based cryptoassets 77**

5.1	Introduction . . . . .	77
5.2	Materials and Methods . . . . .	79
5.2.1	Four tokens used as DeFi collateral . . . . .	79
5.2.2	Transaction networks in blockchain . . . . .	81
5.2.3	Deep dive: network construction . . . . .	81
5.2.4	Preferential attachment . . . . .	82
5.2.5	Deep dive methodology . . . . .	83
5.2.6	Multilayer network-based methodology . . . . .	84
5.2.7	Bird's eye methodology . . . . .	85
5.3	Results . . . . .	87
5.3.1	In and out degree correlation . . . . .	87
5.3.2	Power law fit . . . . .	87
5.3.3	Preferential attachment . . . . .	87
5.3.4	Network dismantling . . . . .	88
5.3.5	Assortativity . . . . .	91
5.3.6	Multilayer network dismantling . . . . .	93
5.3.7	Bird's eye view of Ethereum-based tokens . . . . .	98
5.4	Discussion . . . . .	107

<b>6</b>	<b>Correlations and Centralisation in ERC-20 Tokens</b>	<b>110</b>
6.1	Introduction . . . . .	110
6.1.1	An introduction to ERC-20 Cryptoassets . . . . .	111
6.1.2	Literature and contribution . . . . .	112
6.2	Methodology . . . . .	113
6.2.1	Dataset . . . . .	113
6.3	Results . . . . .	114
6.3.1	Token network properties . . . . .	114
6.3.2	Correlation analysis . . . . .	114
6.3.3	Minimum Spanning Tree and labels . . . . .	116
6.3.4	ARMA Methods for transactions time series . . . . .	119
6.3.5	"Rich" tokens get richer . . . . .	122
6.4	Conclusions and Next Steps . . . . .	124
<b>IV</b>	<b>Additional Applications of the Network Approach</b>	<b>126</b>
<b>7</b>	<b>The Microvelocity of Money in Ethereum</b>	<b>127</b>
7.1	Introduction: Addressing the Problem of the Velocity of Money . . . . .	127
7.2	Blockchain and Ethereum . . . . .	129
7.3	MicroVelocity . . . . .	130
7.4	Data and methodologies . . . . .	132
7.4.1	Methodology . . . . .	132
7.4.2	Data . . . . .	135
7.5	Results . . . . .	135
7.5.1	Holding times . . . . .	136
7.5.2	Monthly snapshots . . . . .	136
7.5.2.1	Total Velocity . . . . .	136
7.5.2.2	Power Law Fits . . . . .	138

7.5.2.3	Top contributors to the velocity . . . . .	140
7.5.3	Network Analysis . . . . .	143
7.5.3.0.1	Core-periphery structure of the velocity of money . . . . .	145
7.5.4	Understanding the nature of top contributing addresses . . . . .	147
7.6	Velocity of ERC-20 Tokens . . . . .	150
7.7	Conclusions . . . . .	151

**V Discoverers 154**

**8 The Role of Discoverers in the Token Ecosystem 155**

8.1	Introduction . . . . .	156
8.2	Related literature . . . . .	158
8.2.1	Forecasting new product success from few customers . . . . .	159
8.2.2	Injection points for new products . . . . .	161
8.3	Data . . . . .	162
8.3.1	Recipe online community (ROC) . . . . .	162
8.3.2	Yelp . . . . .	163
8.3.3	Ethereum . . . . .	164
8.4	Discoverer detection . . . . .	166
8.4.1	How to detect a discoverer? . . . . .	166
8.4.2	Empirical evidence of the presence of few discoverers . . . . .	168
8.4.3	Empirical correlates of being a discoverer . . . . .	169
8.5	Few customers predict new product success . . . . .	172
8.5.1	Out-of-sample predictions with few customers' data . . . . .	172
8.5.2	Out-of-sample predictions with complete customer data . . . . .	175
8.6	Discoverers as injection points for new product diffusion . . . . .	177
8.6.1	Deriving hypotheses through agent-based simulations . . . . .	177
8.6.2	Overview of the experiments . . . . .	179

8.6.3	Stage 1: Seeding . . . . .	179
8.6.4	Stage 2: Diffusion . . . . .	182
8.7	Discussion . . . . .	184
8.8	Appendix A. Correlates of being a discoverer . . . . .	185
8.8.1	Centrality. . . . .	186
8.8.2	Influence. . . . .	186
8.8.3	Top-attributes adoption share. . . . .	186
8.8.4	Similarity. . . . .	187
8.8.5	Diversification. . . . .	187
8.9	Appendix B. Success prediction models and their evaluation . . . . .	187
8.9.1	Models based on few adopters . . . . .	187
8.9.2	Models based on all the adopters. . . . .	188
8.9.3	Model evaluation. . . . .	188
<b>VI</b>	<b>Conclusion and Outlook</b>	<b>190</b>
<b>9</b>	<b>Conclusion and Future Work</b>	<b>191</b>
9.1	Key Findings . . . . .	192
9.2	Outlook . . . . .	195
9.3	Limitations and Future Work . . . . .	196
